

Ordnance Survey Plan

Published 1961

Source map scale - 1:10,000

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Gravesend

Published 1977

Source map scale - 1:10,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use. They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

10k Raster Mapping

Published 1999

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local

Published 2018

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Appendix E Envirocheck Report

Index Map

For ease of identification, your site and buffer have been split into Slices, Segments and Quadrants. These are illustrated on the Index Map opposite and explained further below.

Slice

Each slice represents a 1:10,000 plot area (2.7km x 2.7km) for your site and buffer. A large site and buffer may be made up of several slices (represented by a red outline), that are referenced by letters of the alphabet, starting from the bottom left corner of the slice "grid". This grid does not relate to National Grid lines but is designed to give best fit over the site and buffer.

Segment

A segment represents a 1:2,500 plot area. Segments that have plot files associated with them are shown in dark green, others in light blue. These are numbered from the bottom left hand corner within each slice.

Quadrant

A quadrant is a quarter of a segment. These are labelled as NW, NE, SW, SE and are referenced in the datasheet to allow features to be quickly located on plots. Therefore a feature that has a quadrant reference of A7NW will be in Slice A, Segment 7 and the NW Quadrant.

A selection of organisations who provide data within this report:

Envirocheck reports are compiled from 136 different sources of data.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In the attached datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Geology 1:50,000 Maps

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:50,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around the site. This mapping may be more up to date than previously published paper maps.

The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page. Not all layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

Artificial Ground and Landslip

Artificial ground is a term used by BGS for those areas where the ground surface has been significantly modified by human activity. Information about previously developed ground is especially important, as it is often associated with potentially contaminated material, unpredictable engineering conditions and unstable ground.

Artificial ground includes:

- Made ground - man-made deposits such as embankments and spoil heaps on the natural ground surface.
- Worked ground - areas where the ground has been cut away such as quarries and road cuttings.
- Infilled ground - areas where the ground has been cut away then wholly or partially backfilled.
- Landscaped ground - areas where the surface has been reshaped.
- Disturbed ground - areas of ill-defined shallow or near surface mineral workings where it is impracticable to map made and worked ground separately.

Mass movement (landslip) deposits on BGS geological maps are primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground. The dataset also includes foundered strata, where the ground has collapsed due to subsidence.

Superficial Geology

Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, the Quaternary, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and 'in place'. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

Bedrock and Faults

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults (e.g. normal, thrust), and thin beds mapped as lines (e.g. coal seam, gypsum bed). Some of these are linked to other particular 1:50,000 Geology datasets, for example, coal seams are part of the bedrock sequence, most faults and mineral veins primarily affect the bedrock but cut across the strata and post date its deposition.

Combined Surface Geology

The Combined Surface Geology map combines all the previous maps into one combined geological overview of your site.

Please consult the legends to the previous maps to interpret the Combined "Surface Geology" map.

Additional Information

More information on 1:50,000 Geological mapping and explanations of rock classifications can be found on the BGS website. Using the LEX Codes in this report, further descriptions of rock types can be obtained by interrogating the 'BGS Lexicon of Named Rock Units'. This database can be accessed by following the 'Information and Data' link on the BGS website.

Appendix F Walkover Photographic Plates

Plates

The photographs taken below are taken during PBA site walkovers on 5 March 2018. The locations and directions of these photos are shown on Figure 2 Site Location Plan.

REP

Plate 1 – Wetland Habitat Area, NE Corner

Plate 2 – Ash Container Storage Area

Plate 3 – Wasteland Habitat Area

Plate 4 – Former Ford Car Park - North

Plate 5 – Former Ford Car Park - South

Plate 6 – Portable Building Depot

Plate 7 – RRRF Maintenance Depot

Plate 8 – Partial view of the REP site

Plate 9 – Southern car park

Plate 10 – Transformer area

Norman Road Area

Plate 11 – Crossness STW access track

Plate 12 – Area south of access track

Plate 13 – Area north of access track

Plate 14 – Typical surfacing

Plate 15- Industrial type shed & service yard

Plate 16 – New substation in southern corner

River Thames

Plate 17 – Shoreline of Thames

Plate 18 – Jetty foundations

Plate 19 – Typical jetty view

Plate 20 – Crossnewss STW outflow

Plate 21 – Jetty view from above

Electrical Connection Route

Plate 22 – View north at footpath adj. to Great Breach Dyke

Plate 23 – View south at footpath adj. to Great Breach Dyke

Plate 24 – Junction at southern end of Norman Road

Plate 25 – Bronze Age Way at Mitchell Close junction (facing south)

Plate 26 – Bronze Age Way at junction with Queens Road (facing south)

Plate 27 – Northend Road at Colyers Lane junction (facing south)

Plate 28 – Thames Road at junction with Kennet Road (facing south)

Plate 29 – University Way at junction with Marsh St. North (facing south)

Plate 30 – Littlebrook 132kV substation

Appendix G Information on Earlier Processes

- G.1.1 The following is informed by a 1908 Goad Fire Insurance Plan and other historical sources, as cited.
- G.1.2 The Borax Consolidated Limited Belvedere Mills site is indicated to be located in the north-eastern corner of the site. The works comprises a main brick-built building divided into several processing rooms (mixing room, packing and sifting room, drying room, crystallising shop) and storage rooms (storage, colour store, machinery store, 'crude material' store, coal bunker). A 'tank' is also present at the north end of the building adjacent to the coal bunker. Inside the building, near the coal bunker are three steam boilers set in brick. To the east of the works building is a yard area within which several wooden and metal sheds are present, used for storage of 'crude material', bricks and barrels. A tank is present in the yard along with a stockpile of 'trade refuse'.
- G.1.3 Immediately west of the borax works building is the premises of L.G. Brand, a tallow manufacturer. The majority of each floor of this two-storey, primarily wooden building is a single, large room used, at ground floor level for 'melting and packing' and at first floor for 'fat cutting and sorting'. A small metal shed adjacent to the main building houses a single steam boiler.
- G.1.4 To the west of the tallow factory is the works of Prockter & Bevington, producers of 'chemical manure'. This wooden-built works building contains a 'store' housing a steam boiler, a 'concentrating shed' and a 'boiling room' containing two steam boilers. A report by Dr. Edward Ballard (Ballard, E., 1973, Report to the Local Government Board) notes that at this works, manure was made by processing 'scutch' – *"which is the refuse matter left in the pans in which glue is made. This material is heated in closed pans by steam, with the addition of oil of vitriol, and there is an Arrangement for condensing the vapours which proceed from the pans. Fat is first skimmed off, and the residue, after boiling about three hours, is run off into 'delves' or trenches about four feet deep dug into the earth outside the works: these 'delves' are worked alternately. The manure which runs as a semi-liquid material into the 'delves' solidifies in them after a time, partly by evaporation and partly by soakage of the more watery parts into the earth. When sufficiently firm the manure is dug out and dried by spreading it on heated plates, or by heaping it over semi- circular brick flues"*.
- G.1.5 The New Marsh Tavern is present to the west of the manure works, and to the west of this is the works of the Belvedere Fish Guano Co. Ltd. This part-brick and part-wooden works comprises a large boiler room containing four steam boilers, an adjacent 'coal pit', an 'engine room', a 'rendering room', a large 'pan room', two "drying rooms and a 'store'. It is understood that here, manure was processed from fish offal gathered from the fishmongers of London² which was, similarly to the process described above, run out into trenches and later dug out. The 'Oil' in the company name is believed to refer to the production of 'oil of vitriol' (sulphuric acid) which was a common sister industry to the production of manure in the works on the lower Thames (The Commercial Motor, 1923, Multiple Bin Method of Refuse Collection – A system in Working for the Rapid Collection of Fish Offal).
- G.1.6 In the southeastern corner of the site, to the east of the terrace of houses is the works of the 'British Resin Works Limited'. This brick-built works building contains two steam boilers and a 20-horsepower steam engine, an area of stills and a wooden lean-to containing 'tanks'.
-

Appendix H Tables of Estimated Risk
