Subject: Deadline 13
Date: 16 July 2020 13:36:20

Dear ExA

Following last night's virtual OFH for Necton, here is my submission, which you asked me to send for deadline 13

Kwasi Kwateng launched the BEIS new review into offshore transmission connections on 15th July 2020

To quote two targets from the medium term workstream:

- to explore early opportunities for coordination through pathfinder projects, considering regulatory flexibility to allow developers to test innovative approaches*
- To focus primarily on projects expected to connect to the onshore network after **2025***

There is also a long term workstream for after 2030

Given Vanguard is on a 2025+ trajectory, and Boreas even later, will the developer will take advantage of this.
