Dear ExA

The applicant continues to insist that fires in substations do not happen, despite the facts showing the opposite.

Imagine if this happened to one the size of Vanguard.... <https://www.edp24.co.uk/news/ferry-inn-and-stokesby-homes-without-power-after-blaze-1-6794153> The wind would blow toxic smoke over residential areas. Which direction would they evacuate to? There are people all around the current proposed substation sites!

This happened today, 15th August 2020, in Norfolk and yet still the applicant will not tell us of any precautions for prevention, or evacuation. This leaving people in ignorance is surely unconscionable?
