1. Introduction

AECOM Infrastructure & Environment UK Ltd (hereafter referred to as AECOM) was commissioned by Vitol Power International (VPI) Immingham to undertake a Supplementary Phase 1 Geo-environmental Site Assessment of the current VPI land, referred to hereafter as the 'site', to support the proposed development of a parcel of land to the north of the current VPI facility. The proposed development is understood to include construction of gas engines and an open cycle gas turbine (OCGT), which will be constructed on land to the north of the current VPI site.

A separate Phase 1 report has already been prepared for the additional parcel of land comprising the bulk of the proposed development, and this report has been designed to characterise the existing VPI power station site, parts of which are intended for construction laydown and connection corridors associated with the proposed development. A site location plan is provided as Figure 1.

1.1 Project Background

The current VPI Immingham combined heat and power (CHP) plant has been operational since 2004. The CHP power plant is understood to produce steam which is supplied to nearby Humber and Lindsey Oil Refineries. It is understood that the proposed development includes the addition of a series of gas engines and OCGT plant to the VPI Immingham site, to increase export from 1320 MWe to 1800 MWe.

While the development is proposed on undeveloped land to the north of the existing VPI facility, during construction the existing VPI car park (in the northeast of the site) and an area of open ground forming the southeastern boundary of the VPI site will be used for construction laydown. In addition, a connection corridor is proposed on the western and southern boundaries of the existing VPI facility.

1.2 Objectives and Aims

The objective of this Supplementary Phase 1 Environmental Desk Study was to determine the likely ground conditions beneath the site and the potential for ground contamination arising from historical or current on-site or off-site activities on the VPI facility. This risk assessment also aimed to determine the presence of contamination sources and potential pathways to sensitive receptors located both on and offsite.

1.3 Scope of Works

The scope of services for this study included:

- Commissioning and review of a Groundsure® report (including a regulatory database search, Coal Authority Report and historical Ordnance Survey (OS) maps);
- Review of publically available web-based sources, including the Environment Agency (EA) website and British Geological Survey (BGS);
- Review of relevant previous site investigation reports;
- Assessment of anticipated ground conditions and identification of potential development constraints; and
- Development of a preliminary Conceptual Site Model (CSM), identifying potential contaminants of concern, sources, pathways and receptors.

1.4 Information Sources

The following information sources were used in the completion of this geo-environmental assessment:

- Google Maps, accessed May 2018;
- Magic Maps Application http://magic.defra.gov.uk/MagicMap.aspx, accessed May 2018;
- Government Service website (https://flood-map-for-planning-service.gov.uk/), accessed May 2018;
- British Geological Survey (BGS) website (www.bgs.ac.uk) including the 'GeoIndex' tool, accessed May 2018;
- The Coal Authority Interactive Map Viewer (http://mapapps2.bgs.ac.uk/coalauthority/home.html), accessed May 2018;
- Groundsure® Reports; EnviroInsight (ref. GS-5087181), GeoInsight (ref. GS-5087182), and MapInsight (ref. GS- 5087183), dated 30th May 2018;
- UXO report, ref 502279
- The British Geological Survey (BGS) 1:50,000 solid and drift geology map No. 81;
- SOCOTEC, VPI Immingham, Draft Factual Report on Ground Investigation, Report No A8015-18, July 2018;
- AECOM Phase 2 Geotechnical and Geo-environmental Interpretative Report, VPI Immingham Energy Park, September 2018; and
- A site walkover conducted on 1st June 2018.

2. Site Description

2.1 Site Location

The site is located off Rosper Road, Immingham, North East Lincolnshire (see Figure 1), and is approximately 2 km east of South Killingholme. The site is centred on National Grid Reference (NGR) TA 16762 17168.

The site is surrounded by a mix of industrial and agricultural land use, namely the Total Lindsey Oil Refinery (TLOR) to the northwest, and the Phillips 66 Humber refinery to the southwest. Directly to the east is agricultural land and the River Humber is located approximately 1.3 km from the site. Directly south is an area of unused/ waste land.

2.2 Site Layout

The site occupies a total area of approximately 18.53 ha. The site consists of the CHP plant, the site car park and a former laydown area. The site is bounded to the east by Rosper Road. Immingham Port is located approximately 2.5km to the South East and the River Humber is located approximately 1.3km to the east.

2.3 Surrounding Land Use

Based on a review of maps, the land use immediately surrounding the site was assessed and is summarised below:

- North: Immediately north of the site is an area of undeveloped vegetated land, which is largely flat with two large mounds formed from stockpiled topsoil and subsoil generated from previous construction works to the north. Immediately north the undeveloped land lies the existing TLOR car park and an access road which links the Lindsey Oil Refinery and Rosper Road:
- East: An unnamed drain and Rosper Road are directly east of the site, beyond which there are agricultural fields:
- West: a railway line separates the site from the TLOR facility to the northwest; and
- South: Immediately south of the site is some unused waste/ grass land, bounded to the southwest by the railway line with the Philips 66 Humber Refinery beyond.

3. Environmental Setting

3.1 Geology

The Groundsure® reports (**Appendix A**), and data from the SOCOTEC factual report relating to a recent ground investigation conducted on land to the north of the site (**Appendix B**), publically available nearby BGS borehole records, historic reports associated with the site and nearby A160 improvements, have been reviewed to identify the likely geological sequence at the site. The anticipated sequence is detailed below:

3.1.1 Made Ground

The Groundsure® Geo Insight report records that to the north west of the site an area of historic surface ground workings. These areas are recorded as unspecified heaps, possibly associated with material generated during previous excavations conducted on the TLOR site.

A site walkover was conducted on the site and hardstanding and tarmac was evident across much of the eastern portion of the site formerly used as construction laydown during development of the CHP. Photos taken during the site visits are attached in **Appendix C**. It is anticipated that a layer of granular sub-base will be present beneath the areas of hardstanding.

The southern portion of the site was partially vegetated with a surface cover of gravel.

Aerial imagery and topographical surveys show that to the north of the site there are located a series of stockpiles. A ground investigation conducted in this area in early 2018 confirmed that the stock piles comprised brown sandy slightly gravelly clay, consistent with these stockpiles being topsoil and subsoil removed and stockpiled during construction of the TLOR car park north of the site.

3.1.2 Glacial deposits

The Groundsure® Geo Insight report indicates that superficial drift deposits on the site are likely to comprise glacial deposits, comprising glacial till and glacial sands and gravels. A small pocket of Tidal flat deposits consisting of clays and silts was located in the north east of the site.

Superficial deposits north of the site were recorded in the SOCOTEC factual report as comprising firm to very stiff sandy slightly gravelly clay, with occasional interbedded bands of laminated clay and silty gravelly sand, and silt.

3.1.3 Bedrock

Published geological maps and memoirs indicate that the site is underlain by the Burnham Chalk Formation of the Upper Cretaceous period. The BGS Lexicon describes the Burnham Chalk Formation as *"White, thinly-bedded chalk with common tabular and discontinuous flint bands; sporadic marl seams"*. The upper 10m to 20m of the bedrock is frequently described as "soft chalk", overlying "hard chalk and flints", indicating that the upper part of the Chalk is extensively weathered.

The depth to Burnham Chalk bedrock varied from 21.5 m bgl in the northeast to 28.5m bgl in the central southern portion of the site to the north of the VPI facility.

3.2 Hydrology

A review of Ordnance Survey maps indicated that the site is located approximately 1.3km west of the River Humber, which flows north west to south east. Drains run along the northern and north eastern site boundaries, and a small water storage pond is located approximately 100m north west of the site. The Humber Estuary is a designated Ramsar site.

The site is located within an area designated as 'Flood Risk Zone 3 whereby the Environment Agency issue flood warnings, meaning there is a high (greater than 1 in 100) annual probability of flooding. Flood defences are located along the banks of the River Humber and the area falls under the jurisdiction of North East Lindsey Internal Drainage Board.

3.3 Hydrogeology

Consultation with the Environment Agency Aquifer Maps indicates that:

- The superficial glacial deposits are classified as a ‘Secondary Aquifer (undifferentiated)’, defined either as ‘permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers’, or ‘lower permeability layers which may store and yield limited amounts of groundwater due to localised features such as fissures, tin permeable horizons and weathering’.
- The bedrock, Burnham Chalk Formation, is classified as a Principal Aquifer, defined as ‘highly permeable formations usually with a known or probable presence of significant fracturing. They may be highly productive and able to support large abstractions for public supply and other purposes.

Fourteen groundwater monitoring wells were installed on the development site to the north of the VPI site and during subsequent groundwater monitoring events standing groundwater levels ranged from 0.67m to 4.4m above Ordnance Datum (aOD).

3.4 Radon

Public Health England’s interactive Radon map indicates that the site is not in a Radon Affected Area, as less than 1% of properties are above the Action Level.

4. Site History

4.1 Introduction

AECOM has reviewed historical Ordnance Survey (OS) maps dating from 1886 to 2014 obtained as part of the Groundsure® report in order to assess potential historical uses of the site and the surrounding land. The summary provided below identifies key historical land uses and features which are considered to have the potential to have impacted the soil and groundwater beneath the subject site. The historical maps included within the Groundsure® report are provided in **Appendix D**.

4.2 History of the Site and Surrounding Land Use

AECOM has reviewed historical Ordnance Survey (OS) maps (**Appendix D**) and aerial imagery dating from 1886 to 2014 obtained as part of the Groundsure® report in order to assess potential historical uses of the site and the surrounding land. **Table 1** identifies the key historical land uses of the site and surrounding areas some of which are considered to have had the potential to impact the soil and groundwater beneath the site.

Table 1 – Summary of Site History

Year	On Site	Offsite
1886-1887	Marsh/ Agricultural land; Rosper Road present;	Humber road – South (350m) ; Cawber Farm – north west (550m); East middle mere road - north (650m); Marsh Farm – north east (700m);
1905-1910	No significant change;	No significant change;
1929-1930	No significant change;	Ulceby-Immingham railway line present south (adjacent); School present – south east (350m);
1947	No significant change;	No significant change;
1951	No significant change;	No significant change;
1968	No significant change;	No significant change;
1974	No significant change;	Oil refineries and associated buildings and tanks have been constructed and extend beyond 750m away from the site to the west/ north west and south; Railway line has been constructed running adjacent to the south west of the site ; Cawber farm is no longer there;
1983	No significant change;	No significant change;
2002	A pipeline now runs through the middle of the site and one borders the north western boundary of the site;	No significant change;
2010	Buildings constructed on site most likely associated with the VPI facility, with the pipeline being redirected around the facility;	Immingham West Fire Station – south east (400m);
2014	Roads associated with the VPI facility are now shown on the map.	No significant change.

5. Regulatory Database Search

5.1 Introduction

AECOM commissioned Groundsure® Limited to conduct a database search of available regulatory agency records to evaluate whether activities on or near the subject site have the potential to create a significant adverse impact. Groundsure® reviews databases compiled by national and local governmental agencies. The Groundsure® Report essentially relates to operational activities for which licences or authorisations are required and have been obtained pursuant to environmental laws. It is therefore possible that there are unauthorised activities being carried out in the vicinity of the subject site that are not detailed. It is noted that the database is not updated regularly and more recent unlisted or otherwise unregistered activities may therefore be present in the surrounding area.

It should be noted that this information is reported as AECOM received it from Groundsure®, which in turn reports information as it is provided in various government databases. It is not possible for either AECOM or Groundsure® to verify the accuracy or completeness of information contained in these databases. However, the use of this information is a generally accepted practice in the conduct of Phase 1 environmental assessments.

Sites identified within the study radius are evaluated to assess if they are likely to have had an adverse impact on the subject property or could be adversely affected by the subject property. The criteria used to evaluate sites within the study radius include distance from the subject property, expected depth and direction of groundwater and surface water flow, likely storm water flow direction and the presence / absence of documented contaminant releases at the identified sites.

The approximate distances to features described in this section have been estimated from the closest boundary of the site and may be subject to error.

5.2 Database Review

Key information from the Groundsure® Report that is considered pertinent to the subject site (within a radius of 500m), is summarised in **Table 2** below:

Table 2 – Summary of Database Review

CATEGORY	SUMMARY OF INFORMATION (<500m)
Part A(1) and IPPC Authorised Activities	1 effective: on site; and 8 superseded: on site;
List 1 Dangerous Substances Inventory Sites	1 inactive: 75m south west for Mercury and Cadmium relating to the Phillips 66 Humber Refinery site;
List 2 Dangerous Substance Inventory Sites	1 active: 75m south west for arsenic, chromium, copper, lead, nickel and zinc relating to the Phillips 66 Humber Refinery site;
Part A(2) and Part B Activities and Enforcements	2 current part B permits 245m south east both for coal and coke, one for Phillips 66 and one for P.D Port Services Ltd; 1 current part A2 permit 450m south west for coal and coke for Longs Steel (UK) Limited.1 historic part B permit 260m south east for coal and coke for P.D. Port Services Ltd; 1 historical part B permit 320m south east for coal and coke for P.D. Port Services Ltd;
Licensed Discharge Consents	4 revoked: one 40m north west (relating to The Lindsey Oil Refinery), two 75m south west (relating to the Humber Refinery) and one 410m south east (relating to the common pump station); and 2 effective: one 250m north west (relating to the Humber Refinery) and one 450m south east (relating to the Fire Station);

CATEGORY	SUMMARY OF INFORMATION (<500m)
Planning Hazardous Substance Consents and Enforcements	1 approved active consents: 130m south relating to VPI Immingham – Consent to store 3050 tonnes of petroleum gas oil;
Dangerous or Hazardous Sites	1 on site current COMAH site (lower tier) relating to VPI Immingham CHP; 3 off site current COMAH sites (all upper tier) relating to the Total Lindsey Oil Refinery (30m north west), Phillips 66 Humber refinery (40m south) and Associated British Ports (410m south east); 2 off site historic NIHHS sites for Conoco Manufacturing Ltd (90m south) and Humberside Sea and Land Services Limited (120m south) 1 off site historic COMAH site relating to Humber LPG terminal Ltd (310m north east)
EA Recorded Pollution Incidents List 2	2 recorded: 1 On site – minor impact to air (atmospheric pollutants and effects) 1 20m south – minor impact to land & air (Oils and Fuels);
EA Recorded Pollution Incidents List 1	1 recorded 20m south of site relating to major persistent and extensive impacts to water (East Halton Beck);
Environment Agency/Natural Resources Wales historic landfill sites	1 historic landfill licence relating to liquid sludge from the Lindsey Oil Refinery (120m north west);
Environment Agency/Natural Resources Wales licensed waste sites	1 surrendered license 260m north west of the site relating to a biological treatment facility operated by the Lindsey Oil Refinery.

No other database entries were identified within 500m of the site boundary. Database listings reviewed included: Historic IPC Authorisations, Red List Discharge Consent Register Part A(2) and Part B Activities and Enforcements, Category 3 or 4 Radioactive Substances Authorisations, Water Industry Referrals, Sites Determined as Contaminated land (Part 2a) or Petrol & fuel sites.

6. Previous Reports

6.1 Introduction

AECOM reviewed previous environmental reports for the site by various others, as listed in Section 1.6. Pertinent information considered relevant to this assessment is summarised in the following sections.

6.2 Factual Report on Ground Investigation, VPI Immingham, SOCOTEC (August, 2018)

In April 2018, SOCOTEC conducted a Phase 2 intrusive investigation on the development site to the north of the VPI site. The findings were presented in a Factual Report, dated August 2018 (**Appendix B**). The investigation comprised the following:

- Installation of six cable percussive boreholes (BH1-BH6), with rotary drilling follow on in three of the holes(BH1, BH2 & BH5);
- Advancement of eight window samples (WS01-WS08); and
- Excavation of ten trial pits (TP01-TP10) and three trial trenches (TT1-TT3).

6.2.1 Ground Conditions

Exploratory hole logs and the results of in-situ and geotechnical testing are presented in SOCOTEC's factual report enclosed in **Appendix B.** The exploratory holes encountered the following generalised succession beneath the site, summarised in **Table 3** below:

Table 3 – Summary of Ground Conditions Encountered

Material	Typical Description	Top of Strata (m bgl)	Base of Strata (m bgl)	Top of Strata (m OD)	Base of Strata (m OD)
Made Ground	Sandy gravelly clay	0.0	0.2 to 1.7	6.5 to 4.0	6.3 to 3.2
Glacial Till	Firm to stiff sandy gravelly clay	0.0 to 1.7	21.5 to 27.5	6.0 to 3.5	-16.8 to -21.5
Glacial Sands and Gravels	Medium dense clayey sand and gravel	12.9 to 13.0	15.2 to 16.0	-6.6 to 8.2	-9.3 to - 10.6
Weathered Chalk	Extremely weak to very weak chalk	21.5 to 27.5	26.1 to 30.9	-17.0 to 21.5	-22.5 to -26.6
Unweathered Chalk	Medium Strong to strong chalk	26.1 to 30.9	Unproven	-22.5 to 26.5	Unproven

During the investigation, AECOM staff collected soil and groundwater samples for chemical analysis. The results of the analysis are presented in the AECOM Phase 2 Interpretative Report, summarised below.

6.3 Phase 2 Geotechnical and Geo-environmental Interpretative Report, VPI Immingham Energy Park, AECOM (September 2018)

A copy of the AECOM Phase 2 Geotechnical and Geo-Environmental Interpretative report is attached in **Appendix E.**

6.3.1 Soil Sampling and Analysis

Soil headspace analysis was undertaken in the field using a Photo Ionisation Detector (PID), and of the nine samples with measurable PID readings, eight were less than 5ppm, with one sample from TP02 yielding a higher reading of 42.4ppm.

Soil samples were collected from each exploratory location and submitted for chemical analysis at Exova Jones, an AECOM approved laboratory, with 26 samples analysed for the following contaminants:

- Volatile Organic Compounds (VOCs) including tentatively identified compounds (TICs);
- Semi-volatile organic compounds (SVOCs) including TICs;
- Total Petroleum Hydrocarbons (TPH-CWG);
- Metals (including arsenic, barium, beryllium, cadmium, chromium, copper, lead, mercury, nickel, selenium, zinc, vanadium);
- Anions (including fluoride, nitrate, chloride, sulphide, and sulphate)
- pH;
- Soil organic matter; and
- Asbestos screening.

6.3.2 Soil Results and Human Health Risk Assessment

With respect to asbestos, 25 soil samples (from made ground or reworked natural deposits) were submitted for asbestos screening, and fibre bundles of chrysotile were identified in six samples (BH1, BH2, WS01, TP01, TP02 and TP06), all located in the western portion of the site. These six samples were submitted for additional quantitative analysis, and all of the samples contained trace levels of asbestos (<0.001% w/w).

The results of the chemical analysis were screened against generic assessment criteria (GACs) derived for commercial / industrial end use, and no exceedances for any of the contaminants of concern were reported.

6.3.3 Groundwater Monitoring

Following drilling, fourteen groundwater monitoring wells were installed in the window samples (WS01-WS08) and deeper boreholes (BH1-BH6). Subsequent groundwater monitoring events were conducted in April 2018, and measured groundwater levels measured are summarised in **Table 4** below:

Table 4 – Groundwater Monitoring Results Summary

Hole ID	GL m OD	Range of groundwater levels m bgl	Range of ground water levels m OD	Response zone (m bgl)	Strata
BH01	6.36	3.70 -3.97	2.39 - 2.65	12.50-15.00	Glacial Deposits
BH02	5.43	2.66 - 2.87	2.56 - 2.77	14.00-15.30	Glacial Deposits
BH03	5.43	2.57 - 2.75	2.68 - 2.86	26.60-28.60	Burnham Chalk
BH04	4.19	1.31 - 1.56	2.63 - 2.88	28.60-34.60	Burnham Chalk
BH05	4.65	1.86 - 2.04	2.61 - 2.78	17.50-18.50	Glacial Deposits
BH06	4.71	2.19 - 2.33	2.38 - 2.51	25.50-34.50	Burnham Chalk
WS01	6.49	2.08 - 2.16	4.33 - 4.40	1.00-1.40	Made Ground
WS02	5.46	1.32 - 1.36	4.09 - 4.14	0.70-1.20	Made Ground
WS03	5.52	1.40 - 1.52	3.99 - 4.12	2.50-3.50	Glacial Deposits
WS04	5.1	0.96 - 0.99	4.11 - 4.13	1.30-2.30	Made Ground/Glacial Deposits

WS05	4.7	0.98 - 1.00	3.67 - 3.72	3.20-4.20	Glacial Deposits
WS06	5.69	1.59 - 1.64	4.05 - 4.10	3.10-3.70	Glacial Deposits
WS07	5.79	1.83 - 1.86	3.92 - 3.95	3.00-3.50	Glacial Deposits
WS08	4.53	3.33 - 3.86	0.67 - 1.19	3.60-4.10	Glacial Deposits

Measured groundwater levels range from 4.33m OD to 0.67m OD.

6.3.4 Groundwater Sampling and Analysis

During the subsequent monitoring, eight groundwater samples were collected and submitted for analysis of the following:

- Volatile Organic Compounds (VOCs) including tentatively identified compounds (TICs);
- Semi-volatile organic compounds (SVOCs) including TICs;
- Total Petroleum Hydrocarbons (TPH-CWG);
- Metals (including arsenic, barium, beryllium, boron, cadmium, chromium, copper, iron, lead, mercury, nickel, selenium, zinc, vanadium);
- Anions (including alkalinity, ammoniacal nitrogen, chloride, nitrate, phosphate, and sulphate)
- pH; and
- Dissolved organic carbon.

6.3.5 Groundwater Results and Controlled Waters Risk Assessment

The following Controlled Waters receptors were considered in the assessment:

- Superficial deposits underlying the site are classified as a Secondary Aquifer (undifferentiated);
- The Burnham Chalk Formation limestone bedrock underlying the site classified as a Principal Aquifer; and
- The Humber estuary.

Drinking Water Standards (DWS) and coastal Environmental Quality Standards (EQS) were used for screening groundwater results to assess potential risks to underlying groundwater and surface water respectively. The exceedances identified are summarised in **Table 5,** below:

Table 5 – Exceedance of Stage 2 GAC for Controlled Waters: Groundwater

Parameter	Location	Max Concentration (µg/l)	Exceedance of DWS	Exceedance of EQS
Selenium	BH03	16	X	
Zinc	BH01, BH03, WS05	12		X
Sulphate	WS03-WS06	983,900		X
Chloride	WS03-WS05	1,280,000		X

Only selenium concentrations exceeded the DWS, while concentrations of zinc, sulphates and chloride exceeded the Coastal EQS.

The exceedance of the DWS for selenium was marginal (a magnitude of 1.6) and there are no potable extractions in the vicinity of the site.

According to published Environment Agency monitoring data for surface waters within the hydrological catchment of the site, the EQS exceedances for zinc, sulphate and chloride were not replicated in surface waters.

6.3.6 Ground Gas Risk Assessment

A ground gas assessment was completed based on a three ground gas monitoring events undertaken during May and June 2018.

The results of the gas monitoring are summarised below:

- Methane was recorded at levels <0.1 – 0.7% Vol. which is below the lower explosive limit.
- Carbon dioxide was recorded at levels <0.1 – 3.9% Vol.
- Oxygen was recorded at levels between 14.4– 20.7% Vol;
- Gas flow rates were recorded between -17.0 and 7.3l/hr;

Potential risks posed by the identified ground gas regime were assessed using the methodology outlined in BS 8485:2015, and the site was classified as Characteristic Situation (CS) 2, with respect to ground gases, which equated to a low risk.

7. Conceptual Site Model

7.1 Introduction

AECOM has developed a preliminary conceptual site model (CSM) based on a qualitative "Source → Pathway → Receptor" (SPR) risk assessment. The following sections consider the identified potential sources, pathways and receptors.

7.2 Assessment Framework

The site, in terms of potential land contamination, will be regulated by the local authority (Lincolnshire County Council) under the Town and Country Planning Act 1990 (as amended), taking account of the National Planning Policy Framework 2012, with the Environment Agency, Natural England and English Heritage acting as statutory consultees.

The 'suitable for use' approach is adopted for the assessment of contaminated land where remedial measures are only undertaken where unacceptable risks to human health or the environment are realised taking into account the use (or proposed use) of the land in question and the environmental setting. Additional environmental liabilities can arise through provisions contained within statutory legislation including Part 2A of the EPA 1990, the Water Resources Act 1991, the Groundwater Regulations 2009 and the Water Act 2003.

Current best practice recommends that the determination of health hazards due to contaminated land is based on the principle of risk assessment, as outlined in the Statutory Guidance to Part 2A (2012) and CLR11.

The risk assessment process for environmental contaminants is based on a source-pathway-receptor analysis. These terms can be defined as follows:

- Source: hazardous substance that has the potential to cause adverse impacts;
- Pathway: route whereby a hazardous substance may come into contact with the receptor: examples include ingestion of contaminated soil and leaching of contaminants from soil into watercourses; and
- Receptor: target that may be affected by contamination: examples include human occupants / users of site, water resources (surface waters or groundwater), or structures.

For a risk to be present there must be a relevant pollutant linkage; i.e. a mechanism whereby a source impacts on a sensitive receptor via a pathway resulting in potentially significant harm.

Further details on the risk assessment process and methodology are provided in **Appendix F**.

7.3 Potential Sources of Contamination

Based upon the available information, potential sources of contamination include:

7.3.1 On Site

- Sources associated with a pipeline which was constructed between 1983 and 2002; and
- Sources from the VPI facility constructed in 2004.

7.3.2 Offsite

- Total Lindsey Oil Refinery & Phillips 66 Humber Refinery (operations and spills/leaks);
- Made ground within infilled land associated with the former sludge land farm and construction activities in the area
- Railway line and railway sidings; and,
- Surrounding agricultural land use.

7.4 Contaminants of Concern

Identified potential sources of contamination are summarised in **Table 6**, below.

Table 6 – Summary of Contaminants of Concern

Land use	Contaminant Grouping	Specific Contaminants
VPI power plant operations including pipeline **(on site)**	Organic	- Hydrocarbons e.g. crude oil, motor oils, petrol, diesel, kerosene, lubricants, waxes, bitumen, aviation fuel - Other organics e.g. alcohols, PCBs, MTBE, TAME, solvents, aliphatic and aromatic compounds
	Inorganic	- Mineral acids, alkalis, cyanides, sulphur and sulphide - Metals e.g. aluminium, cobalt, copper, iron, lead, molybdenum, nickel and vanadium
	Other	- Asbestos
Agricultural land (on site)	Organic	- Insecticides/pesticides/ herbicides including organophosphates, Diazinon, Alphacypermethrin, Oxfendazole, Ivermectin, Glyphosate
Made ground within land farm and infilled land/ stockpiles **(off site)**	Organic	- Hydrocarbons e.g. diesel, lubricating oils, petrol - Polychlorinated Biphenyls (PCBs) - Polycyclic Aromatic Hydrocarbons (PAHs)
	Inorganic	- Metals including arsenic, zinc, lead, copper, manganese and cadmium
	Other	- Ground gases including carbon dioxide, methane and hydrogen sulphide. - Asbestos
Railway line and former railway sidings **(off site)**	Organic	- Hydrocarbons e.g. diesel, lubricating oils, paraffin - Polychlorinated Biphenyls (PCBs) - Polycyclic Aromatic Hydrocarbons (PAHs) - Solvents - Ethylene glycol - Creosote (contains PAHs) - Herbicides (e.g. atrazine, simazine, sodium chlorate, dalapon, diuron, borax, paraquat, picloram)
	Inorganic	- Ferrous residues - Metal fines
	Other	- Asbestos - Ash and fill (possibly containing metals, phenols, sulphates and PAHs)

Information included in the above table is based upon information from the Department of Environment (DoE) 1995 Industry Profiles for “Oil refineries and bulk storage of crude oil and petroleum products” and “Railway land”, the Health and Safety Executive database on pesticides, the Veterinary Medicines Directorate Defra website as well as industry experience

Whilst **Table 6** generally reflects contaminants that are associated with the specified land uses, it is not an exhaustive list, nor should it be interpreted as a list of chemicals that are present at site. It should also be noted that unrecorded land uses (which can significantly impact ground conditions on site) may have occurred; consequently uncertainty remains as to the exact nature and extent of potential contamination on site.

7.5 Potential Receptors

7.5.1 Human Health:

- On site construction workers;
- Current and future workers at the VPI site
- Future workers at the new power station to the north; and

- Off-site workers e.g. Total Lindsey Oil Refinery.

7.5.2 Controlled Waters:

- Surface waters including the River Humber and nearby drains;
- Shallow groundwater within the superficial deposits (Secondary undifferentiated Aquifer); and,
- Groundwater within the bedrock (Principal Aquifer).

7.5.3 Infrastructure:

- Underground services e.g. buried pipes; and,
- Proposed future on-site buildings.

7.5.4 Ecology:

- Flora and Fauna; and,
- Ecological systems associated with SSSI, SAC and Ramsar designations within the Humber Estuary.

7.6 Potential Pathways

7.6.1 Human Health:

- Direct dermal contact with substances in shallow soil and/or groundwater during potential groundworks;
- Inhalation of substances from the partitioning of vapours from soil and / or shallow groundwater; and,
- Accidental ingestion and/or inhalation of substances in soil/dust and/or shallow groundwater during potential groundworks.

7.6.2 Controlled Waters:

- Vertical migration through unsurfaced areas, vegetated areas and hard-standing, and drains / pipework into Made Ground / shallow soils;
- Lateral and vertical migration within the made ground and superficial deposits (Secondary undifferentiated Aquifer), e.g. leaching from made ground vertically into shallow soil layers, including into deeper groundwater;
- Preferential lateral and vertical migration along routes of underground services, pipelines and associated trenches;
- Lateral overland flow, including via drains, to nearby surface waters; and
- Lateral and vertical migration within deeper groundwater with the chalk aquifer.

7.6.3 Ecology:

- Plant uptake and subsequent ingestion by fauna; and,
- Ecological systems designated SSSI, SAC and Ramsar within the Humber Estuary.

7.6.4 Infrastructure:

- Migration of ground gases and accumulation in confined spaces associated with the future development of the site (e.g. basements, service ducts).
- Piling foundations associated with future development of the site.

7.7 Summary of Potential Pollutant Linkages (CSM)

A summary of the potential pollutant linkages and the related initial qualitative assessment of risk is summarised in **Table 7**, below. The risk rankings assume that the current ground and groundwater conditions prevail, prior to any mitigation measures such as further intrusive investigation, quantitative risk assessment or remediation. The risk rankings for each of the pollutant linkages are derived from a combination of the magnitude of the potential consequence (i.e. severity) of the exposure of the receptor to the contaminant; and the magnitude of probability (i.e. likelihood) that the pollutant linkage is present or will occur.

Table 7 – Summary of Pollutant Linkages

SOURCE	PATHWAY	RECEPTOR	POTENTIAL SEVERITY	LIKELIHOOD OF OCCURRENCE	LEVEL OF RISK	DISCUSSION AND POSSIBLE MITIGATION
Made ground within areas of potentially infilled land/ stockpiles	Direct contact and/or ingestion of contaminated material	On site construction workers and future logistics site employees	Moderate	Possible	Medium	Direct contact and ingestion of contaminated particulates and dust is possible during site works, and as such there should be appropriate safety and mitigation measure (e.g. the use of PPE) put in place to minimise occupational risks to human health should areas of suspected contamination be encountered. Given use of the site is restricted to construction laydown, with little in the way of earthworks proposed, the risks of encountering contaminated soils is considered to be minimal.
	Inhalation of particulates/dusts/ vapours / gases	On site construction workers/ employees	Moderate	Possible	Medium	As with the direct contact/ingestion pathway there is a possibility for vapours/gases/dusts and/or particulates to be inhaled as a consequence of disturbing the ground during site work. For the proposed development, the greatest risk is associated with the construction of service and utility trenches which dependent on the depth of excavation should be considered confined spaces.
	Migration of ground gases (e.g. methane and carbon dioxide) through permeable made ground strata	Newly constructed infrastructure	Minor	Possible	Low	Due to the proximity of the site to potentially in filled land an assessment of risks from ground gases may be required. As above, these risks are only likely to be present during construction, with no buildings proposed on the site as part of the development.
	Leaching/ surface runoff of substances from any newly exposed/ excavated ground	Surface waters	Moderate	Unlikely	Low	Because earthworks on the development site might generate stockpiles of site won material which may be temporarily stored on the laydown area, there is the potential for leaching/surface run off and migration of substances from these newly exposed materials into surface waters (e.g. drains) and subsequently into contact with flora and fauna within said surface waters. Mitigation measures e.g. making sure any suspected contaminated material is contained and/ or appropriately disposed of, any plant machinery is thoroughly decontaminated and intrusive works minimised to reduce the disturbance of soils and fuel spills are rapidly dealt with is likely to be required for any soils stockpiled.
		Flora and fauna within areas designated SSSI, SAC or Ramsar	Moderate	Unlikely	Low	

Impacted shallow groundwater below site	Vertical migration of impacted groundwater from within the made ground superficial deposits	Deeper groundwater in the bedrock	Moderate	Unlikely	Low	Considering the low porosity of the superficial deposits it is unlikely that contaminants will be able to migrate to significant depths towards the bedrock. Despite this low risk it is still advised that good construction work practices are implemented.
Impacted shallow groundwater below site	Vertical migration of impacted groundwater from within the made ground and superficial deposits via enhanced pathways e.g. utility trenches	Deeper groundwater in the bedrock	Moderate	Unlikely	Low	The low permeable superficial deposits are likely acting as a protective layer above the Burnham formation chalk bedrock. It is considered unlikely that any foundations or excavations associated with utilities constructed as part of the Proposed Development will penetrate the full thickness of low permeability superficial deposits and the risk of utilities acting as a preferential pathway to deep groundwater is considered to be low.

8. Conclusions and Data Gaps

8.1 Conclusions

This Phase 1 Geo-environmental assessment comprises a review of available geo-environmental information for the VPI Immingham site in order to assess the likely ground conditions beneath the site and the potential for ground contamination arising from historical or current on-site or off-site activities.

Key findings of the assessment included:

- The geology underlying the site is anticipated to comprise variable depths of Made Ground, superficial deposits (Glacial till and Glacial sands and gravels) and weathered bedrock consisting of the Burnham Chalk Formation;
- The superficial deposits are classified as being of Secondary (undifferentiated) Aquifer potential. The Burnham Chalk Formation is classified as a Principal Aquifer;
- The largest and most proximal surface water course is the River Humber, located ~1.3km directly to the east of the site. A number of other drains and tributaries of the River Humber are also present in close proximity to the site;
- Prior to its current use as a CHP plant site has been used primarily as agricultural land with the exception of a pipeline which was constructed between 1983 and 2002. A limited number of other potential sources of contamination were identified from historical maps including a railway, oil refineries and a former sludge land farm;
- There are significant data gaps relating to the presence of potential contamination originating from the historic sludge land farm located to the north of the site; and
- The main risks identified by the CSM pertained to the direct contact and inhalation of contaminants by construction workers as well as the potential for impacted shallow groundwater to migrate into the deeper groundwater via enhanced pathways e.g. piling foundations and boreholes. Thus it is advised that appropriate PPE is worn by those likely to come into contact with site soils and particular care is taken during the design and construction if works are required to go beyond the superficial deposits.

8.2 Data Gaps

Whilst the information from secondary datasets and previous ground investigation reports are able to provide a general idea of expected ground conditions, unrecorded land uses (which can significantly impact ground conditions on site) may have occurred. Furthermore coverage from previous ground investigations is poor for the site. Consequently large uncertainty remains as to the exact nature of the ground conditions present at the site, particularly in regards to the nature of the potentially infilled land associated with the historic land farm to the north of site.

8.3 Recommendations

Based upon the above data gaps, it is recommended that intrusive ground investigations, (potentially with further phases of additional ground investigation to delineate contamination hotspots, if identified), are undertaken in order to further assess potential risks posed to the proposed development (associated with ground conditions at the site) and establish an accurate environmental baseline of the site prior to the proposed development.

The ground investigations should include the installation of gas and groundwater monitoring wells across the site and around its perimeter to allow collection of soil and groundwater samples for laboratory analysis of contaminants based on the potential sources identified in Section 7.4. A programme of periodic gas and groundwater monitoring events may also need to be undertaken in order to identify changes in site conditions in response to weather and seasonal changes.

Overview of Findings

For further details on each dataset, please refer to each individual section in the main report as listed. Where the database has been searched a numerical result will be recorded. Where the database has not been searched '-' will be recorded.

Section 1: Historical Industrial Sites	On-site	0-50	51-250	251-500
1.1 Potentially Contaminative Uses identified from 1:10,000 scale mapping	0	6	13	54
1.2 Additional Information – Historical Tank Database	0	0	5	40
1.3 Additional Information – Historical Energy Features Database	0	0	0	4
1.4 Additional Information – Historical Petrol and Fuel Site Database	0	0	0	0
1.5 Additional Information – Historical Garage and Motor Vehicle Repair Database	0	0	0	0
1.6 Potentially Infilled Land	0	0	9	6

Section 2: Environmental Permits, Incidents and Registers	On-site	0-50m	51-250	251-500
2.1 Industrial Sites Holding Environmental Permits and/or Authorisations				
2.1.1 Records of historic IPC Authorisations	0	0	0	0
2.1.2 Records of Part A(1) and IPPC Authorised Activities	9	0	0	0
2.1.3 Records of Red List Discharge Consents	0	0	0	0
2.1.4 Records of List 1 Dangerous Substances Inventory sites	0	0	1	0
2.1.5 Records of List 2 Dangerous Substances Inventory sites	0	0	1	0
2.1.6 Records of Part A(2) and Part B Activities and Enforcements	0	0	2	3
2.1.7 Records of Category 3 or 4 Radioactive Substances Authorisations	0	0	0	0
2.1.8 Records of Licensed Discharge Consents	0	1	3	6
2.1.9 Records of Water Industry Referrals	0	0	0	0
2.1.10 Records of Planning Hazardous Substance Consents and Enforcements within 500m of the study site	1	0	0	1
2.2 Records of COMAH and NIHHS sites	0	3	2	2
2.3 Environment Agency/Natural Resources Wales Recorded Pollution Incidents				
2.3.1 National Incidents Recording System, List 2	1	1	0	0
2.3.2 National Incidents Recording System, List 1	0	1	0	0
2.4 Sites Determined as Contaminated Land under Part 2A EPA 1990	0	0	0	0

Section 3: Landfill and Other Waste Sites	On-site	0-50m	51-250	251-500	501-1000	1000-1500
3.1 Landfill Sites						
3.1.1 Environment Agency/Natural Resources Wales Registered Landfill Sites	0	0	0	0	0	Not searched
3.1.2 Environment Agency/Natural Resources Wales Historic Landfill Sites	0	0	1	0	6	8
3.1.3 BGS/DoE Landfill Site Survey	0	0	0	0	0	0
3.1.4 Records of Landfills in Local Authority and Historical Mapping Records	0	0	0	0	0	0
3.2 Landfill and Other Waste Sites Findings						
3.2.1 Operational and Non-Operational Waste Treatment, Transfer and Disposal Sites	0	0	0	0	Not searched	Not searched
3.2.2 Environment Agency/Natural Resources Wales Licensed Waste Sites	0	0	0	1	2	8

Section 4: Current Land Use	On-site	0-50m	51-250	251-500
4.1 Current Industrial Sites Data	4	1	10	Not searched
4.2 Records of Petrol and Fuel Sites	0	0	0	0
4.3 National Grid Underground Electricity Cables	0	0	0	0
4.4 National Grid Gas Transmission Pipelines	0	0	0	0

Section 5: Geology	
5.1 Records of Artificial Ground and Made Ground present beneath the study site	None identified
5.2 Records of Superficial Ground and Drift Geology present beneath the study site	Identified
5.3 For records of Bedrock and Solid Geology beneath the study site see the detailed findings section.	

Section 6: Hydrogeology and Hydrology	0-500m
6.1 Records of Strata Classification in the Superficial Geology within 500m of the study site	Identified
6.2 Records of Strata Classification in the Bedrock Geology within 500m of the study site	Identified

	On-site	0-50m	51-250	251-500	501-1000	1000-2000
6.3 Groundwater Abstraction Licences (within 2000m of the study site)	0	0	0	0	10	6
6.4 Surface Water Abstraction Licences (within 2000m of the study site)	0	0	0	0	0	1
6.5 Potable Water Abstraction Licences (within 2000m of the study site)	0	0	0	0	0	0
6.6 Source Protection Zones (within 500m of the study site)	1	0	0	0	Not searched	Not searched
6.7 Source Protection Zones within Confined Aquifer	0	0	0	0	Not searched	Not searched
6.8 Groundwater Vulnerability and Soil Leaching Potential (within 500m of the study site)	1	0	0	1	Not searched	Not searched

Section 6: Hydrogeology and Hydrology

	0-500m					
	On-site	0-50m	51-250	251-500	501-1000	1000-1500
6.9 Environment Agency/Natural Resources Wales information on river quality within 1500m of the study site	No	No	No	No	No	No
6.10 Ordnance Survey MasterMap Water Network entries within 500m of the site	18	34	62	116	Not searched	Not searched
6.11 Surface water features within 250m of the study site	Yes	Yes	Yes	Not searched	Not searched	Not searched

Section 7: Flooding

7.1 Enviroment Agency Zone 2 floodplains within 250m of the study site	Identified
7.2 Environment Agency/Natural Resources Wales Zone 3 floodplains within 250m of the study site	Identified
7.3 Risk of flooding from Rivers and the Sea (RoFRaS) rating for the study site	Very Low
7.4 Flood Defences within 250m of the study site	None identified
7.5 Areas benefiting from Flood Defences within 250m of the study site	None identified
7.6 Areas used for Flood Storage within 250m of the study site	None identified
7.7 Maximum BGS Groundwater Flooding susceptibility within 50m of the study site	Potential at Surface
7.8 BGS confidence rating for the Groundwater Flooding susceptibility areas	High

Section 8: Designated Environmentally Sensitive Sites

	On-site	0-50m	51-250	251-500	501-1000	1000-2000
8.1 Records of Sites of Special Scientific Interest (SSSI)	0	0	0	0	0	4
8.2 Records of National Nature Reserves (NNR)	0	0	0	0	0	0
8.3 Records of Special Areas of Conservation (SAC)	0	0	0	0	0	1
8.4 Records of Special Protection Areas (SPA)	0	0	0	0	0	1
8.5 Records of Ramsar sites	0	0	0	0	0	1
8.6 Records of Ancient Woodlands	0	0	0	0	0	0
8.7 Records of Local Nature Reserves (LNR)	0	0	0	0	0	0
8.8 Records of World Heritage Sites	0	0	0	0	0	0
8.9 Records of Environmentally Sensitive Areas	0	0	0	0	0	0

Section 8: Designated Environmentally Sensitive Sites

	On-site	0-50m	51-250	251-500	501-1000	1000-2000
8.10 Records of Areas of Outstanding Natural Beauty (AONB)	0	0	0	0	0	0
8.11 Records of National Parks	0	0	0	0	0	0
8.12 Records of Nitrate Sensitive Areas	0	0	0	0	0	0
8.13 Records of Nitrate Vulnerable Zones	1	0	1	0	0	1
8.14 Records of Green Belt land	0	0	0	0	0	0

Section 9: Natural Hazards

9.1 Maximum risk of natural ground subsidence	Moderate
9.1.1 Maximum Shrink-Swell hazard rating identified on the study site	Low
9.1.2 Maximum Landslides hazard rating identified on the study site	Very Low
9.1.3 Maximum Soluble Rocks hazard rating identified on the study site	Negligible
9.1.4 Maximum Compressible Ground hazard rating identified on the study site	Moderate
9.1.5 Maximum Collapsible Rocks hazard rating identified on the study site	Very Low
9.1.6 Maximum Running Sand hazard rating identified on the study site	Moderate
9.2 Radon	
9.2.1 Is the property in a Radon Affected Area as defined by the Health Protection Agency (HPA) and if so what percentage of homes are above the Action Level?	The site is not in a Radon Affected Area, as less than 1% of properties are above the Action Level.
9.2.2 Is the property in an area where Radon Protection are required for new properties or extensions to existing ones as described in publication BR211 by the Building Research Establishment?	No radon protective measures are necessary.

Section 10: Mining

10.1 Coal mining areas within 75m of the study site	None identified
10.2 Non-Coal Mining areas within 50m of the study site boundary	None identified
10.3 Brine affected areas within 75m of the study site	None identified

Using this report

The following report is designed by Environmental Consultants for Environmental Professionals bringing together the most up-to-date market leading environmental data. This report is provided under and subject to the Terms & Conditions agreed between Groundsure and the Client. The document contains the following sections:

1. Historical Industrial Sites

Provides information on past land uses that may pose a risk to the study site in terms of potential contamination from activities or processes. Potentially Infilled Land features are also included. This search is conducted using radii of up to 500m.

2. Environmental Permits, Incidents and Registers

Provides information on Regulated Industrial Activities and Pollution Incidents as recorded by Regulatory Authorities, and sites determined as Contaminated Land. This search is conducted using radii up to 500m.

3. Landfills and Other Waste Sites

Provides information on landfills and other waste sites that may pose a risk to the study site. This search is conducted using radii up to 1500m.

4. Current Land Uses

Provides information on current land uses that may pose a risk to the study site in terms of potential contamination from activities or processes. These searches are conducted using radii of up to 500m. This includes information on potentially contaminative industrial sites, petrol stations and fuel sites as well as high pressure gas pipelines and underground electricity transmission lines.

5. Geology

Provides information on artificial and superficial deposits and bedrock beneath the study site.

6. Hydrogeology and Hydrology

Provides information on productive strata within the bedrock and superficial geological layers, abstraction licenses, Source Protection Zones (SPZs) and river quality. These searches are conducted using radii of up to 2000m.

7. Flooding

Provides information on river and coastal flooding, flood defences, flood storage areas and groundwater flood areas. This search is conducted using radii of up to 250m.

8. Designated Environmentally Sensitive Sites

Provides information on the Sites of Special Scientific Interest (SSSI), National Nature Reserves (NNR), Special Areas of Conservation (SAC), Special Protection Areas (SPA), Ramsar sites, Local Nature Reserves (LNR), Areas of Outstanding Natural Beauty (AONB), National Parks (NP), Environmentally Sensitive Areas, Nitrate Sensitive Areas, Nitrate Vulnerable Zones and World Heritage Sites and Scheduled Ancient Woodland. These searches are conducted using radii of up to 2000m.

9. Natural Hazards

Provides information on a range of natural hazards that may pose a risk to the study site. These factors include natural ground subsidence and radon..

10. Mining

Provides information on areas of coal and non-coal mining and brine affected areas.

11. Contacts

This section of the report provides contact points for statutory bodies and data providers that may be able to provide further information on issues raised within this report. Alternatively, Groundsure provide a free Technical Helpline (08444 159000) for further information and guidance.

Note: Maps

Only certain features are placed on the maps within the report. All features represented on maps found within this search are given an identification number. This number identifies the feature on the mapping and correlates it to the additional information provided below. This identification number precedes all other information and takes the following format -Id: 1, Id: 2, etc. Where numerous features on the same map are in such close proximity that the numbers would obscure each other a letter identifier is used instead to represent the features. (e.g. Three features which overlap may be given the identifier “A” on the map and would be identified separately as features 1A, 3A, 10A on the data tables provided).

Where a feature is reported in the data tables to a distance greater than the map area, it is noted in the data table as “Not Shown”.

All distances given in this report are in Metres (m). Directions are given as compass headings such as N: North, E: East, NE: North East from the nearest point of the study site boundary.

1.3 Additional Information – Historical Energy Features Database

The systematic analysis of data extracted from High Detailed 1:1,250 and 1:2,500 scale historical maps provides the following information.

Records of historical energy features within 500m of the search boundary: 4

ID	Distance (m)	Direction	Use	Date
119AI	399	SE	Electricity Substation	1982
120AI	399	SE	Electricity Substation	1982
121AI	399	SE	Electricity Substation	1972
122AI	400	SE	Electricity Substation	1972

1.4 Additional Information – Historical Petrol and Fuel Site Database

The systematic analysis of data extracted from High Detailed 1:1,250 and 1:2,500 scale historical maps provides the following information.

Records of historical petrol stations and fuel sites within 500m of the search boundary: 0

Database searched and no data found.

1.5 Additional Information – Historical Garage and Motor Vehicle Repair Database

The systematic analysis of data extracted from High Detailed 1:1,250 and 1:2,500 scale historical maps provides the following information.

Records of historical garage and motor vehicle repair sites within 500m of the search boundary: 0

Database searched and no data found.

1.6 Potentially Infilled Land

Records of Potentially Infilled Features from 1:10,000 scale mapping within 500m of the study site: 15

The following Historical Potentially Infilled Features derived from the Historical Mapping information is provided by Groundsure:

ID	Distance(m)	Direction	Use	Date
123AJ	83	W	Unspecified Heap	1983
124AK	185	W	Unspecified Heap	1983
125E	236	SW	Cuttings	1930
126E	237	SW	Cuttings	1947
127F	241	SW	Cuttings	1947

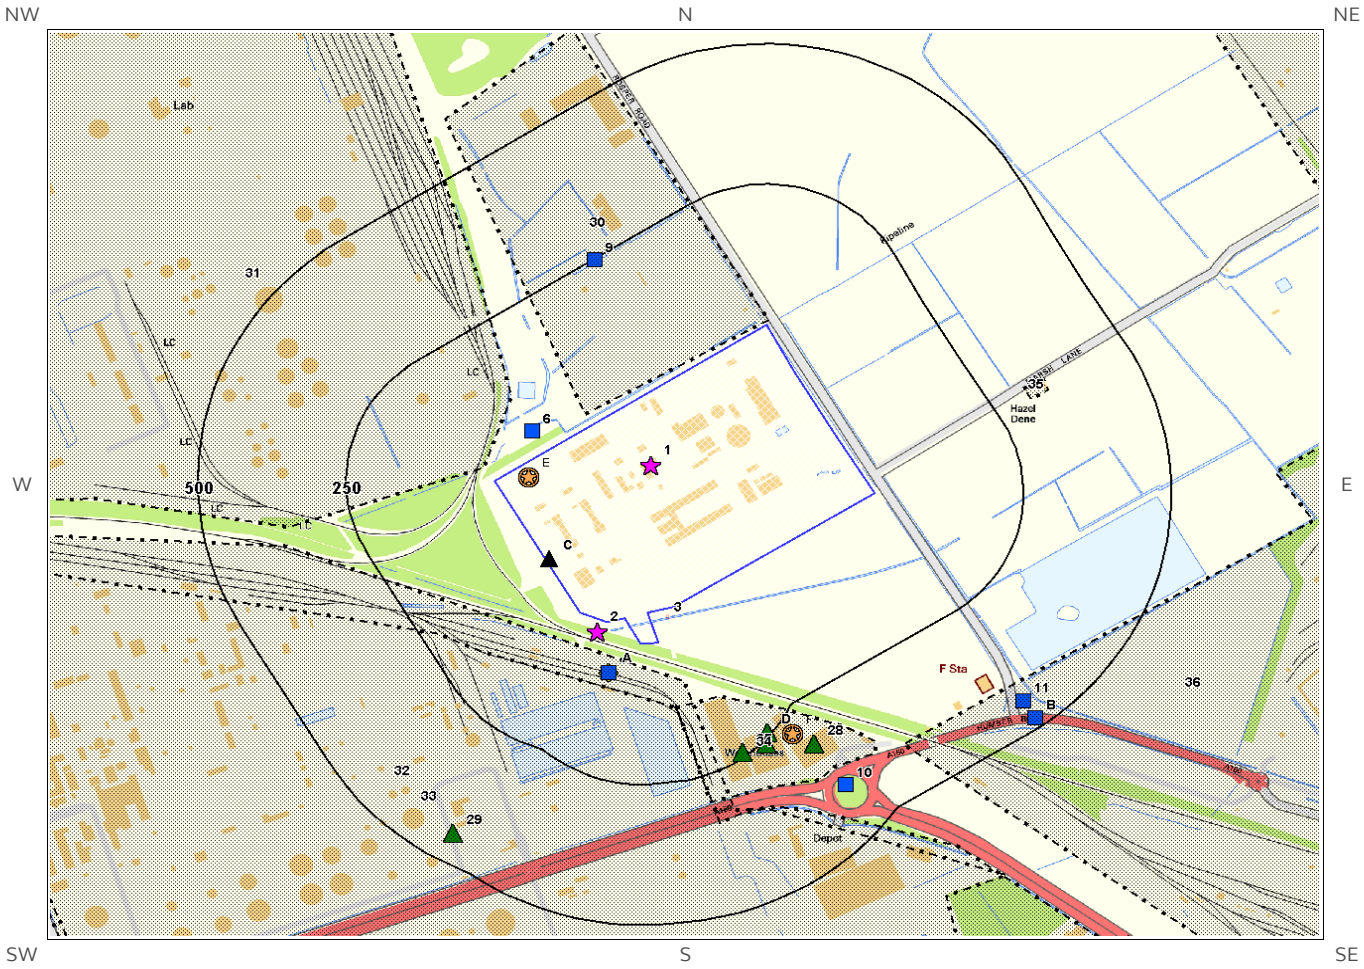
2. Environmental Permits, Incidents and Registers Map



- Site Outline
- Search Buffers (m) — 250 — 500
- Recorded Pollution Incident
- Dangerous Substances (List 1)
- Dangerous Substances (List 2)
- Water Industry Referrals
- Licenced Discharge Consents
- Red List Discharge Consents
- RAS 3 & 4 Authorisations
- Part A(1) Authorised Processes and Historic IPC Authorisations
- Part A(2) and Part B Authorised Processes
- COMAH / NIHHS Sites
- Sites Determined as Contaminated Land
- Hazardous Substance Consents and Enforcements

2. Environmental Permits, Incidents and Registers

2.1 Industrial Sites Holding Licences and/or Authorisations

Searches of information provided by the Environment Agency/Natural Resources Wales and Local Authorities reveal the following information:

2.1.1 Records of historic IPC Authorisations within 500m of the study site:

0

Database searched and no data found.

2.1.2 Records of Part A(1) and IPPC Authorised Activities within 500m of the study site:

9

The following Part A(1) and IPPC Authorised Activities are represented as points on the Environmental Permits, Incidents and Registers Map:

ID	Distance (m)	Direction	NGR	Details	
39C	0	On Site	516500 417000	Operator: Vpi Immingham Llp Installation Name: Immingham Chp Power Station Epr/bj8022iz Process: COMBUSTION; ANY FUEL =>50MW	Permit Number: YP3837GD Original Permit Number: BJ8022IZ EPR Reference: EA/EPR/BJ8022IZ/V002 Issue Date: 4/6/2009 Effective Date: 4/6/2009 00:00:00 Last date noted as effective: 2018-03-01 Status: Superceded

2.1.3 Records of Red List Discharge Consents (potentially harmful discharges to controlled waters) within 500m of the study site:

0

Database searched and no data found.

2.1.4 Records of List 1 Dangerous Substances Inventory Sites within 500m of the study site:

1

The following List 1 Dangerous Substance Inventory Site records are represented as points on the Environmental Permits, Incidents and Registers Map:

ID	Distance (m)	Direction	NGR	Details	
4A	75	SW	516600 416800	Name: Conoco Main O/f Killingholme Status: Not Active Receiving Water: River Humber, South Killingholme Drain, R. Humber	Authorised Substances: Mercury (other), Cadmium

2.1.5 Records of List 2 Dangerous Substance Inventory Sites within 500m of the study site:

1

The following List 2 Dangerous Substance Inventory Site records are represented as points on the Environmental Permits, Incidents and Registers Map:

ID	Distance (m)	Direction	NGR	Details	
5A	75	SW	516600 416800	Name: Conoco Main O/f Killingholme Status: Active Receiving Water: S Kill.drn.rosper Road	Authorised Substances: Arsenic, Chromium, Copper, Lead, Nickel, Zinc

2.1.6 Records of Part A(2) and Part B Activities and Enforcements within 500m of the study site:

5

The following Part A(2) and Part B Activities are represented as points on the Environmental Permits, Incidents and Registers Map:

ID	Distance (m)	Direction	NGR	Details	
25	245	SE	516826 416655	Address: Phillips 66 Limited, Unit 1, Humber Road, South Killingholme, DN40 3DU Process: Coal & Coke Status: Current Permit Permit Type: Part B	Enforcement: No Enforcements Notified Date of Enforcement: No Enforcements Notified Comment: No Enforcements Notified

ID	Distance (m)	Direction	NGR	Details	
26D	245	SE	516867 416691	Address: P. D. Port Services Ltd, Unit 2, Humber Road, Immingham, North East Lincolnshire, DN40 3DU Process: Coal & Coke Status: Current Permit Permit Type: Part B	Enforcement: No Enforcements Notified Date of Enforcement: No Enforcements Notified Comment: No Enforcements Notified
27D	258	SE	516866 416671	Address: P D Port Services Limited, Unit 2, Humber Road, South Killingholme, DN40 3DU Process: Coal and Coke Status: Historical Permit Permit Type: Part B	Enforcement: No Enforcements Notified Date of Enforcement: No Enforcements Notified Comment: No Enforcements Notified
28	321	SE	516947 416671	Address: P D Port Services Limited, Unit 1, Humber Road, South Killingholme, DN40 3DU Process: Coal and Coke Status: Historical Permit Permit Type: Part B	Enforcement: No Enforcements Notified Date of Enforcement: No Enforcements Notified Comment: No Enforcements Notified
29	451	SW	516336 416511	Address: Longs Steel (UK) Limited, Humber Road, South Killingholme, DN40 3DY Process: Coal & Coke Status: Current Permit Permit Type: Part A2	Enforcement: No Enforcements Notified Date of Enforcement: No Enforcements Notified Comment: No Enforcements Notified

2.1.7 Records of Category 3 or 4 Radioactive Substances Authorisations:

0

Database searched and no data found.

2.1.8 Records of Licensed Discharge Consents within 500m of the study site:

10

The following Licensed Discharge Consents records are represented as points on the Environmental Permits, Incidents and Registers Map:

ID	Distance (m)	Direction	NGR	Details	
6	42	NW	516470 417230	Address: THE INTERCEPTOR, LINDSEY OIL REFINERY, KILLINGHOLME, GRIMSBY. Effluent Type: TRADE DISCHARGES - UNSPECIFIED Permit Number: PR3NFF1242 Permit Version: 1	Receiving Water: South Killingholme Main Drain Status: PRE NRA LEGISLATION WHERE ISSUE DATE < 01-SEP-89 (HISTORIC ONLY) Issue date: 06/11/1979 Effective Date: 06-Nov-1979 Revocation Date: 10/01/1994
7A	75	SW	516600 416800	Address: AT HUMBER REFINERY, SOUTH KILLINGHOLME, SOUTH HUMBERSIDE Effluent Type: TRADE DISCHARGES - UNSPECIFIED Permit Number: PR3NFF855B Permit Version: 2	Receiving Water: South Killingholme Main Drain Status: POST NRA LEGISLATION WHERE ISSUE DATE > 31-AUG-89 (HISTORIC ONLY) Issue date: 08/05/1991 Effective Date: 08-May-1991 Revocation Date: 24/03/1994

ID	Distance (m)	Direction	NGR	Details

2.1.9 Records of Water Industry Referrals (potentially harmful discharges to the public sewer) within 500m of the study site:

0

Database searched and no data found.

2.1.10 Records of Planning Hazardous Substance Consents and Enforcements within 500m of the study site:

2

The following records are represented as points on the Environmental Permits, Incidents and Registers Map:

ID	Distance (m)	Direction	Application Reference Number	NGR	Application Status	Application Date	Address	Details	Details of Enforcement Action
48E	0	On Site	PA/2008/1704	516464 417147	Approved	02/03/2009	VPI Immingham LLP (PKA Immingham CHP Plant) Combined Heat & Power Plant, Rosper Road, South Killingholme, DN40 3DZ	Hazardous Substances Consent to store 3050 tonnes of petroleum gas oil.	Enforcement: No Enforcements Notified Date of Enforcement: No Enforcement Notified Comment: No Enforcement Notified
49F	280	SE	7/1992/0508	516910 416690	Approved	13/08/1992	Humberside Sea & Land Services Ltd, Units 1 And 2 Humber Road, South Killingholme, DN40 3DU	Ammonium Nitrate based fertilizer. Max quantity present during established period - 35000 tonnes. Established quantity - 52,500 tonnes	Enforcement: No Enforcements Notified Date of Enforcement: No Enforcement Notified Comment: No Enforcement Notified

---

2.2 Dangerous or Hazardous Sites

Records of COMAH & NIHHS sites within 500m of the study site: 7

The following COMAH & NIHHS Authorisation records provided by the Health and Safety Executive are represented as polygons or buffered points on the Environmental Permits, Incidents and Registers Map:

ID	Distance (m)	Direction	Company	Address	Operational Status	Tier
30	6	NW	VPA Immingham LLP	VPI Immingham LLP, Immingham CHP LLP, Rosper Road, Immingham, Grimsby, North East Lincolnshire, DN40 3DZ	Current COMAH Site	COMAH Lower Tier Operator

ID	Distance (m)	Direction	Company	Address	Operational Status	Tier
31	28	NW	Total Lindsey Oil Refinery Limited	Total Lindsey Oil Refinery Limited, Lindsey Oil Refinery, HQ/Total Lindsey, Eastfield Road, Immingham, North East Lincolnshire, DN40 3LW	Current COMAH Site	COMAH Upper Tier Operator
32	37	S	Phillips 66 Limited	Phillips 66 Limited, Humber Refinery, Humber Refinery, Eastfield Road, Grimsby, North Lincolnshire, DN40 3DW	Current COMAH Site	COMAH Upper Tier Operator
33	91	S	Conoco Manufacturing Ltd	Conoco Manufacturing Ltd, South Tank Farm, South Killingholme, Immingham	Historical NIHHS Site	-
34	120	S	Humberside Sea&land Services Ltd	Humberside Sea&land Services Ltd, Units1&2, Humber Road, South KillINngholme	Historical NIHHS Site	-
35	311	NE	Humber Lpg Terminal Ltd	Humber Lpg Terminal Ltd, Marsh Lane, South Killingholme, DN40 3ED	Historical COMAH Site	-
36	409	SE	Associated British Ports	Associated British Ports, Immingham Dock, Immingham Dock, Immingham, Lincolnshire, DN40 2NS	Current COMAH Site	COMAH Upper Tier Operator

2.3 Environment Agency/Natural Resources Wales Recorded Pollution Incidents

2.3.1 Records of National Incidents Recording System, List 2 within 500m of the study site:

2

The following NIRS List 2 records are represented as points on the Environmental Permits, Incidents and Registers Map:

ID	Distance (m)	Direction	NGR	Details	
1	0	On Site	516670 417170	Incident Date: 03-Oct-2002 Incident Identification: 112451 Pollutant: Atmospheric Pollutants and Effects Pollutant Description: Smoke	Water Impact: Category 4 (No Impact) Land Impact: Category 4 (No Impact) Air Impact: Category 3 (Minor)
2	22	S	516579 416873	Incident Date: 13-Dec-2004 Incident Identification: 282826 Pollutant: Oils and Fuel Pollutant Description: Crude Oil	Water Impact: Category 2 (Significant) Land Impact: Category 3 (Minor) Air Impact: Category 3 (Minor)

2.3.2 Records of National Incidents Recording System, List 1 within 500m of the study site:

1

The following NIRS List 1 records are represented as points on the Environmental Permits, Incidents and Registers Map:

ID	Distance(m)	Direction	NGR	Details	
3	15	S		Incident Date: 29-Jul-2000 Incident Identification: 7235.0 Catchments Name: SKITTER BECK (IMMINGHAM) Water Description: RIVER STRETCH (FRESHWATER) Water Course: EAST HALTON BECK Incident Substantiated: Yes	Priority Description: Immediate (2 Hours) Waste Description: Not Available Water Impact: Major (Persistent, Extensive) Impact Land Impact: Minor Impact Air Impact: No Impact Action Taken: Prosecution

2.4 Sites Determined as Contaminated Land under Part 2A EPA 1990

Records of sites determined as contaminated land under Section 78R of the Environmental Protection Act 1990 are there within 500m of the study site 0

Database searched and no data found.

4.2 Petrol and Fuel Sites

Records of petrol or fuel sites within 500m of the study site: 0

Database searched and no data found.

4.3 National Grid High Voltage Underground Electricity Transmission Cables

This dataset identifies the high voltage electricity transmission lines running between generating power plants and electricity substations. The dataset does not include the electricity distribution network (smaller, lower voltage cables distributing power from substations to the local user network). This information has been extracted from databases held by National Grid and is provided for information only with no guarantee as to its completeness or accuracy. National Grid do not offer any warranty as to the accuracy of the available data and are excluded from any liability for any such inaccuracies or errors.

Records of National Grid high voltage underground electricity transmission cables within 500m of the study site: 0

Database searched and no data found.

4.4 National Grid High Pressure Gas Transmission Pipelines

This dataset identifies high-pressure, large diameter pipelines which carry gas between gas terminals, power stations, compressors and storage facilities. The dataset does not include the Local Transmission System (LTS) which supplies gas directly into homes and businesses. This information has been extracted from databases held by National Grid and is provided for information only with no guarantee as to its completeness or accuracy. National Grid do not offer any warranty as to the accuracy of the available data and are excluded from any liability for any such inaccuracies or errors.

Records of National Grid high pressure gas transmission pipelines within 500m of the study site: 0

Database searched and no data found.

6.Hydrogeology and Hydrology

6.1 Aquifer within Superficial Deposits

Records of strata classification within the superficial geology at or in proximity to the property Yes

From 1 April 2010, the Environment Agency/Natural Resources Wales's Groundwater Protection Policy has been using aquifer designations consistent with the Water Framework Directive. For further details on the designation and interpretation of this information, please refer to the Groundsure Enviro Insight User Guide.

The following aquifer records are shown on the Aquifer within Superficial Geology Map (6a):

ID	Distance (m)	Direction	Designation	Description
2	0	On Site	Secondary (undifferentiated)	Assigned where it is not possible to attribute either category A or B to a rock type. In general these layers have previously been designated as both minor and non-aquifer in different locations due to the variable characteristics of the rock type
3	0	On Site	Unproductive	These are rock layers or drift deposits with low permeability that have negligible significance for water supply or river base flow

6.2 Aquifer within Bedrock Deposits

Records of strata classification within the bedrock geology at or in proximity to the property Yes

From 1 April 2010, the Environment Agency/Natural Resources Wales's Groundwater Protection Policy has been using aquifer designations consistent with the Water Framework Directive. For further details on the designation and interpretation of this information, please refer to the Groundsure Enviro Insight User Guide.

The following aquifer records are shown on the Aquifer within Bedrock Geology Map (6b):

ID	Distance (m)	Direction	Designation	Description
1	0	On Site	Principal	Geology of high intergranular and/or fracture permeability, usually providing a high level of water storage and may support water supply/river base flow on a strategic scale. Generally principal aquifers were previously major aquifers

6.3 Groundwater Abstraction Licences

Groundwater Abstraction Licences within 2000m of the study site — Identified

The following Abstraction Licences records are represented as points, lines and regions on the Aquifer within Bedrock Geology Map (6b):

6.4 Surface Water Abstraction Licences

Surface Water Abstraction Licences within 2000m of the study site — Identified

The following Surface Water Abstraction Licences records are represented as points, lines and regions on the Aquifer within Bedrock Geology Map (6b):

ID	Distance (m)	Direction	NGR	Details	
Not shown	1819	SE	517910 415510	Status: Historical Licence No: 4/29/09/*S/0127 Details: Make-Up Or Top Up Water Direct Source: Surface Water Source Of Supply Point: Trib. Of Habrough Marsh Drain Data Type: Point Name: IMMINGHAM TOWN COUNCIL	Annual Volume (m^3): 4092 Max Daily Volume (m^3): 46 Application No: - Original Start Date: 1/1/1985 Expiry Date: - Issue No: 100 Version Start Date: 1/4/2008 Version End Date:

6.5 Potable Water Abstraction Licences

Potable Water Abstraction Licences within 2000m of the study site — None identified

Database searched and no data found.

6.6 Source Protection Zones

Source Protection Zones within 500m of the study site — Identified

The following Source Protection Zones records are represented on the SPZ and Potable Water Abstraction Map (6c):

ID	Distance (m)	Direction	Zone	Description
1	0	On Site	3	Total catchment

6.7 Source Protection Zones within Confined Aquifer

Source Protection Zones within the Confined Aquifer within 500m of the study site — None identified

Historically, Source Protection Zone maps have been focused on regulation of activities which occur at or near the ground surface, such as prevention of point source pollution and bacterial contamination of water supplies. Sources in confined aquifers were often considered to be protected from these surface pressures due to the presence of a low permeability confining layer (e.g. glacial till, clay). The increased interest in subsurface activities such as onshore oil and gas exploration, ground source heating and cooling requires protection zones for confined sources to be marked on SPZ maps where this has not already been done.

Database searched and no data found.

6.8 Groundwater Vulnerability and Soil Leaching Potential

Environment Agency/Natural Resources Wales information on groundwater vulnerability and soil leaching potential within 500m of the study site — Identified

Distance (m)	Direction	Classification	Soil Vulnerability Category	Description
0	On Site	Major Aquifer/Low Leaching Potential	L	Soils in which pollutants are unlikely to penetrate the soil layer because either water movement is largely horizontal, or they have the ability to attenuate diffuse pollutants.
273	E	Major Aquifer/High Leaching Potential	H1	Soils which readily transmit liquid discharges because they are shallow or susceptible to rapid flow directly to rock, gravel or groundwater.

6.9 River Quality

Environment Agency/Natural Resources Wales information on river quality within 1500m of the study site — None identified

6.9.1 Biological Quality:

Database searched and no data found.

6.9.2 Chemical Quality:

Database searched and no data found.

6.10 Ordnance Survey MasterMap Water Network

Ordnance Survey MasterMap Water Network entries within 500m of the study site

This watercourse information is provided by Ordnance Survey MasterMap Water Network. The data provides a detailed centre line following the curve of the waterway precisely, so all distances provided in the report should be understood as measurements to the centreline rather than a measurement to the nearest point of the watercourse. Underground watercourses are inferred from entry and exit points so caution is advised in using these to indicate precise locations of underground watercourses when planning site investigation and development.

The following Ordnance Survey MasterMap Water Network records are represented on the Hydrology Map (6e):

ID	Distance/ Direction	Name	Type of Watercourse	Additional Details
1	0 On Site	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.5
2	0 On Site	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
3	0 On Site	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.1
4	0 On Site	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: Underground Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
5	0 On Site	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.5
6	0 On Site	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: Underground Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided

ID	Distance/ Direction	Name	Type of Watercourse	Additional Details
7	0 On Site	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.4
8	0 On Site	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: Underground Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
9	0 On Site	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.3
14	0 On Site	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.5
15	0 On Site	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
16	0 On Site	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.1
17	0 On Site	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: Underground Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
18	0 On Site	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.5
19	0 On Site	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: Underground Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
20	0 On Site	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.4
21	0 On Site	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: Underground Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
22	0 On Site	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.3

ID	Distance/ Direction	Name	Type of Watercourse	Additional Details
10	3 NE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: Underground Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
23	3 NE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: Underground Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
11	6 NE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
24	6 NE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
12	10 SE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
25	10 SE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
13	12 SW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.0
26	12 SW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.0
14	14 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.3
27	14 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.3
15	15 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.4
16	15 S	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.0

ID	Distance/ Direction	Name	Type of Watercourse	Additional Details
28	15 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.4
29	15 S	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.0
17	16 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
30	16 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
18	18 NE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
31	18 NE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
19	19 NE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.8
32	19 NE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.8
20	26 NE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 3.2
21	26 NE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.8
22	26 NE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
33	26 NE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 3.2

ID	Distance/ Direction	Name	Type of Watercourse	Additional Details
34	26 NE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.8
35	26 NE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
23	31 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
36	31 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
24	37 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
25	37 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 1.9
37	37 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
38	37 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 1.9
26	50 W	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
39	50 W	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
27	54 S	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
40	54 S	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided

ID	Distance/ Direction	Name	Type of Watercourse	Additional Details
28	69 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
41	69 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
29	72 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.0
42	72 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.0
30	77 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.2
31	77 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 1.9
43	77 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.2
44	77 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 1.9
32	78 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 3.7
45	78 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 3.7
33	79 SW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
46	79 SW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided

ID	Distance/ Direction	Name	Type of Watercourse	Additional Details
34	80 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
47	80 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
35	120 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 3.2
48	120 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 3.2
36	126 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
49	126 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
37	143 SE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.9
50	143 SE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.9
38	151 NE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
51	151 NE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
39	152 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
52	152 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided

ID	Distance/ Direction	Name	Type of Watercourse	Additional Details
40	154 NE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 1.9
53	154 NE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 1.9
41	156 W	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
54	156 W	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
42	157 NE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.3
55	157 NE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.3
43	164 W	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.8
56	164 W	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.8
44	187 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
57	187 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
45	191 SW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 4.4
58	191 SW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 4.4

ID	Distance/ Direction	Name	Type of Watercourse	Additional Details
46	202 E	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 3.0
59	202 E	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 3.0
47	203 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.6
60	203 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.6
48	226 SW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
61	226 SW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
49	241 SE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 3.4
50	241 SE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.9
62	241 SE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 3.4
63	241 SE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.9
51	248 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.5
64	248 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.5

ID	Distance/ Direction	Name	Type of Watercourse	Additional Details
52	249 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 5.4
53	249 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 4.8
54	249 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 3.1
55	249 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
56	249 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: Underground Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
65	249 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 5.4
66	249 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 4.8
67	249 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 3.1
68	249 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
69	249 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: Underground Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
57	250 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 3.1
70	250 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 3.1

ID	Distance/ Direction	Name	Type of Watercourse	Additional Details
58	255 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: Underground Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
71	255 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: Underground Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
59	257 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
72	257 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
60	260 SE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.1
73	260 SE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.1
61	261 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
62	261 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
74	261 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
75	261 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
63	263 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
76	263 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided

ID	Distance/ Direction	Name	Type of Watercourse	Additional Details
64	273 SE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
77	273 SE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
65	275 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 1.4
66	275 SE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: Underground Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
78	275 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 1.4
79	275 SE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: Underground Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
67	278 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.1
80	278 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.1
68	279 SE	-	Lake, loch or reservoir.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
81	279 SE	-	Lake, loch or reservoir.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
69	285 NE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
70	285 NE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 1.2

ID	Distance/ Direction	Name	Type of Watercourse	Additional Details
71	285 SE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.5
82	285 NE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
83	285 NE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 1.2
84	285 SE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.5
72	291 NE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 1.1
85	291 NE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 1.1
73	292 NE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 1.3
86	292 NE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 1.3
74	297 S	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
75	297 S	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
Not shown	297 S	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
Not shown	297 S	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided

ID	Distance/ Direction	Name	Type of Watercourse	Additional Details
76	299 SE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
89	299 SE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
77	300 E	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 3.0
78	300 E	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 3.0
90	300 E	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 3.0
91	300 E	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 3.0
79	305 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
92	305 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
80	326 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
93	326 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
81	340 SE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.4
Not shown	340 SE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.4

ID	Distance/ Direction	Name	Type of Watercourse	Additional Details
82	349 S	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
Not shown	349 S	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
83	360 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.1
96	360 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.1
84	366 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.1
85	366 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.4
97	366 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.1
98	366 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.4
86	367 SE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
Not shown	367 SE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
87	371 S	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
Not shown	371 S	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided

ID	Distance/ Direction	Name	Type of Watercourse	Additional Details
88	374 S	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: Underground Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
Not shown	374 S	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: Underground Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
89	392 S	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
Not shown	392 S	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
90	393 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 1.8
103	393 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 1.8
91	396 SE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
104	396 SE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
92	403 E	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.2
105	403 E	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.2
93	404 W	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
106	404 W	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided

ID	Distance/ Direction	Name	Type of Watercourse	Additional Details
94	406 SE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: Underground Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
Not shown	406 SE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: Underground Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
95	412 S	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: Underground Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
96	412 SE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
Not shown	412 S	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: Underground Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
Not shown	412 SE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
97	417 SE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.2
110	417 SE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 2.2
98	418 S	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
Not shown	418 S	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
99	419 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
112	419 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided

ID	Distance/ Direction	Name	Type of Watercourse	Additional Details
100	435 W	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
Not shown	435 W	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
101	439 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
114	439 NW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
102	440 SW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
Not shown	440 SW	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
103	442 SE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
116	442 SE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
104	449 E	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 4.6
Not shown	449 E	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): 4.6
105	456 SE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided
118	456 SE	-	Inland river not influenced by normal tidal action.	Catchment Area: Louth Grimsby and Ancholme Relationship to Ground Level: On ground surface Permanence: Watercourse contains water year round (in normal conditions) Average Width in Watercourse Section (m): Not Provided

ID	Distance/ Direction	Name	Type of Watercourse	Additional Details

250
Search Buffers (m)

Zone 2 Floodplain

Zone 3 Floodplain

Flood Defences

Area used for Flood Storage

Area Benefiting from Flood Defences

7b. Environment Agency/Natural Resources Wales Risk of Flooding from Rivers and the Sea (RoFRaS) Map

7 Flooding

7.1 River and Coastal Zone 2 Flooding

Environment Agency/Natural Resources Wales Zone 2 floodplain within 250m — Identified

Environment Agency/Natural Resources Wales Zone 2 floodplains estimate the annual probability of flooding as between 1 in 1000 (0.1%) and 1 in 100 (1%) from rivers and between 1 in 1000 (0.1%) and 1 in 200 (0.5%) from the sea. Any relevant data is represented on Map 7a – Flood Map for Planning:

ID	Distance (m)	Direction	Update	Type
1	0	On Site	19-Mar-2018	Zone 2 - (Fluvial /Tidal Models)

7.2 River and Coastal Zone 3 Flooding

Environment Agency/Natural Resources Wales Zone 3 floodplain within 250m — Identified

Zone 3 shows the extent of a river flood with a 1 in 100 (1%) or greater chance of occurring in any year or a sea flood with a 1 in 200 (0.5%) or greater chance of occurring in any year. Any relevant data is represented on Map 7a – Flood Map for Planning.

ID	Distance (m)	Direction	Update	Type
1	0	On Site	19-Mar-2018	Zone 3 - (Fluvial Models)

7.3 Risk of Flooding from Rivers and the Sea (RoFRaS) Flood Rating

Highest risk of flooding onsite — Very Low

The Environment Agency/Natural Resources Wales RoFRaS database provides an indication of river and coastal flood risk at a national level on a 50m grid with the flood rating at the centre of the grid calculated and given above. The data considers the probability that the flood defences will overtop or breach by considering their location, type, condition and standard of protection.

RoFRaS data for the study site indicates the property is in an area with a Very Low (less than 1 in 1000) chance of flooding in any given year.

Any relevant data within 250m is represented on the RoFRaS Flood map. Data to 50m is reported in the table below.

ID	Distance (m)	Direction	RoFRas flood Risk
1	0.0	On Site	Very Low
2	8.0	N	High

3	9.0	S	High
4	10.0	S	High
5	14.0	N	Very Low
6	22.0	SE	High
7	24.0	NE	High
8	24.0	NE	Low
9	26.0	NE	Low
10	30.0	NE	Very Low
11A	47.0	SE	High

7.4 Flood Defences

Flood Defences within 250m of the study site — None identified

Database searched and no data found.

7.5 Areas benefiting from Flood Defences

Areas benefiting from Flood Defences within 250m of the study site — None identified

7.6 Areas benefiting from Flood Storage

Areas used for Flood Storage within 250m of the study site — None identified

7.7 Groundwater Flooding Susceptibility Areas

7.7.1 British Geological Survey groundwater flooding susceptibility areas within 50m of the boundary of the study site — Identified

Clearwater Flooding or Superficial Deposits Flooding — Clearwater Flooding

Notes: Groundwater flooding may either be associated with shallow unconsolidated sedimentary aquifers which overlie unproductive aquifers (Superficial Deposits Flooding), or with unconfined aquifers (Clearwater Flooding).

7.7.2 Highest susceptibility to groundwater flooding in the search area based on the underlying geological conditions

Potential at Surface

Where potential for groundwater flooding to occur at surface is indicated, this means that given the geological conditions in the area groundwater flooding hazard should be considered in all land-use planning decisions. It is recommended that other relevant information e.g. records of previous incidence of groundwater flooding, rainfall, property type, and land drainage information be investigated in order to establish relative, but not absolute, risk of groundwater flooding.

7.8 Groundwater Flooding Confidence Areas

British Geological Survey confidence rating in this result	High

Notes: Groundwater flooding is defined as the emergence of groundwater at the ground surface or the rising of groundwater into man-made ground under conditions where the normal range of groundwater levels is exceeded.

The confidence rating is on a threefold scale - Low, Moderate and High. This provides a relative indication of the BGS confidence in the accuracy of the susceptibility result for groundwater flooding. This is based on the amount and precision of the information used in the assessment. In areas with a relatively lower level of confidence the susceptibility result should be treated with more caution. In other areas with higher levels of confidence the susceptibility result can be used with more confidence.

8. Designated Environmentally Sensitive Sites

Designated Environmentally Sensitive Sites within 2000m of the study site | Identified

8.1 Records of Sites of Special Scientific Interest (SSSI) within 2000m of the study site:

4

The following Site of Special Scientific Interest (SSSI) records provided by Natural England/Natural Resources Wales are represented as polygons on the Designated Environmentally Sensitive Sites Map:

ID	Distance (m)	Direction	SSSI Name	Data Source
3	1360	NE	Humber Estuary	Natural England
4	1394	NE	Humber Estuary	Natural England
5	1628	NE	Humber Estuary	Natural England
Not shown	1650	E	Humber Estuary	Natural England

8.2 Records of National Nature Reserves (NNR) within 2000m of the study site:

0

Database searched and no data found.

8.3 Records of Special Areas of Conservation (SAC) within 2000m of the study site:

1

The following Special Area of Conservation (SAC) records provided by Natural England/Natural Resources Wales are represented as polygons on the Designated Environmentally Sensitive Sites Map:

ID	Distance (m)	Direction	SAC Name	Data Source
1A	1360	NE	Humber Estuary	Natural England

8.4 Records of Special Protection Areas (SPA) within 2000m of the study site:

1

The following Special Protection Area (SPA) records provided by Natural England/Natural Resources Wales are represented as polygons on the Designated Environmentally Sensitive Sites Map:

ID	Distance (m)	Direction	SPA Name	Data Source
2A	1361	NE	Humber Estuary	Natural England

8.5 Records of Ramsar sites within 2000m of the study site:

1

The following Ramsar records provided by Natural England/Natural Resources Wales are represented as polygons on the Designated Environmentally Sensitive Sites Map:

ID	Distance (m)	Direction	Ramsar Site Name	Ramsar Site Status	Data Source
7A	1360	NE	Humber Estuary	Listed	Natural England

8.6 Records of Ancient Woodland within 2000m of the study site:

0

Database searched and no data found.

8.7 Records of Local Nature Reserves (LNR) within 2000m of the study site:

0

Database searched and no data found.

8.8 Records of World Heritage Sites within 2000m of the study site:

0

Database searched and no data found.

8.9 Records of Environmentally Sensitive Areas within 2000m of the study site:

0

Database searched and no data found.

8.10 Records of Areas of Outstanding Natural Beauty (AONB) within 2000m of the study site:

0

Database searched and no data found.

8.11 Records of National Parks (NP) within 2000m of the study site:

0

Database searched and no data found.

8.12 Records of Nitrate Sensitive Areas within 2000m of the study site:

0

Database searched and no data found.

8.13 Records of Nitrate Vulnerable Zones within 2000m of the study site:

3

The following Nitrate Vulnerable Zone records produced by DEFRA are represented as polygons on the Designated Environmentally Sensitive Sites Map:

ID	Distance (m)	Direction	NVZ Name	Data Source
8	0	On Site	Modified	DEFRA
9	214	S	Existing	DEFRA
Not shown	1780	W	Existing	DEFRA

8.14 Records of Green Belt land within 2000m of the study site:

0

Database searched and no data found.

9. Natural Hazards Findings

9.1 Detailed BGS GeoSure Data

BGS GeoSure Data has been searched to 50m. The data is included in tabular format. If you require further information on geology and ground stability, please obtain a Groundsure Geo Insight, available from our website. The following information has been found:

9.1.1 Shrink Swell

Maximum Shrink-Swell* hazard rating identified on the study site — Low

The following natural subsidence information provided by the British Geological Survey is not represented on mapping:

Hazard
Ground conditions predominantly medium plasticity. Do not plant trees with high soil moisture demands near to buildings. For new build, consideration should be given to advice published by the National House Building Council (NHBC) and the Building Research Establishment (BRE). There is a possible increase in construction cost to reduce potential shrink-swell problems. For existing property, there is a possible increase in insurance risk, especially during droughts or where vegetation with high moisture demands is present.

9.1.2 Landslides

Maximum Landslide* hazard rating identified on the study site — Very Low

The following natural subsidence information provided by the British Geological Survey is not represented on mapping:

Hazard
Slope instability problems are unlikely to be present. No special actions required to avoid problems due to landslides. No special ground investigation required, and increased construction costs or increased financial risks are unlikely due to potential problems with landslides.

9.1.3 Soluble Rocks

Maximum Soluble Rocks* hazard rating identified on the study site — Negligible

The following natural subsidence information provided by the British Geological Survey is not represented on mapping:

Hazard
Soluble rocks are present, but unlikely to cause problems except under exceptional conditions. No special actions required to avoid problems due to soluble rocks. No special ground investigation required, and increased construction costs or increased financial risks are unlikely due to potential problems with soluble rocks.

* This indicates an automatically generated 50m buffer and site.

9.1.4 Compressible Ground

Maximum Compressible Ground* hazard rating identified on the study site — Moderate

The following natural subsidence information provided by the British Geological Survey is not represented on mapping:

Hazard
Significant potential for compressibility problems. Avoid large differential loadings of ground. Do not drain or de-water ground near the property without technical advice. For new build consider possibility of compressible ground in ground investigation, construction and building design. Consider effects of groundwater changes. Extra construction costs are likely. For existing property possible increase in insurance risk from compressibility, especially if water conditions or loading of the ground change significantly.

9.1.5 Collapsible Rocks

Maximum Collapsible Rocks* hazard rating identified on the study site — Very Low

The following natural subsidence information provided by the British Geological Survey is not represented on mapping:

Hazard
Deposits with potential to collapse when loaded and saturated are unlikely to be present. No special ground investigation required or increased construction costs or increased financial risk due to potential problems with collapsible deposits.

9.1.6 Running Sand

Maximum Running Sand** hazard rating identified on the study site — Moderate

The following natural subsidence information provided by the British Geological Survey is not represented on mapping:

Hazard
Significant potential for running sand problems with relatively small changes in ground conditions. Avoid large amounts of water entering the ground (for example through pipe leakage or soak-aways). Do not dig (deep) holes into saturated ground near the property without technical advice. For new build consider the consequences of soil and groundwater conditions during and after construction. For existing property possible increase in insurance risk from running sand, for example, due to water leakage, high rainfall events or flooding.

* This indicates an automatically generated 50m buffer and site.

9.2 Radon

9.2.1 Radon Affected Areas

Is the property in a Radon Affected Area as defined by the Health Protection Agency (HPA) and if so what percentage of homes are above the Action Level? The site is not in a Radon Affected Area, as less than 1% of properties are above the Action Level.

The radon data in this report is supplied by the BGS/Public Health England and is the definitive map of Radon Affected Areas in Great Britain and Northern Ireland. The dataset was created using long-term radon measurements in over 479,000 homes across Great Britain and 23,000 homes across Northern Ireland, combined with geological data. The dataset is considered accurate to 50m to allow for the margin of error in geological lines, and the findings of this report supercede any answer given in the less accurate Indicative Atlas of Radon in Great Britain, which simplifies the data to give the highest risk within any given 1km grid square. As such, the radon atlas is considered indicative, whereas the data given in this report is considered definitive.

9.2.2 Radon Protection

Is the property in an area where Radon Protection are required for new properties or extensions to existing
ones as described in publication BR211 by the Building Research Establishment? No radon protective measures are necessary.

10. Mining

10.1 Coal Mining

Coal mining areas within 75m of the study site — None identified

Database searched and no data found.

10.2 Non-Coal Mining

Non-Coal Mining areas within 50m of the study site boundary — None identified

Database searched and no data found.

10.3 Brine Affected Areas

Brine affected areas within 75m of the study site — None identified
Guidance: No Guidance Required.

Overview of Findings

The Groundsure Geo Insight provides high quality geo-environmental information that allows geo-environmental professionals and their clients to make informed decisions and be forewarned of potential ground instability problems that may affect the ground investigation, foundation design and possibly remediation options that could lead to possible additional costs.

The report is based on the BGS 1:50,000 and 1:10,000 Digital Geological Map of Great Britain, BGS Geosure data; BRITPITS database; Non-coal mining data and Borehole Records, Coal Authority data including brine extraction areas, PBA non-coal mining and natural cavities database, Johnson Poole and Bloomer mining data and Groundsure's unique database including historical surface ground and underground workings.

For further details on each dataset, please refer to each individual section in the report as listed. Where the database has been searched a numerical result will be recorded. Where the database has not been searched '-' will be recorded.

Section 1: Geology 1:10,000 Scale		
1.1 Artificial Ground	1.1 Is there any Artificial Ground/ Made Ground present beneath the study site at 1:10,000 scale?	No
1.2 Superficial Geology and Landslips	1.2.1 Is there any Superficial Ground/Drift Geology present beneath the study site at 1:10,000 scale?*	No
	1.2.2 Are there any records of landslip within 500m of the study site boundary at 1:10,000 scale?	No
1.3 Bedrock, Solid Geology and linear features	1.3.1 For records of Bedrock and Solid Geology beneath the study site* see the detailed findings section.	
	1.3.2 Are there any records of linear features within 500m of the study site boundary at 1:10,000 scale?	No

Section 2: Geology 1:50,000 Scale		
2.1 Artificial Ground	2.1.1 Is there any Artificial Ground/ Made Ground present beneath the study site?	No
	2.1.2 Are there any records relating to permeability of artificial ground within the study site*boundary?	No
2.2 Superficial Geology and Landslips	2.2.1 Is there any Superficial Ground/Drift Geology present beneath the study site?*	Yes
	2.2.2 Are there any records of permeability of superficial ground within 500m of the study site?	Yes
	2.2.3 Are there any records of landslip within 500m of the study site boundary?	No
	2.2.4 Are there any records relating to permeability of landslips within the study site* boundary?	No

Section 2: Geology 1:50,000 Scale

2.3 Bedrock, Solid Geology and linear features	2.3.1 For records of Bedrock and Solid Geology beneath the study site* see the detailed findings section.	
	2.3.2 Are there any records relating to permeability of bedrock ground within the study site boundary?	Yes
	2.3.3 Are there any records of linear features within 500m of the study site boundary?	No

Section 3: Radon

3. Radon	3.1Is the property in a Radon Affected Area as defined by the Health Protection Agency (HPA) and if so what percentage of homes are above the Action Level?	The property is not in a Radon Affected Area, as less than 1% of properties are above the Action Level.
	3.2Radon Protection	No radon protective measures are necessary.

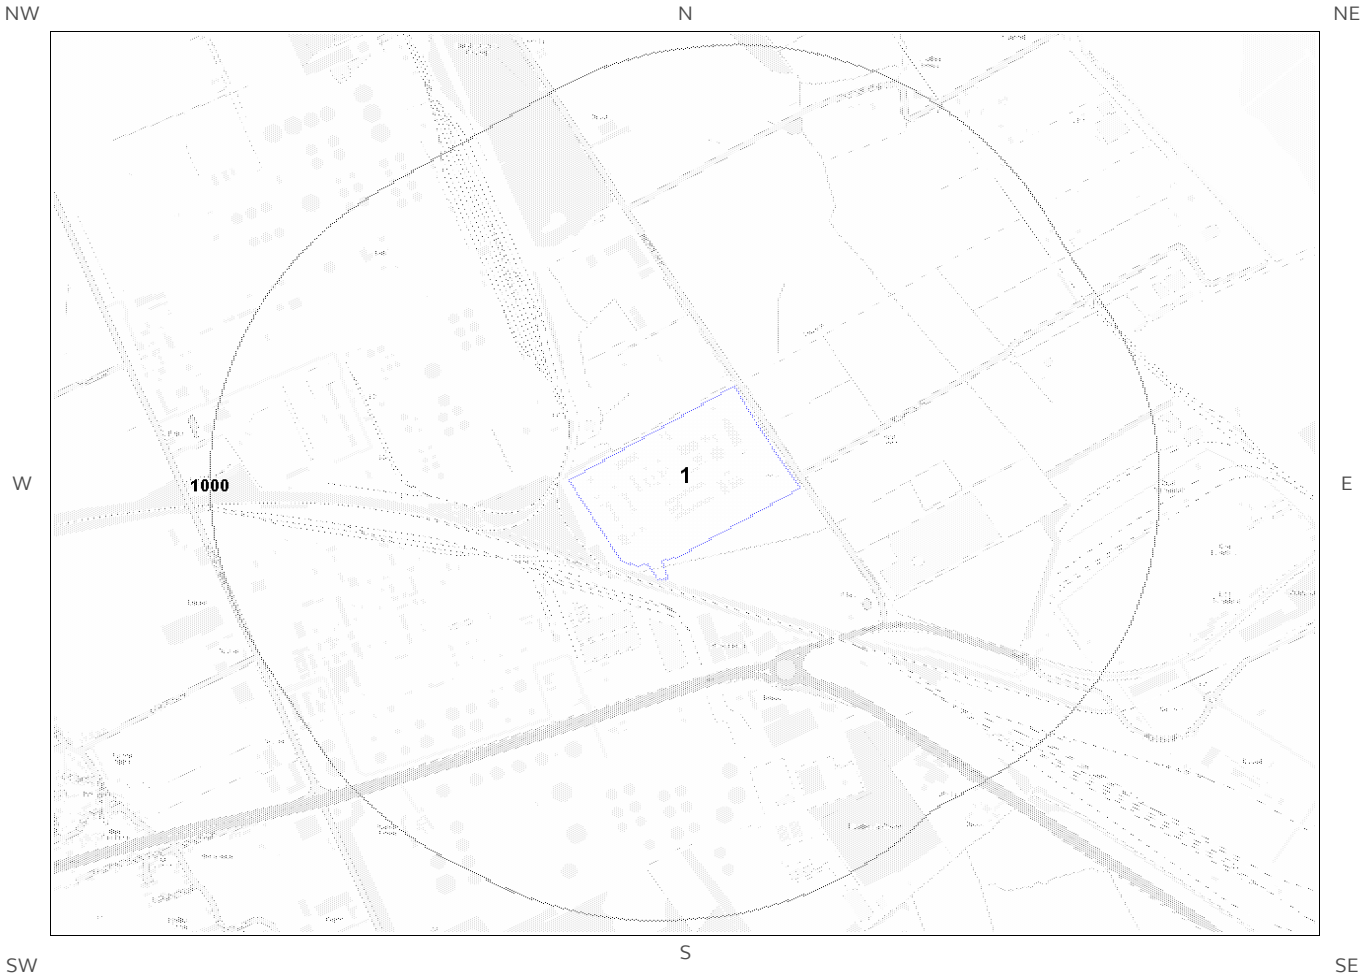
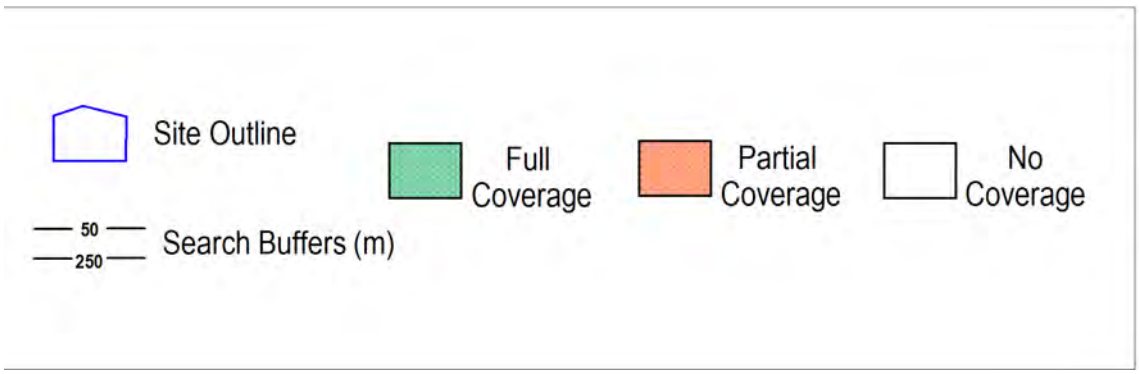
1:10,000 Scale Availability



1_10,000 Availability Legend



Availability of 1:10,000 Scale Geology Mapping

The following information represents the availability of the key components of the 1:10,000 scale geological data.

ID	Distance	Artificial Coverage	Superficial Coverage	Bedrock Coverage	Mass Movement Coverage
1	0.0	No deposits are mapped	No coverage	No coverage	No coverage

Guidance: The 1:10,000 scale geological interpretation is the most detailed generally available from BGS and is the scale at which most geological surveying is carried out in the field. The database is presented as four types of geology (artificial, mass movement, superficial and bedrock), although not all themes are mapped or available on every map sheet. Therefore a coverage layer showing the availability of the four themes is presented above.

The definitions of coverage are as follows:

Geology	Full Coverage	Partial Coverage	No Coverage
Bedrock	The whole tile has been mapped	Some but not all the tile has been mapped	No coverage
Superficial	The whole tile has been mapped	Some but not all of the tile has been mapped	No coverage
Artificial	Some deposits are mapped on this tile	-	No deposits are mapped
Mass Movement	Some deposits are mapped on this tile	-	No coverage

Search Buffers (m)

2.3 Bedrock, Solid Geology & linear features

The following geological information represented on the mapping is derived from 1:50,000 scale BGS Geological mapping, Sheet No: 081

2.3.1 Bedrock/Solid Geology

Records of Bedrock/Solid Geology within 500m of the study site boundary:

ID	Distance	Direction	LEX Code	Rock Description	Rock Age
1	0.0	On Site	BCK-CHLK	BURNHAM CHALK FORMATION - CHALK	TURONIAN

2.3.2 Permeability of Bedrock Ground

Are there any records relating to permeability of bedrock ground within the study site boundary? Yes

Distance	Direction	Flow Type	Maximum Permeability	Minimum Permeability
0.0	On Site	Fracture	Very High	Very High

2.3.3 Linear features

Are there any records of linear features within 500m of the study site boundary? No

Database searched and no data found.

The geology map for the site and surrounding area are extracted from the BGS Digital Geological Map of Great Britain at 1:50,000 scale.

This Geology shows the main components as discrete layers, these are: Bedrock/Solid Geology and linear features such as faults. These are all displayed with the BGS Lexicon code for the rock unit and BGS sheet number. Not all of the main geological components have nation wide coverage.

3 Radon Data

3.1 Radon Affected Areas

Is the property in a Radon Affected Area as defined by the Health Protection Agency (HPA) and if so what percentage of homes are above the Action Level? The property is not in a Radon Affected Area, as less than 1% of properties are above the Action Level.

The radon data in this report is supplied by the BGS/Public Health England and is the definitive map of Radon Affected Areas in Great Britain and Northern Ireland. The dataset was created using long-term radon measurements in over 479,000 homes across Great Britain and 23,000 homes across Northern Ireland, combined with geological data. The dataset is considered accurate to 50m to allow for the margin of error in geological lines, and the findings of this report supercede any answer given in the less accurate Indicative Atlas of Radon in Great Britain, which simplifies the data to give the highest risk within any given 1km grid square. As such, the radon atlas is considered indicative, whereas the data given in this report is considered definitive.

3.2 Radon Protection

Is the property in an area where Radon Protection are required for new properties or extensions to existing ones as described in publication BR211 by the Building Research Establishment? No radon protective measures are necessary.

8B	248.0	SW	516190 416977	Cuttings	1983

4.2 Historical Underground Working Features derived from Historical Mapping

This data is derived from the Groundsure unique Historical Land Use Database. It contains data derived from 1:10,000 and 1:10,560 historical Ordnance Survey Mapping and includes some natural topographical features (Shake Holes for example) as well as manmade features that may have implications for ground stability. Underground and mining features have been identified from surface features such as shafts. The distance that these extend underground is not shown.

Are there any Historical Underground Working Features within 1000m of the study site boundary? No

Database searched and no data found.

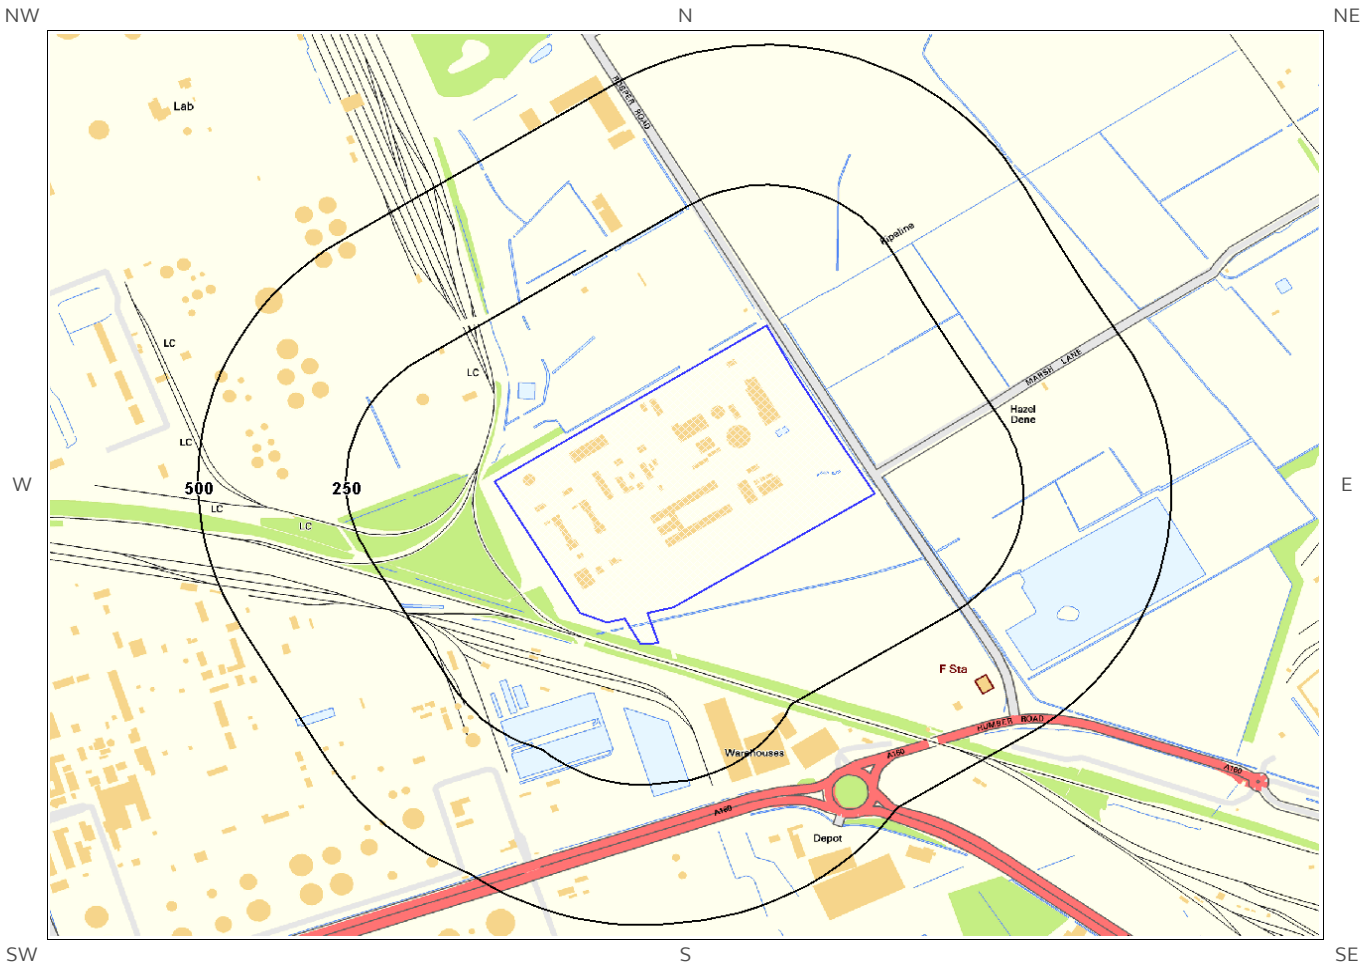
4.3 Current Ground Workings

This dataset is derived from the BGS BRITPITS database covering active; inactive mines; quarries; oil wells; gas wells and mineral wharves; and rail deposits throughout the British Isles.

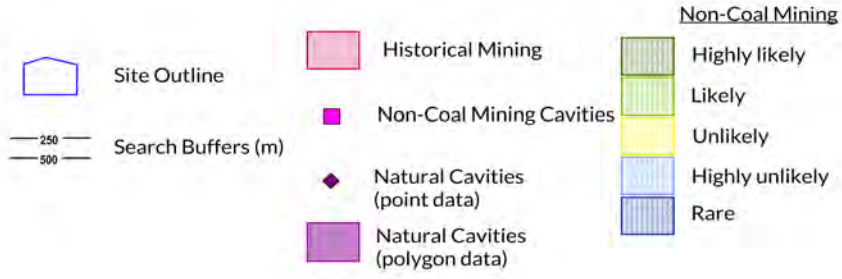
Are there any BGS Current Ground Workings within 1000m of the study site boundary? No

Database searched and no data found.

5 Mining, Extraction & Natural Cavities map



Mining, Extraction and Natural Cavities Legend



5 Mining, Extraction & Natural Cavities

5.1 Historical Mining

This dataset is derived from Groundsure unique Historical Land-use Database that are indicative of mining or extraction activities.

Are there any Historical Mining areas within 1000m of the study site boundary? No

Database searched and no data found.

5.2 Coal Mining

This dataset provides information as to whether the study site lies within a known coal mining affected area as defined by the coal authority.

Are there any Coal Mining areas within 1000m of the study site boundary? No

Database searched and no data found.

5.3 Johnson Poole and Bloomer

This dataset provides information as to whether the study site lies within an area where JPB hold information relating to mining.

Are there any JPB Mining areas within 1000m of the study site boundary? No

The following information provided by JPB is not represented on mapping: Database searched and no data found.

5.4 Non-Coal Mining

This dataset provides information as to whether the study site lies within an area which may have been subject to non-coal historic mining.

Are there any Non-Coal Mining areas within 1000m of the study site boundary? No

Database searched and no data found.

5.5 Non-Coal Mining Cavities

This dataset provides information from the Peter Brett Associates (PBA) mining cavities database (compiled for the national study entitled "Review of mining instability in Great Britain, 1990" PBA has also continued adding to this database) on mineral extraction by mining.

Are there any Non-Coal Mining cavities within 1000m of the study site boundary? No

Database searched and no data found.

5.6 Natural Cavities

This dataset provides information based on the Peter Brett Associates natural cavities database. The dataset is made up of points and polygons. Where polygons are used these represent an area in which it is expected the cavities could be found. It does not indicate that cavities are present everywhere within the polygon, and caution should be used in the interpretation of this data.

Are there any Natural Cavities within 1000m of the study site boundary? No

Database searched and no data found.

5.7 Brine Extraction

This data provides information from the Coal Authority issued on behalf of the Cheshire Brine Subsidence Compensation Board.

Are there any Brine Extraction areas within 1000m of the study site boundary? No

Database searched and no data found.

5.8 Gypsum Extraction

This dataset provides information on Gypsum extraction from British Gypsum records.

Are there any Gypsum Extraction areas within 1000m of the study site boundary? No

Database searched and no data found.

5.9 Tin Mining

This dataset provides information on tin mining areas and is derived from tin mining records. This search is based upon postcode information to a sector level..

Are there any Tin Mining areas within 1000m of the study site boundary? No

Database searched and no data found.

5.10 Clay Mining

This dataset provides information on Kaolin and Ball Clay mining from relevant mining records.

Are there any Clay Mining areas within 1000m of the study site boundary? No

Database searched and no data found.

6 Natural Ground Subsidence

The National Ground Subsidence rating is obtained through the 6 natural ground stability hazard datasets, which are supplied by the British Geological Survey (BGS).

The following GeoSure data represented on the mapping is derived from the BGS Digital Geological map of Great Britain at 1:50,000 scale.

What is the maximum hazard rating of natural subsidence within the study site*[*] boundary? Moderate

6.1 Shrink-Swell Clays

The following Shrink Swell information provided by the British Geological Survey:

ID	Distance (m)	Direction	Hazard Rating	Details
1	0.0	On Site	Low	Ground conditions predominantly medium plasticity. Do not plant trees with high soil moisture demands near to buildings. For new build, consideration should be given to advice published by the National House Building Council (NHBC) and the Building Research Establishment (BRE). There is a possible increase in construction cost to reduce potential shrink-swell problems. For existing property, there is a possible increase in insurance risk, especially during droughts or where vegetation with high moisture demands is present.
2	0.0	On Site	Very Low	Ground conditions predominantly low plasticity. No special actions required to avoid problems due to shrink-swell clays. No special ground investigation required, and increased construction costs or increased financial risks are unlikely due to potential problems with shrink-swell clays.

6.2 Landslides

The following Landslides information provided by the British Geological Survey:

ID	Distance (m)	Direction	Hazard Rating	Details
1	0.0	On Site	Very Low	Slope instability problems are unlikely to be present. No special actions required to avoid problems due to landslides. No special ground investigation required, and increased construction costs or increased financial risks are unlikely due to potential problems with landslides.

* This includes an automatically generated 50m buffer zone around the site

6.3 Ground Dissolution of Soluble Rocks

The following Ground Dissolution information provided by the British Geological Survey:

ID	Distance (m)	Direction	Hazard Rating	Details
1	0.0	On Site	Negligible	Soluble rocks are present, but unlikely to cause problems except under exceptional conditions. No special actions required to avoid problems due to soluble rocks. No special ground investigation required, and increased construction costs or increased financial risks are unlikely due to potential problems with soluble rocks.

6.4 Compressible Deposits

The following Compressible Deposits information provided by the British Geological Survey:

ID	Distance (m)	Direction	Hazard Rating	Details
1	0.0	On Site	Negligible	No indicators for compressible deposits identified. No special actions required to avoid problems due to compressible deposits. No special ground investigation required, and increased construction costs or increased financial risks are unlikely due to potential problems with compressible deposits.
2	0.0	On Site	Moderate	Significant potential for compressibility problems. Avoid large differential loadings of ground. Do not drain or de-water ground near the property without technical advice. For new build - consider possibility of compressible ground in ground investigation, construction and building design. Consider effects of groundwater changes. Extra construction costs are likely. For existing property - possible increase in insurance risk from compressibility, especially if water conditions or loading of the ground change significantly.

6.5 Collapsible Deposits

The following Collapsible Rocks information provided by the British Geological Survey:

ID	Distance (m)	Direction	Hazard Rating	Details
1	0.0	On Site	Very Low	Deposits with potential to collapse when loaded and saturated are unlikely to be present. No special ground investigation required or increased construction costs or increased financial risk due to potential problems with collapsible deposits.
2	0.0	On Site	Negligible	No indicators for collapsible deposits identified. No actions required to avoid problems due to collapsible deposits. No special ground investigation required, or increased construction costs or increased financial risk due to potential problems with collapsible deposits.

6.6 Running Sands

The following Running Sands information provided by the British Geological Survey:

ID	Distance (m)	Direction	Hazard Rating	Details
1	0.0	On Site	Moderate	Significant potential for running sand problems with relatively small changes in ground conditions. Avoid large amounts of water entering the ground (for example through pipe leakage or soak-aways). Do not dig (deep) holes into saturated ground near the property without technical advice. For new build - consider the consequences of soil and groundwater conditions during and after construction. For existing property - possible increase in insurance risk from running sand, for example, due to water leakage, high rainfall events or flooding.
2	0.0	On Site	Very Low	Very low potential for running sand problems if water table rises or if sandy strata are exposed to water. No special actions required, to avoid problems due to running sand. No special ground investigation required, and increased construction costs or increased financial risks are unlikely due to potential problems with running sand.

9 Railways and Tunnels

9.1 Tunnels

This data is derived from OpenStreetMap and provides information on the possible locations of underground railway systems in the UK - the London Underground, the Tyne & Wear Metro and the Glasgow Subway.

Have any underground railway lines been identified within the study site boundary? No

Have any underground railway lines been identified within 250m of the study site boundary? No

Database searched and no data found.

Any records that have been identified are represented on the Railways and Tunnels map.

This data is derived from Ordnance Survey mapping and provides information on the possible locations of railway tunnels forming part of the UK overground railway network.

Have any other railway tunnels been identified within the site boundary? No

Have any other railway tunnels been identified within 250m of the site boundary? No

Database searched and no data found.

Any records that have been identified are represented on the Railways and Tunnels map.

9.2 Historical Railway and Tunnel Features

This data is derived from Groundsure's unique Historical Land-use Database and contains features relating to tunnels, railway tracks or associated works that have been identified from historical Ordnance Survey mapping.

Have any historical railway or tunnel features been identified within the study site boundary? No

Have any historical railway or tunnel features been identified within 250m of the study site boundary? Yes

ID	Distance (m)	Direction	NGR	Details	Date
1A	23	SW	515726 417603	Railway Sidings	1983

ID	Distance (m)	Direction	NGR	Details	Date
7B	190	NW	516229 417676	Railway Sidings	1970

Any records that have been identified are represented on the Railways and Tunnels map.

9.3 Historical Railways

This data is derived from OpenStreetMap and provides information on the possible alignments of abandoned or dismantled railway lines in proximity to the study site.

Have any historical railway lines been identified within the study site boundary? No

Have any historical railway lines been identified within 250m of the study site boundary? No

Database searched and no data found.

Multiple sections of the same track may be listed in the detail above
Any records that have been identified are represented on the Railways and Tunnels map.

9.4 Active Railways

These datasets are derived from Ordnance Survey mapping and OpenStreetMap and provide information on the possible locations of active railway lines in proximity to the study site.

Have any active railway lines been identified within the study site boundary? No

Have any active railway lines been identified within 250m of the study site boundary? Yes

9.5 Railway Projects

These datasets provide information on the location of large scale railway projects High Speed 2 and Crossrail 1 .

Is the study site within 5km of the route of the High Speed 2 rail project?	No
Is the study site within 500m of the route of the Crossrail 1 rail project?	No

Further information on proximity to these routes, the project construction status and associated works can be obtained through the purchase of a ***Groundsure HS2 and Crossrail 1 Report****.*

The route data has been digitised from publicly available maps by Groundsure. The route as provided relates to the Crossrail 1 project only, and does not include any details of the Crossrail 2 project, as final details of the route for Crossrail 2 are still under consultation.

Please note that this assessment takes account of both the original Phase 2b proposed route and the amended route proposed in 2016. As the Phase 2b route is still under consultation, Groundsure are providing information on both options until the final route is formally confirmed. Practitioners should take account of this uncertainty when advising clients.

SOCOTEC UK Limited was formerly known as Environmental Scientifics Group Limited. The Certificate of Incorporation on Change of Name was filed on 16 October 2017.

CONTENTS

1 INTRODUCTION

In March 2018 SOCOTEC UK Limited was commissioned by AECOM Environmental Solutions Ltd (AECOM) on behalf of VPI Immingham, to carry out a ground investigation at Total Lindsey Oil Refinery (TLOR). The investigation was required to obtain geotechnical information for the proposed development.

The scope of the investigation was specified by AECOM and comprised cable percussion and rotary drilled boreholes, trial pits and laboratory testing. The investigation was performed in accordance with the contract specification, and the general requirements of BS 5930 (2015), BS EN 1997-2 (2007), BS EN ISO 22475-1 (2006) and other relevant related standards identified below. The fieldwork took place between 5 and 20 April.

This report presents the factual records of the fieldwork and laboratory testing. The information is also presented as digital data as defined in AGS (2017).

2 SITE SETTING

2.1 Location and Description

The site is adjacent to the east side of Total Lindsey Oil Refinery, approximately 4 km north west of Immingham town centre, Lincolnshire. The National Grid reference is TA 167 175, see Site Location Plan in Appendix A.

The site is a L-shaped parcel of land, approximately 350 by 200 m, and generally flat and level.

The majority of the site, the southern portion (about 350 by 120 m), comprises rough grass and scrub land, which is it is boggy in places. There are several soil mounds, up to about 5 m in height.

The north west portion is within the perimeter fence of the adjacent car park, and comprises a compacted generally flat hardcore surface with very little vegetation.

To the north the site is bound by a carpark, belonging to TLOR, and to the west is infrastructure associated with the refinery, including access roads, railway lines, plant and equipment. To the south is VPI Immingham, a power generation facility. To the east is open farmland and the Humber Estuary beyond, approximately 500 m away.

2.2 Published Geology

The published geological map for the area, BGS Sheet 90 (1990) and the BGS Geology of Britain Viewer (2018) show the site located on Glacial Till over bedrock of the Burnham Chalk Formation.

3 FIELDWORK

3.1 General

The exploratory hole locations were selected by AECOM and set out from local features. The co-ordinates and reduced levels were surveyed by SOCOTEC to National Grid and Ordnance Datum and the locations are shown on the Site Plan in Appendix A

3.2 Exploratory Holes

The exploratory holes are listed in the following table.

TABLE 1: SUMMARY OF EXPLORATORY HOLES

TYPE	QUANTITY	DEPTH RANGE (m)	REMARKS
Cable Percussion Boring	3	22.34 to 28.66	BH1, BH2 and BH5
Cable Percussion Boring extended by Rotary Core Drilling/Open Hole Drilling	3	28.60 to 34.60	BH3, BH4 and BH6
Dynamic Sampling	8	3.75 to 5.45	WS1 to WS8
Trial Pits/ Trenches	13	2.50 to 4.60	TP1 to TP10 and TT1 to TT3

The exploratory hole logs are presented in Appendix B. These provide information including the equipment and methods used, samples taken, tests carried out, water observations and descriptions of the strata encountered. Explanation of the terms and abbreviations used on the logs is given in the Key to Exploratory Hole Records in Appendix B, together with other explanatory information. The logging of soil and rock materials is in accordance with BS 5930 (2015).

Standard penetration tests (SPT) in the boreholes were carried out in accordance with BS EN ISO 22476-3+A1 (2011) and the SPT hammer energy ratio certificate is included in Appendix B. The SPT results are presented on the logs as uncorrected N values.

Photographs of the trial pits and rotary drilled core are presented in Appendix E.

On completion of the fieldwork geotechnical samples were transported to the Doncaster laboratory of SOCOTEC for testing and temporary retention.

3.3 Groundwater and Gas Monitoring

Instrumentation installed in the exploratory holes for groundwater and gas monitoring are shown on the logs and summarised in Appendix C. SOCOTEC were not required to undertake any post fieldwork.

4 LABORATORY TESTING

Geotechnical laboratory testing was scheduled by AECOM and was carried out in accordance with BS 1377 (1990), unless otherwise stated. The testing is summarised below and the results are presented in Appendix E.

- Moisture Content Determination
- Atterberg Limit Determination
- Particle Density
- Particle Size Distribution Analysis
- Unconsolidated Undrained Triaxial Compression Testing
- Consolidated Undrained Triaxial Compression Testing
- One Dimensional Oedometer Consolidation Testing
- Determination of Consolidation Properties Using a Hydraulic Cell
- Dry Density / Moisture Content Relationship
- California Bearing Ratio
- pH, Water Soluble Sulphate, Acid Soluble Sulphate and Total Sulphur Content of Soils Test methods are BS 1377 or others recognised in BRE Special Digest 1 (2005)
- Loss on Ignition
- Organic Matter

SOCOTEC

SAMPLES

Undisturbed

U	Driven tube sample	nominally 100 mm diameter and full recovery unless otherwise stated
UT	Driven thin wall tube sample	
TW	Pushed thin wall tube sample	
P	Pushed piston sample	
L	Liner sample from dynamic (windowless) sampling. Full recovery unless otherwise stated	
CBR	CBR mould sample	
BLK	Block sample	
C / CS	Core sample (from rotary core) taken for laboratory testing.	
AMAL	Amalgamated sample	

Disturbed

D	Small sample
B	Bulk sample

Other

W	Water sample
G	Gas sample
	Environmental chemistry samples (in more than one container where appropriate)
ES	Soil sample
EW	Water sample

Comments

Sample reference numbers are assigned to every sample taken. A sample reference of 'NR' indicates that, while an attempt was made to take a tube sample, there was no recovery.

Samples taken from borehole installations (ie water or gas) after hole construction are not shown on the exploratory hole logs.

Specimens for point load testing undertaken on site (or other non-lab location) are not shown on the log.

IN SITU TESTS

SPT S or SPT C — Standard Penetration Test, open shoe (S) or solid cone (C)

The Standard Penetration Test is defined in BS EN ISO 22476-3:2005+A1:2011.
The incremental blow counts are given in the Field Records column; each increment is 75 mm unless stated otherwise and any penetration under self-weight in mm (SW) is noted. Where the full 300 mm test drive is achieved the total number of blows for the test drive is presented as N = ** in the Test column. Where the test drive blows reach 50 the total blow count beyond the seating drive is given (without the N = prefix).

IV	*in situ* vane shear strength, peak (p) and remoulded (r)
HV	Hand vane shear strength, peak (p) and remoulded (r)
PP	Pocket penetrometer test, converted to shear strength
KFH, KRH, KPI	Permeability tests (KFH = falling head, KRH = rising head; KPI = packer inflow); results provided in Field Records column (one value per stage for packer tests)

DRILLING RECORDS

The mechanical indices (TCR/SCR/RQD & If) are defined in BS 5930:2015

TCR	Total Core Recovery, %
SCR	Solid Core Recovery, %
RQD	Rock Quality Designation, %
If	Fracture spacing, mm. Minimum, typical and maximum spacing measurements are presented.
NI	The term non-intact (NI) is used where the core is fragmented.
NA	Used where a measurement is not applicable (eg. If, SCR and RQD in non-rock materials).

Flush returns, estimated percentage with colour where relevant, are given in the Records column

CRF	Core recovered (length in m) in the following run
AZCL	Assessed zone of core loss

GROUNDWATER

▼	Groundwater entry
▽	Depth to groundwater after standing period

Key to Exploratory Hole Records

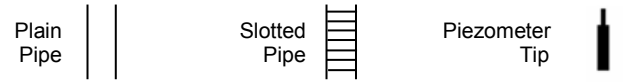
INSTALLATION

Details of standpipe/piezometer installations are given on the Record. Legend column shows installed instrument depths including slotted pipe section or tip depth, response zone filter material type and layers of backfill.

Standpipe/ piezometer

The type of instrument installed is indicated by a code in the Legend column at the depth of the response zone:

SP	Standpipe
SPIE	Standpipe piezometer
PPIE	Pneumatic piezometer
EPIE	Electronic piezometer



Inclinometer or Slip Indicator

The installation of vertical profiling instruments is indicated on the Record. The base of tubing is shown in the Legend column.

The type of instrument installed is indicated by a code in the Legend column at the base of the tubing:

ICE	Biaxial inclinometer
ICM	Inclinometer tubing for use with probe
SLIP	Slip indicator

Settlement Points or Pressure Cells

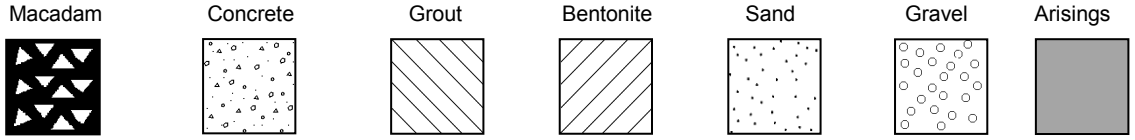
The installation of single point instruments is indicated on the Record. The location of the measuring device is shown in the Legend column.

The type of instrument installed is indicated by a code in the Legend column:

ESET	Electronic settlement cell/gauge
ETM	Magnetic extensometer settlement point
EPCE	Electronic embedment pressure cell
PPCE	Electronic push in pressure cell

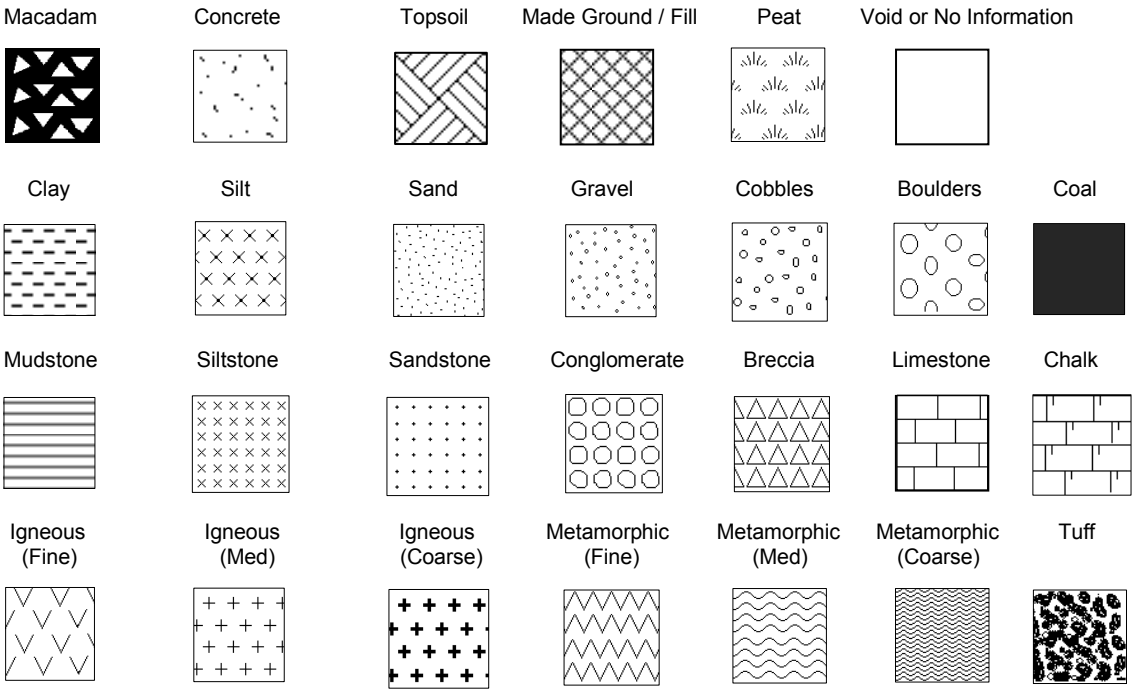
INSTALLATION / BACKFILL LEGENDS

A legend describing the installation is shown in the rightmost column. Legend symbols used to describe the backfill materials are indicated below.



STRATUM LEGENDS

The legend symbols used for graphical representation of soils, rocks and other materials on the borehole logs are shown below. For soils with significant proportions of secondary soil types, a combination of two or more symbols may be used.



Notes:

See report text for full references of standards.

Key

Key to Exploratory Hole Records

NOTES

1 Soils and rocks are described in accordance with BS EN ISO 14688-1:2002+A1:2013 and 14689-1:2003 respectively as amplified by BS 5930:2015.

2 For fine soils, consistency determined during description is reported for those strata where undisturbed samples are available. Where the logger considers that the sample may not be representative of the condition in situ, for whatever reason, the reported consistency is given in brackets. The reliability of the sample is indicated by Probably or Possibly as appropriate. Hence (Probably firm) indicates the logger is reasonably confident of the assessment, but (Possibly firm) means less certainty. Where the samples available are too disturbed to allow a reasonable assessment of the in situ condition, no consistency is given.

3 Evidence of the occurrence of very coarse particles (cobbles and boulders) is presented on the logs. However, because of their size in relation to the exploratory hole these records may not be fully representative of their size and frequency in the ground mass.

4 The declination of bedding and joints is given with respect to the normal to the core axis. Thus in a vertical borehole this will be the dip.

5 The assessment of SCR, RQD and Fracture Spacing excludes artificial fractures.

6 Observations of discernible groundwater entries during the advancement of the exploratory hole are given at the foot of the log and in the Legend column. The absence of a recorded groundwater entry should not, however, be interpreted as a groundwater level below the base of the borehole. Under certain conditions groundwater entry may not be observed, for instance, drilling with water flush or overwater, or boring at a rate faster than water can accumulate in the borehole. Similarly, where water entry observations do exist, groundwater may also be present at higher elevations in the ground than where recorded in the borehole. In addition, where appropriate, water levels in the hole at the time of recovering individual samples or carrying out in situ tests and at shift changes are given in the Records column.

7 The borehole logs present the results of Standard Penetration Tests recorded in the field without correction or interpretation. However, in certain ground conditions (eg high hydraulic head or where very coarse particles are present) some judgement may be necessary in considering whether the results are representative of in situ mass conditions.

General notes: Tests carried out in accordance with BS1377: Part 7: 1990, clause 8 for single stage, clause 9 for multistage tests. Specimens nominally 2:1 height diameter ratio and tested at a rate of strain of 2%/minute, unless annotated otherwise. Latex rubber membrane used and membrane correction applied in accordance with BS1377-7 8.5.1.4 unless stated.

Site A8015-18 VPI Immingham
Report No S187041

Consignment No S75653
Date Logged 23-Jun-2018
In-House Report Due 29-Jun-2018

Please note the results for any subcontracted analysis (identified with a '^') is likely to take up to an additional five working days.

ID Number	Description	MethodID	CustServ	ORGMAT
		Sampled	REPORT A	Organic Matter %
CL/1910777	BH4 1.20-1.65	D	D	D
CL/1910778	TP02 0.30	D	D	D
CL/1910779	BH5 2.90-3.35	D	D	D
CL/1910780	BH2 0.60	D	D	D

Note: We will endeavour to prioritise samples to complete analysis within holding time; however any delay could result in samples becoming deviant whilst being processed in the laboratory.

If sampling dates are missing or matrices unclassified then results will not be ISO 17025 accredited. Please contact us as soon as possible to provide missing information in order to reinstate accreditation.

Deviating Sample Key	
A	The sample was received in an inappropriate container for this analysis
B	The sample was received without the correct preservation for this analysis
C	Headspace present in the sample container
D	The sampling date was not supplied so holding time may be compromised - applicable to all analysis
E	Sample processing did not commence within the appropriate holding time
F	Sample processing did not commence within the appropriate handling time

Requested Analysis Key	
	Analysis Required
	Analysis dependant upon trigger result - **Note: due date may be affected if triggered**
	No analysis scheduled
^	Analysis Subcontracted - **Note: due date may vary**

Where individual results are flagged see report notes for status.

 The integrity of data for samples/analysis that have been categorised as Deviating may be compromised. Data may not be representative of the sample at the time of sampling.

Method Descriptions

Matrix	MethodID	Analysis Basis	Method Description
Soil	ORGMAT	Oven Dried @ < 35°C	Acid Dichromate oxidation of the sample followed by colorimetric analysis of the extract

Where individual results are flagged see report notes for status.

Report Notes

Generic Notes

Soil/Solid Analysis

Unless stated otherwise,
- Results expressed as mg/kg have been calculated on the basis indicated in the Method Description table.
  All results on MCERTS reports are reported on a 105ºC dry weight basis with the exception of pH and conductivity.
- Sulphate analysis not conducted in accordance with BS1377
- Water Soluble Sulphate is on a 2:1 water:soil extract

Waters Analysis

Unless stated otherwise results are expressed as mg/l

Nil: Where "Nil" has been entered against Total Alkalinity or Total Acidity this indicates that a measurement was not required due to the inherent pH of the sample.

Oil analysis specific

Unless stated otherwise,
- Results are expressed as mg/kg
- SG is expressed as g/cm^3@ 15^{o}C

Gas (Tedlar bag) Analysis

Unless stated otherwise, results are expressed as ug/l

Asbestos Analysis

CH Denotes Chrysotile **TR** Denotes Tremolite
CR Denotes Crocidolite **AC** Denotes Actinolite
AM Denotes Amosite **AN** Denotes Anthophylite
NAIIS No Asbestos Identified in Sample
NADIS No Asbestos Detected In Sample

$$ Unable to analyse due to the nature of the sample
¶ Samples submitted for this analyte were not preserved on site in accordance with laboratory protocols. This may have resulted in deterioration of the sample(s) during transit to the laboratory. Consequently the reported data may not represent the concentration of the target analyte present in the sample at the time of sampling
¥ Results for guidance only due to possible interference
& Blank corrected result
I.S Insufficient sample to complete requested analysis
I.S(g) Insufficient sample to re-analyse, results for guidance only
Intf Unable to analyse due to interferences
N.D Not determined **N.Det** Not detected
N.F No Flow
NS Information Not Supplied
Req Analysis requested, see attached sheets for results
Þ Raised detection limit due to nature of the sample
***** All accreditation has been removed by the laboratory for this result
‡ MCERTS accreditation has been removed for this result
§ accreditation has been removed for this result as it is a non-accredited matrix

Note: The Laboratory may only claim that data is accredited when all of the requirements of our Quality System have been met. Where these requirements have not been met the laboratory may elect to include the data in its final report and remove the accreditation from individual data items if it believes that the validity of the data has not been affected. If further details are required of the circumstances which have led to the removal of accreditation then please do not hesitate to contact the laboratory.

TEST REPORT

Report No. EFS/187902 (Ver. 1)

SOCOTEC UK Doncaster
Askern Road
Carcroft
Doncaster
South Yorkshire
DN6 8DG

Site: A8015-18 VPI Immingham

The 1 sample described in this report were registered for analysis by SOCOTEC UK Limited on 19-Jul-2018. This report supersedes any versions previously issued by the laboratory.

The analysis was completed by: 25-Jul-2018

The following tables are contained in this report:

On behalf of
SOCOTEC UK Lim[redacted]
Tim Barnes Operations Director
Energy & Waste Services

Date of Issue: 25-Jul-2018

Tests marked '^' have been subcontracted to another laboratory.

Where samples have been flagged as deviant on the Analytical and Deviating Sample Overview, for any reason, the data may not be representative of the sample at the point of sampling and the validity of the data may be affected. SOCOTEC UK Limited accepts no responsibility for any sampling not carried out by our personnel.

Where individual results are flagged see report notes for status.

Analytical and Deviating Sample Overview

Customer SOCOTEC UK Doncaster
Site A8015-18 VPI Immingham
Report No S187902

Consignment No S75653
Date Logged 19-Jul-2018
In-House Report Due 25-Jul-2018

Please note the results for any subcontracted analysis (identified with a '^') is likely to take up to an additional five working days.

ID Number	Description	MethodID	CustServ	ORGMAT
		Sampled	REPORT A	Organic Matter %
CL/1914695	BH1 1.65-1.80	D	D	D

Note: We will endeavour to prioritise samples to complete analysis within holding time; however any delay could result in samples becoming deviant whilst being processed in the laboratory.

If sampling dates are missing or matrices unclassified then results will not be ISO 17025 accredited. Please contact us as soon as possible to provide missing information in order to reinstate accreditation.

Deviating Sample Key	
A	The sample was received in an inappropriate container for this analysis
B	The sample was received without the correct preservation for this analysis
C	Headspace present in the sample container
D	The sampling date was not supplied so holding time may be compromised - applicable to all analysis
E	Sample processing did not commence within the appropriate holding time
F	Sample processing did not commence within the appropriate handling time

Requested Analysis Key	
	Analysis Required
	Analysis dependant upon trigger result - **Note: due date may be affected if triggered**
	No analysis scheduled
^	Analysis Subcontracted - **Note: due date may vary**

Where individual results are flagged see report notes for status.

 The integrity of data for samples/analysis that have been categorised as Deviating may be compromised. Data may not be representative of the sample at the time of sampling.

Method Descriptions

Matrix	MethodID	Analysis Basis	Method Description
Soil	ORGMAT	Oven Dried @ < 35°C	Acid Dichromate oxidation of the sample followed by colorimetric analysis of the extract

Where individual results are flagged see report notes for status.

Report Notes

Generic Notes

Soil/Solid Analysis

Unless stated otherwise,
- Results expressed as mg/kg have been calculated on the basis indicated in the Method Description table.
  All results on MCERTS reports are reported on a 105ºC dry weight basis with the exception of pH and conductivity.
- Sulphate analysis not conducted in accordance with BS1377
- Water Soluble Sulphate is on a 2:1 water:soil extract

Waters Analysis

Unless stated otherwise results are expressed as mg/l

Nil: Where "Nil" has been entered against Total Alkalinity or Total Acidity this indicates that a measurement was not required due to the inherent pH of the sample.

Oil analysis specific

Unless stated otherwise,
- Results are expressed as mg/kg
- SG is expressed as g/cm^3@ 15^{o}C

Gas (Tedlar bag) Analysis

Unless stated otherwise, results are expressed as ug/l

Asbestos Analysis

CH Denotes Chrysotile **TR** Denotes Tremolite
CR Denotes Crocidolite **AC** Denotes Actinolite
AM Denotes Amosite **AN** Denotes Anthophylite
NAIIS No Asbestos Identified in Sample
NADIS No Asbestos Detected In Sample

Symbol Reference

^ Sub-contracted analysis.

Limitations

AECOM Infrastructure & Environment UK Limited ("AECOM") has prepared this Report for the sole use of **Vitol Power International** ("Client") in accordance with the terms and conditions of appointment (**Project number: 60569745**) dated **24/08/2018**. No other warranty, expressed or implied, is made as to the professional advice included in this Report or any other services provided by AECOM. This Report may not be relied upon by any other party without the prior and express written agreement of AECOM.

Where any conclusions and recommendations contained in this Report are based upon information provided by others, it has been assumed that all relevant information has been provided by those parties and that such information is accurate. Any such information obtained by AECOM has not been independently verified by AECOM, unless otherwise stated in the Report. AECOM accepts no liability for any inaccurate conclusions, assumptions or actions taken resulting from any inaccurate information supplied to AECOM from others.

The methodology adopted and the sources of information used by AECOM in providing its services are outlined in this Report. The work described in this Report was undertaken between **[10/4/18]** and **[31/8/18]** and is based on the conditions encountered and the information available during the said period of time. The scope of this Report and the services are accordingly factually limited by these circumstances. AECOM disclaim any undertaking or obligation to advise any person of any change in any matter affecting the Report, which may come or be brought to AECOM's attention after the date of the Report.

The exploratory holes carried out during the fieldwork, which investigate only a small volume of the ground in relation to the size of the site, can only provide a general indication of site conditions. The comments made and recommendations given in this Report are based on the ground conditions apparent at the site of the exploratory holes. There may be exceptional ground conditions elsewhere on the site which have not been disclosed by this investigation and which have therefore not been taken into account in this Report.

The comments made on groundwater conditions are based on observations made during site work and the limited monitoring programme. It should be noted that groundwater levels might vary owing to seasonal or other effects.

The site reconnaissance consisted of a general external inspection of the site aimed at identifying any obvious signs of geotechnical hazards and potential sources of ground contamination affecting the site.

Any risks identified in this Report are perceived risks, based on the information reviewed during the desk study and therefore partially based on conjecture from available information. The study is limited by the non-intrusive nature of the work and actual risks can only be assessed following a physical investigation of the site.

The investigation itself was designed generally to meet the objectives of an exploratory investigation, as defined by BS10175:2011 Investigation of Potentially Contaminated Sites: Code of Practice (BSI). As an exploratory, the results may not provide sufficient data to make detailed estimates of the quantities involved in any remediation work, if required.

The opinions expressed in this Report concerning any contamination found and the risks arising there from are based on current good practice simple statistical assessment and comparison with available soil guideline values, AECOM generic assessment criteria and other guidance values.

It should be noted that the effects of ground and water borne contamination on the environment are constantly under review, and authoritative guidance values are potentially subject to change. The conclusions presented herein are based on the guidance values available at the time this Report was prepared, however, no liability by AECOM can be accepted for the retrospective effects of any changes or amendments to these values.

EXECUTIVE SUMMARY

	Conclusions	Recommendations
Ground Conditions	The results of the 2018 ground investigation by SOCOTEC UK Ltd shows that the site consists of up to 1.7m thickness of variable cohesive and granular Made Ground, underlain by cohesive Glacial Till with occasional layers of Glacial Sands and Gravels. The cohesive Glacial Till is typically described as firm to stiff, sandy, gravelly, clay with a low to medium compressibility index. A number of boreholes encountered highly weathered chalk from the Burnham Chalk Formation between the depths of 21.5m bgl and 27.5m bgl. Without geotechnical laboratory testing information available for the chalk formation, it is not possible to provide characteristic parameters. Borehole records and in-situ tests for the cohesive and granular Made Ground show that the material is highly variable and conservatively classified as soft or loose. As a conservative assumption, the occasional Glacial Sands and Gravels layers have not been included in the parameter determination process. Borehole descriptions and geotechnical tests show that the Glacial Till is firm, becoming very stiff with depth material. Depending on the foundation solution and limiting criteria, the Glacial Till can be deemed as a relatively competent material. Further assessments can be undertaken at specific locations within the site to refine the engineering parameters and ground models presented in this report.	Caution should be taken when selecting engineering and construction solutions which interact with the Made Ground material. The performance of structures founded in made ground is difficult to predict due to its variable nature. Should engineering solutions, such as piles, need to penetrate the Burnham Chalk Formation, further GI information will be required to develop a safe design.
Building Foundations	Both spread and piled foundation solutions may be considered for the proposed structures for the site. Foundation selection will depend on proposed loadings, foundation geometry and structural tolerance to total and differential settlement. Bearing resistance and tolerance to settlement will need to be considered for any spread foundations. Spread foundations should be located within natural ground below any fill or Made Ground, and founded below the depth of effect of variations due to vegetation, seasonal and climatic change. Piled foundations may be considered for structures depending on proposed loadings, foundation geometry or where settlement tolerances is an issue, or where spread foundations are found to be unsuitable. Piles may derive capacity from a combination of skin friction and end bearing in the superficial soils. Two design approaches can be adopted for piled foundations; placing the buildings on individual pile caps/rafts or creating a piled raft to cover large sections of the site. A piled raft will require a larger quantity of construction work but will ensure a stable design which will limit differential settlements between the buildings.	When considering shallow foundations, any soft, loose or deleterious deposits encountered at formation level should be removed and backfilled with suitable engineered fill or mass concrete. Should the piles need to penetrate the Burnham Chalk Formation, further GI information will be required to develop a safe design. Continuous Flight Auger (CFA) would be the preferred piling method for the assessed ground conditions. However, advice should be obtained from a specialist piling contractor before confirming a final design.

	Individual pile caps/rafts for separate buildings will allow for more flexibility in the pile design and enable costs to be optimised.	
Excavations & Earthworks	Soft, loose or deleterious material will require to be removed from under proposed structures. Considering the variable groundwater levels obtained from installations within the superficial deposits, and in view of the likelihood that long term equilibrium groundwater levels have not been recorded during the brief monitoring period, provision should be made for pumping from sumps to control ingress of groundwater into excavations in the event that water bearing granular bodies are encountered. Excavation should be possible using conventional site plant.	All excavations should be battered back to a safe angle as determined on site or be provided with close/continuous support and or stabilisation measures. Any temporary excavated slopes which are likely to receive fill are to be benched prior to filling. If earthworks are proposed it is recommended that slope stability analyses are undertaken at detailed design stage to establish maximum permissible slope angles. It is recommended that provision is made for pumping from sumps to control ingress of groundwater into excavations in the event that water bearing granular bodies are encountered
Retaining Walls	Similar to spread foundations, foundations for retaining walls should be located within natural ground below any fill and Made Ground.	If any soft, loose or deleterious deposits are encountered at foundation and or formation level, these should be removed and backfilled with well compacted suitable engineered fill or mass concrete. Due to the low permeability of the Glacial Tills, it is possible that the equilibrium water levels within the standpipes have not yet been reached, therefore a conservative approach is recommended for the selection of design groundwater levels for retaining wall design. Groundwater levels should continue to be monitored at monthly intervals to determine equilibrium levels and seasonal variations prior to detailed design. Adequate drainage measures to the rear of retaining walls should be designed to prevent the build-up of water pressure against the retaining walls.
Infrastructure	Levels of Sulphate and pH which can aggressively attack concrete have been identified for the section. Potentially toxic and corrosive chemicals and elements have been encountered in both total soils testing and leachate samples taken in this section that may pose a risk to new/ diverted water supply pipes.	The recommended design class sulphate and ACEC Classification for various concrete structures are presented below **Stratum** / **Undisturbed ground Classification** / **Disturbed ground Classification** Made Ground / DS-2, AC-2 / DS-2, AC-2 Glacial Deposits / DS-1, AC-1 / DS-3, AC-3 Advice should be sought from United Utilities, including completing their risk assessment process, to assist in the specification of drinking water supply pipes prior to installation.

Human Health	Risk assessment based on conservative assumptions does not indicate any risk to human health for the current or proposed land use. An appropriate CEMP and the use of standard PPE will be sufficient to protect construction workers from contact with substances present in the soil, given the concentrations encountered during the ground investigation	No remedial actions are required to protect current site users or future site users from substances in the soils. The stage 2 risk assessment does not assess the specific risks to construction workers, but appropriate PPE and CEMP precautions will be sufficient to mitigate risk to construction works.
Groundwater	Assessment of risks to controlled waters from leachable (soluble) concentrations of potentially polluting substances in soil, when compared conservatively against DWS and EQS, show a number of exceedances. However, this is not reflected in the groundwater below the site and the distance to sensitive surface waters makes the possibility of harm to sensitive controlled waters from leachable soil substances unlikely. There are concentrations above the relevant screening criteria for a variety of contaminants in the soils below the site and deep foundations may create pathways through less permeable layers from the unsaturated zone to sensitive groundwater below. However the risks associated with deep foundations can be mitigated by means of risk assessment specific to the design and construction proposals.	No remedial measures are required on site to protect controlled waters. However any piles should be designed in accordance with the EA guidance entitled *Piling and Penetrative Ground Improvement Methods on Land Affected by Contamination: Guidance on Pollution Prevention (2001)*
Ground Gas	A preliminary assessment of measured gas concentrations and flow rates in accordance with BS8485:20015 has determined that the overall 'Characteristic Gas Classification' for the site is Category 2.. This is a category defining a low to moderate risk which would necessitate a relatively low level of protection against the ingress of gas to confined spaces in the development. Bs8485 provides guidance on the design of protective measures against the ingress of ground gas based upon a system of scores related to the level of risk prevalent at the site. It is considered that in accordance with published guidance and BS8485, the majority of the proposed power generation plant and buildings on site would fall into a Type D industrial style buildings which for a CS2 will require gas protection sufficient to reach a score of 1.5.. However any smaller ancillary buildings will be classified as type C which will require measures sufficient to achieve a score of 2.5. However if Made Ground is removed as part of the pre-construction works the site would classify as CS1 where no protection measures are required.	Where required ground gas protection measures as defined in BS8485 should be incorporated in the buildings. Standard good health and safety practice and PPE should be specified within the Construction Phase Plan in order to protect construction workers from gas within confined spaces.
Ecological Receptors	The Humber Estuary and Rosper Road Pools represent ecological receptors, but the distance to the receptor is such that harm is unlikely to be caused.	Although it is not considered the site is a significant risk to statutory ecological receptors . a landscape architected should be provided with the chemical analysis in order to establish suitable plant species for the site.
Reuse of material		Material encountered during construction works that is considered to be potentially contaminated through visual or olfactory evidence, or different to that assessed in the ground investigation will require chemical testing to confirm suitability for reuse.
Imported Materials		Imported material (e.g. fill, etc.) will require chemical and geotechnical testing before being brought onto site to demonstrate that it is suitable for use. The testing suite and frequency, along with validation requirements, should be agreed with the Contaminated land Officer at the Local Authority prior to importation of material.

1. Introduction

1.1 Terms of Appointment

AECOM were appointed by VPI Immingham LLP to undertake works comprising a ground investigation and interpretive report as described in the Ground investigation Fee Proposal Dated 02/03/18.

1.2 Background

The current Vitol Power International (VPI) Immingham LLP Combined Heat and Power plant (CHP) has been operational since 2004. The CHP plant produces steam which is supplied to the nearby Humber and Lindsey Oil Refineries. : It is understood that the CHP will be extended to the north of the site for the development of several gas fired power generation and storage projects including reciprocating engines and an Open Cycle Gas Turbine (OCGT) plant.. The development land is occupied by a car park and an area of open, hummocky land occupied by several vegetated mounds and ponded water in wet periods. The site location can be found in, and the proposed development can be found in Appendix A.

1.3 Scope and objective of the report

This Phase 2 Ground Investigation is concerned with the ground conditions at the proposed construction site of a new power generation and plant and buildings adjacent to the Humber and Lindsey Oil Refineries at Immingham, Humberside.

A ground investigation was undertaken to assist with the design of the proposals, including laboratory testing to determine soil properties and the installation of monitoring instruments to determine groundwater behaviour.

AECOM was commissioned by VPI Immingham LLP to provide design, management and full time technical oversight of the ground investigation works, which were completed by Socotec in April 2018; and to provide an interpretative and advisory report on the ground conditions in relation to development proposals.

The Ground Investigation comprised cable percussion and rotary drilled boreholes, trial pits and laboratory testing. The investigation was performed in accordance with the contract specification, and the general requirements of Eurocode 7, BS5930 (5930)and BS EN ISO 22475-1 (2006).

Following receipt of Socotec's factual report and the results of the laboratory testing, AECOM prepared a draft Geo-environmental and Geotechnical Interpretative Report. This includes an initial assessment of the results of the geotechnical testing and a discussion of possible foundation solutions and highways and pavement specification. The results of contamination testing of soil and groundwater samples have been screened against Stage 2 generic assessment criteria for human health and controlled waters receptors and provides an update to the conceptual site model outlined in the AECOM report *"VPI Immingham Phase I Geo-environmental Assessment"* (June 2017,).

1.4 Proposed Intrusive Investigation

Based on the findings of the Phase 1 desk study report and our understanding of the objectives for the site investigation and proposed redevelopment at the site, AECOM proposed the following scope for the ground investigation;

- GPR survey to make sure that the proposed exploratory locations were free from services;
- Drilling of six cable percussion boreholes to bedrock with potential follow on rotary coring to obtain samples of soil and rock for analysis of chemical and geotechnical properties, and installation of groundwater monitoring wells;
- Drilling of up to eight windowless samples into the underlying glacial till using dynamic sampling techniques to obtain in situ data, i.e. standard penetration testing (SPT), soil samples for chemical analysis and installation of gas/ groundwater wells;

- Excavation of up to ten trial pits and three trial trenches across the site to investigate potential made ground deposits present at the site including two large stockpiles;
- Installation of up to fourteen gas / groundwater monitoring wells;
- Logging of boreholes and trial pits in accordance with Eurocode 7;
- Headspace analysis of VOCs using a portable ionisation detector (PID);
- Well development to purge water and fines entrained in the filter pack during drilling;
- Completion of three gas / groundwater monitoring events including collection of groundwater samples;
- Analysis of soil and groundwater samples for a range of determinands and potential contaminants including heavy metals, Polycyclic Aromatic Hydrocarbons (PAHs), Total Petroleum Hydrocarbons Criteria Working Group, (TPH-CWG), asbestos, Volatile Organic Compounds (VOCs) and semi-Volatile Organic Compounds (SVOCs), major anions, and organic matter;
- Provisional characterisation of soils in stockpiles to assess waste classification in the event that offsite disposal is required;
- Analysis of soil and groundwater samples for analysis of BRE suite to assess concrete classification;
- Laboratory testing of soil and rock strength parameters, likely to include plasticity limits, particle size distribution, bulk and dry density testing, compaction and triaxial compression testing, and point load testing. The exact nature of the testing will be subject to the ground conditions encountered;
- Preparation of a factual site investigation report, detailing the works completed and including logs, photos and laboratory data;

Following receipt of the Factual Report from Socotec prepare a Phase 2 interpretative report including;

  - a detailed reassessment of the initial Conceptual Site Model (CSM), pollutant linkages and preliminary risk assessment, and an estimation and characterisation of the risks to a potential site development from contamination;
  - outline recommendations for risk mitigation;
  - identify need for additional investigation or remediation.

2. Existing Information

Existing information is discussed in the AECOM report *"VPI Immingham Phase I Geo-environmental Assessment"*, and is summarised here.

2.1 Site Description

The site is located off Rosper Road, Immingham, North East Lincolnshire (see Appendix A, Figure 1), and is approximately 2 km east of South Killingholme. The site is centred on National Grid Reference (NGR) TA 516641 618468.

The site is surrounded by a mix of industrial and agricultural land use, namely the Lindsey Oil Refinery to the North West, which is operated by Total Ltd. To the South West is the Phillips 66 Humber refinery. Directly to the east is agricultural land and the River Humber is located approximately 1.3km from the site. The current VPI Immingham site is located directly to the south of the proposed development site.

2.1.1 Site Layout

The site occupies a total area of approximately 5 hectares (ha). The northern area of the site is currently occupied by a car park and canteen building present in the northwest which may be removed prior to construction. The southern half of site is covered in shrubbery/ grassland and contains various stockpiles believed to be from previous development including construction on the refinery land. The site is bounded to the east by Rosper Road and to the south by the current VPI Immingham CHP plant. Immingham Port is located approximately 2.5km to the South East and the River Humber is located approximately 1.3km to the east.

2.1.2 Surrounding Land Use

Based on site reconnaissance the land use immediately surrounding the site was assessed and is summarised below:

- North: Directly north of the site there is an access road which links the Lindsey Oil Refinery and Rosper Road. Beyond this, various utility buildings belonging to the Oil Refinery as well as unoccupied parcels of land are present.
- East: An unnamed drain and Rosper Road are directly east of the site, beyond which there are agricultural fields.
- West: To the west of the site mapping shows a settling tank, pond, electricity pylon as well as a railway track linking into the Lindsey Oil Refinery
- South: A utility line containing gas and liquid hydrocarbon pipes is present to the south, separating the site and the current VPI Immingham CHP plant.

2.2 Anticipated Geology

The anticipated geology of the site was assessed through examination of Groundsure GeoInsight Report GS-3982431, publically available BGS borehole data and examination of historic reports made available to AECOM. Table 1 details existing ground investigations which have taken place on the site.

Table 1 . Previous Ground Investigations Reports

Contractor/ Consultant	Investigation Description	Date
Soil Mechanics	Interpretive Report on Ground Investigation 6 cable percussion boreholes (BH1 to 6) to a maximum depth of 25 m and 10 trial pits (TP1-3, CBR2, 3, 5, 7,9,10 &13) to a maximum depth of 2 m	2006
ABB	Surrender of Waste Management Licence 13 trial pits (TP4-16) and drilling of 3 boreholes (done by Soil Mechanics; BH3-BH5). Groundwater sampling was also taken from existing monitoring wells (BH7 & BH8) installed in 1991.	2006

Table 2 summarises the anticipated geological conditions underlying the site based on the data reviewed.

Table 2. Summary of Geological Sequence

Strata	Depth (m OD)	Thickness (m)	Comment	Source
Made Ground		Unknown	"*Soft to firm brown slightly sandy slightly gravelly clay with bands of soft black slightly sandy slightly gravelly clay. Gravel is subangular to subrounded fine to medium of various lithologies including chalk and pottery.*"	Ground Investigation by Soil Mechanics, 2006
Glacial Deposits		16-26	*"slightly sandy, slightly gravelly clay. The sand and gravel component comprises subangular to subrounded chalk, occasionally sandstone and shell fragments."*	Ground Investigation by Soil Mechanics, 2006
Burnham Chalk		Unknown	*"White, thinly-bedded chalk with common tabular and discontinuous flint bands; sporadic marl seams"*	BGS Lexicon

2.3 Hydrogeology and Hydrology

A review of Ordnance Survey maps indicated that the site is located approximately 1.3km south west of the River Humber, which flows north west to south east. Drains run along the southern and western site boundaries, and a small water storage pond is located approximately 80m west of the site. The Humber River is a designated Ramsar site, meaning that extra precautions are needed to safeguard hydrological features.

The site is located within an area whereby the Environment Agency issue flood warnings, and flood risk zone 3, meaning there is a high (greater than 1 in 100) annual probability of flooding. Flood defences are located along the banks of the River Humber and the area falls under the jurisdiction of North East Lindsey Internal Drainage Board.

Inspection of the Environment Agency Groundwater Vulnerability Maps indicates that:

- The superficial glacial deposits are classified as a 'Secondary Aquifer (undifferentiated)', defined either as 'permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers', or 'lower permeability layers which may store and yield limited amounts of groundwater due to localised features such as fissures, thin permeable horizons and weathering'.

- The bedrock, Burnham Chalk Formation, is classified as a Principal Aquifer, defined as 'highly permeable formations usually with a known or probable presence of significant fracturing. They may be highly productive and able to support large abstractions for public supply and other purposes.

2.4 Regulatory Database Review

A Groundsure EnviroInsight Report was commissioned to evaluate any regulatory activities in the surrounding area which may have the potential to adversely affect the site. An initial Unexploded Ordinance report was also commissioned. The results of these searches are summarised below in Table 3 a plan showing the location can be found in the Groundsure EnviroInsight Report 3982431.

Table 3. Summary of Regulatory Database Search

CATEGORY	SUMMARY OF INFORMATION (<500m)
Part A(1) and IPPC Authorised Activities	1 effective: 270m south east; and 8 superseded: 270m south east all relating to Immingham CHP
List 1 Dangerous Substances Inventory Sites	1 inactive: 470m south east for Mercury and Cadmium relating to the Phillips 66 Humber Refinery site;
List 2 Dangerous Substance Inventory Sites	1 active: 470m south east for arsenic, chromium, copper, lead, nickel and zinc relating to the Phillips 66 Humber Refinery site;
Licensed Discharge Consents	3 revoked: one 51m south (relating to the Lindsey oil refinery oil interceptor) and two other unspecified trade discharges 470m south; and 1 effective: 50m north east; relating to sewage discharge from Lindsey oil refinery.
Planning Hazardous Substance Consents and Enforcements	1 approved active consents: 130m south relating to VPI Immingham – Consent to store 3050 tonnes of petroleum gas oil.
Dangerous or Hazardous Sites	1 on site current COMAH site (lower tier) relating to VPI Immingham CHP 2 off site current COMAH sites (both upper tier) relating to the Total Lindsey Oil Refinery (100m north east) and Phillips 66 Humber refinery (370m south) 1 off site historic NIHHS site (430m south relating to Conoco Manufacturing Ltd) 1 off site historic COMAH site relating to Humber LPG terminal Ltd (450 m east)
EA Recorded Pollution Incidents List 2	2 recorded: 140m south east – minor impact to air (atmospheric pollutants and effects) 400m south – minor impact to land & air (Oils and Fuels).
EA Recorded Pollution Incidents List 1	1 recorded 400m south of site relating to major persistent and extensive impacts to water (East Halton Beck).
Environment Agency/Natural Resources Wales historic landfill sites	1 on-site historic landfill licence relating to liquid sludge from the Lindsey Oil Refinery.
Environment Agency/Natural Resources Wales licensed waste sites	1 surrendered license 40m north west of the site relating to a biological treatment facility operated by the Lindsey Oil Refinery

CATEGORY	SUMMARY OF INFORMATION (<500m)
Preliminary Unexploded Ordnance Risk Assessment (UXO) by Zetica	Indicative British/Allied UXO Risk: **Negligible** Indicative German UXO Risk: **Low**

No other database entries were identified within 500m of the site boundary. Database listings reviewed included: Historic IPC Authorisations, Red List Discharge Consent Register Part A(2) and Part B Activities and Enforcements, Category 3 or 4 Radioactive Substances Authorisations, Water Industry Referrals, Sites Determined as Contaminated land (Part 2a) or Petrol & fuel sites.

2.5 Sensitive Land Uses

A Groundsure EnviroInsight Report was commissioned to evaluate the presence of environmentally sensitive sites or land uses in the surrounding area which may be affected by activity at the site. In addition, online resources such as the Natural England MAGIC database were also consulted. The results of these searches are summarised below in Table 4.

Table 4. Summary of Sensitive Land Uses (<2000m)

Land use/Site/Designation	Name	Distance
Sites of Special Scientific Interest (SSSI)	Humber Estuary N. Killingholme Haven Pits	1313m NE 1917m N
National Nature Reserves (NNR)	None	N/A
Special Areas of Conservation (SAC)	Humber Estuary	1313m NE
Ramsar Sites	Humber Estuary	1313m NE
Ancient Woodland	None	N/A
Local Nature Reserves (LNR)	None	N/A
World Heritage Site	None	N/A
Areas of Outstanding Natural Beauty (AONB)	None	N/A
National Parks (NP)	None	N/A

Source: Groundsure EnviroInsight Report No. GS-3982430

Rosper Road Pool approximately 600m south east of this site is labelled as a Local Nature reserve on Current Ordnance Survey Mapping although a check on the DEFRA website indicates it is not officially recognised as a Local Nature Reserve.

2.6 Statutory Consultations

No statutory consultations were required in order to undertake the ground investigation. Further consultations may be required before the construction phase.

3. Preliminary Conceptual Site Model

As part of the AECOM report *"VPI Immingham Phase I Geo-environmental Assessment"*, a conceptual site model was developed to identify potential source- pathways- receptor linkages that may exist on the site. These linkages informed the conceptual site model and in turn informed the design of the ground investigation. The conceptual site model from the *"VPI Immingham Phase I Geo-environmental Assessment"* is presented here

3.1 Assessment Framework

The site, in terms of potential land contamination, will be regulated by the local authority (North Lincolnshire County Council) under the Town and Country Planning Act 1990 (as amended), taking account of the National Planning Policy Framework 2012, with the Environment Agency, Natural England and English Heritage acting as statutory consultees.

The 'suitable for use' approach is adopted for the assessment of contaminated land where remedial measures are only undertaken where unacceptable risks to human health or the environment are realised taking into account the use (or proposed use) of the land in question and the environmental setting.

Additional environmental liabilities can arise through provisions contained within statutory legislation including Part 2A of the EPA 1990, the Water Resources Act 1991, the Groundwater Regulations 2009 and the Water Act 2003.

Current best practice recommends that the determination of health hazards due to contaminated land is based on the principle of risk assessment, as outlined in the Statutory Guidance to Part 2A (2012) and CLR11.

The risk assessment process for environmental contaminants is based on a source-pathway-receptor analysis. These terms can be defined as follows:

- Source: hazardous substance that has the potential to cause adverse impacts;
- Pathway: route whereby a hazardous substance may come into contact with the receptor: examples include ingestion of contaminated soil and leaching of contaminants from soil into watercourses; and
- Receptor: target that may be affected by contamination: examples include human occupants / users of site, water resources (surface waters or groundwater), or structures.

For a risk to be present there must be a relevant pollutant linkage; i.e. a mechanism whereby a source impacts on a sensitive receptor via a pathway resulting in potentially significant harm.

3.2 Potential Sources of Contamination

Based upon the available information, potential sources of contamination include:

3.2.1 On Site

- Made ground/hard standing present in the car park;
- Stockpiles and mounds (unknown material);
- Historic landfill/liquid Sludge Disposal Area.

3.2.2 Offsite

- Lindsey Crude Oil Refinery (operations and spills/leaks);
- Phillips 66 Humber Refinery;
- Historic Landfills;
- Sand/Clay pits;

- Railway line and railway sidings;
- Crushed demolition material;
- Surrounding agricultural land use

3.3 Contaminants of Concern

Identified potential sources of contamination are summarised in **Table 5**, below.

Table 5 – Summary of Contaminants of Concern

	Source	Contaminants of Concern
Onsite land use	Stockpiles/mounds/made ground	• Stockpiles/mounds are of unknown material, however are likely to include: • Metals e.g. Arsenic, zinc, lead, copper, manganese • Organics e.g. petroleum hydrocarbons
	Historic Landfill	• Metals e.g. Arsenic, Zinc, Lead, Copper, Manganese and Cadmium; • Inorganic Compounds e.g. sulphates, sulphides, cyanides and chlorides;
Offsite land use	Railway line and former railway sidings	• Metals e.g. Arsenic, Zinc, Lead, Copper, Manganese and Cadmium; • Inorganic Compounds e.g. sulphates, sulphides, cyanides and chlorides; • Organic compounds e.g. mineral oils, fuel/lubricating oils, ethylene glycol, • herbicides and • asbestos.
	Sand/Clay Pits	• Metals e.g. arsenic, zinc, lead, copper, manganese and cadmium; • Organics e.g. polyaromatic hydrocarbons (PAHs), total petroleum hydrocarbons (TPHs); • Gases e.g. methane, carbon dioxide, carbon monoxide and hydrogen sulphide.
	Oil refinery operations and VPI power plant operations	• Hydrocarbons e.g. crude oil, motor oils, petrol, diesel, kerosene, lubricants, waxes, bitumen, aviation fuel • Other organics e.g. alcohols, PCBs, MTBE, TAME, solvents, aliphatic and aromatic compounds; • Inorganic compounds e.g. acids, alkalis, cyanides, Sulphur and sulphide; • Metals e.g. aluminium, cobalt, copper, iron, lead, molybdenum, nickel and vanadium; • Others e.g. asbestos
	Crushed demolition material	• Metals e.g. cadmium, mercury, lead and nickel; • Hydrocarbons e.g. polyaromatics, asphaltenes and saturates; • Others e.g. asbestos
	Current VPI Immingham CHP operations, including spills/leaks	• Metals, metalloids and their compounds e.g. aluminium, barium, cobalt and iron; • Polyaromatic hydrocarbons e.g. naphthalene, anthracene and phenanthrene • Other organic compounds e.g. fuel oil, degreasing solvent and PCB's; • Inorganic compounds e.g. ammonium salts, boron and hydrazine; • Acids and alkalis • Others e.g. asbestos
		•

3.4 Potential Pathways

Based upon the available information, the following are considered potential pathways:

3.4.1 Human Health:

- Direct dermal contact with substances in shallow soil and/or groundwater during potential groundworks;
- Inhalation of substances from the partitioning of vapours from soil and / or shallow groundwater; and,
- Accidental ingestion and/or inhalation of substances in soil/dust and/or shallow groundwater during potential groundworks;

3.4.2 Controlled Waters:

- Vertical migration through unsurfaced areas, vegetated areas and hard-standing (where there are joins / cracks) and drains/pipework into the Made Ground/shallow soil;
- Lateral and vertical migration within the made ground and superficial deposits (Secondary A Aquifer), e.g. leaching from made ground vertically into shallow soil layers, including into deeper groundwater;
- Preferential lateral and vertical migration along routes of underground services, pipelines and associated trenches;
- Lateral overland flow, including via drains, to nearby surface waters;
- Preferential lateral and vertical migration along routes of underground services, pipelines and associated trench;
- Lateral and vertical migration within deeper groundwater in the Chalk bedrock (Principal Aquifer);
- Lateral migration of groundwater into surface water courses and abstraction points;
- Direct contact of substances within shallow groundwater Migration of ground gases and accumulation in confined spaces (e.g. basements, service ducts); and,
- Direct contact with nearby buildings, including Total Lindsey Oil Refinery and Phillips 66.

3.4.3 Ecology:

- Plant uptake and subsequent ingestion by fauna.

3.5 Potential receptors

3.5.1 Human Health:

- On site construction workers;
- Off-site workers e.g. Lindsey Oil refinery; and,
- Nearby residents.

3.5.2 Controlled Waters:

- Surface waters including the River Humber (RAMSAR site) and nearby drains e.g.
- Abstraction points;
- Shallow groundwater within the superficial deposits (Secondary A Aquifer); and,
- Deep groundwater within the chalk bedrock (Principal Aquifer);

3.5.3 Infrastructure:

- Underground services e.g. buried pipes; and,

- Confined spaces within buildings e.g. basements, service ducts;

3.5.4 Ecology:

- Flora and Fauna.

3.6 Preliminary Risk Evaluation

A summary of the risk assessment principles used to evaluate potential pollutant linkages is presented as Appendix B.

3.7 Summary of Potential Pollutant Linkages

A summary of the potential pollutant linkages and the related initial qualitative assessment of risk is summarised in Table 6, below. The risk rankings assume that the current ground and groundwater conditions prevail, prior to any mitigation measures such as further intrusive investigation, quantitative risk assessment or remediation. The risk rankings for each of the pollutant linkages are derived from a combination of:

- The magnitude of the potential consequence (i.e. severity) of the exposure of the receptor to the contaminant; and
- The magnitude of probability (i.e. likelihood) that the pollutant linkage is present or will occur.

Table 6 – Summary of Pollutant Linkages

Source	Pathway	Receptor	Potential severity as defined in Appendix B	Likelihood of Occurrence as defined in Appendix B	Level of Risk as defined in Appendix B	Discussion
On site e.g. Made Ground, Hard Ground and Historic Landfill	Direct dermal contact/ingestion/inhalation;	On-site construction workers	Medium	Likely	Moderate	It is likely that future site workers will come into contact with mound/stockpile material, the contents of which are unknown, therefore potential risk is high. There should be appropriate safety and mitigation measures put in place to minimise risk to human health. The nearest residential receptors are located in the village of North Killingholme (1.6km west). Such residents are not anticipated to be at significant risk due to distance from site.
	Inhalation of vapours;	Off-site workers Neighbouring residents	Medium	Likely	Moderate	
	Direct run off into surface waters e.g. River Trent Humber and nearby drains	Controlled water courses e.g. River Humber and groundwater within superficial deposits (secondary A) and bedrock (secondary B).	Medium	Likely	Moderate	As indicated by the EA, there is a historic landfill located in the north western corner of the proposed development site. It is anticipated that any contamination present may have migrated both vertically and laterally into deeper groundwater and surface waters. Hard ground is present on site, indicating that contamination may enter surface waters via overland flow.
	Vertical and lateral migration in made ground/superficial deposits (Secondary A aquifer), including into deeper groundwater (Secondary B aquifer);		Medium	Likely	Moderate	
	Vertical and lateral migration of ground/surface waters along preferential pathways, including to surface waters;		Medium	Likely	Moderate	
	Direct impact to buried infrastructure;	Buried infrastructure .e.g. pipes and underground utilities	Medium	Low	Moderate/Low	The site is within close proximity to the Lindsey Oil Refinery and Phillips 66, meaning that underground services are likely to be present and may be affected during excavation works.
	Plant uptake and subsequent ingestion by fauna;	Flora and fauna	Medium	Likely	Moderate	The River Humber is a designated RAMSAR and Special Protection Area (SPA), therefore any contaminated groundwater uptake is of potential risk to both flora and fauna.
Offsite power plant and oil refinery operations, including spills and leaks	Direct dermal contact/ingestion/inhalation;	On-site construction workers Future on-site excavation and construction workers	Medium	Unlikely	Low	Risk to human health is likely to be low, as remediation procedures, as well as pollutant mitigation measures, are assumed to be enforced by the operators of nearby industry, although this is not known for certain. Therefore, the likelihood of contaminants impacting upon human receptors is low.
	Inhalation of vapours;		Medium	Unlikely	Low	
	Direct run off from on-site resources into surface waters e.g. River Humber and nearby drains;	Controlled water courses e.g. River Humber and deeper groundwater within superficial deposits (secondary A) and bedrock (secondary B);	Severe	Low	Moderate	If contaminated material migrate vertically through the made ground and into the superficial deposits, it is likely that deeper groundwater within the secondary B aquifer and surface waters will also be significantly affected. The likelihood of occurrence is however deemed to be low, as pollutant mitigation measures are assumed to be in place at nearby industrial sites. It is anticipated that groundwater abstraction wells will not be significantly affected by contamination, due to distance from site.
	Vertical and lateral migration in made ground/superficial deposits (Secondary A aquifer) beneath the site;		Severe	Low	Moderate	
	Vertical migration into bedrock (Secondary B aquifer);		Severe	Low	Moderate	
	Vertical and lateral migration of ground/surface waters along preferential pathways;		Medium	Low	Moderate/Low	
Offsite land use inc. sand/clay pits, landfill	Direct dermal contact/ingestion/inhalation;	On-site construction workers Off-site workers Neighbouring residents	Medium	Unlikely	Low	The likelihood of site workers coming into contact with offsite land use contamination is unlikely due to distance from site. It is unlikely that vapours relating to offsite sources will impact human health, assuming correct PPE is worn and safety measures are followed.
	Inhalation of vapours;		Medium	Low	Moderate/Low	
	Direct run off from Off-site resources into surface waters e.g. River Humber and nearby drains;	Controlled water courses e.g. River Humber and groundwater within superficial deposits (secondary A) and bedrock (secondary B)	Medium	Likely	Moderate	Much of the site is covered with hard ground, meaning that any contamination present on site is likely to enter nearby surface waters via overland flow. It is also likely that if exposed during works, contamination may migrate via shallow soils into groundwater and subsequently enter surface waters via lateral migration. .
	Vertical and lateral migration in made ground/superficial deposits (Secondary A aquifer), including into deeper groundwater (Secondary B aquifer) beneath the site;		Medium	Likely	Moderate	
	Vertical and lateral migration of ground/surface waters along preferential pathways;		Medium	Likely	Moderate	
	Direct impact to buried infrastructure onsite;	Buried infrastructure .e.g. pipes and utilities	Medium	Low	Moderate/Low	Contaminants which enter the site from offsite land use impact upon infrastructure if exposed during works.

4. Fieldwork

4.1 Ground investigations

4.1.1 Description of field work

A summary of the exploratory holes were proposed by AECOM and advanced by engineers from Socotec during the site works can be found in Table 7 below;

Table 7. Summary of Exploratory Locations

Type	Quantity	Depth Range (m)	Remarks
Cable Percussion Boring	3	22.34 to 28.66	BH1, BH2 and BH5
Cable Percussion Boring extended by Rotary Core Drilling/Open Hole Drilling	3	28.60 to 34.60	BH3, BH4 and BH6
Dynamic Sampling	8	3.75 to 5.45	WS01 to WS08
Trial Pits/Trenches	13	2.50 to 4.60	TT1 to TT3 and TP1 to TP10

Source: Socotec Factual Report No A805-18, contained in Appendix C

The exploratory hole logs are presented in the Socotec Factual report (Appendix C). Samples taken for geotechnical purposes were collected and transported to Socotec's laboratory in Doncaster for analysis. Samples for environmental testing were collected and transported to Exova Environmental Laboratories, Deeside, for analysis. The laboratory certificates are presented in Appendix D.

4.1.2 In situ testing

Standard penetration tests (SPT) in the boreholes were carried out in accordance with BS EN ISO 22476-3+A1 (2011) and the SPT hammer energy ratio certificate is included in the Socotec Factual report Appendix C.

4.1.3 Laboratory testing

Soil testing was undertaken on samples recovered from the boreholes. The testing regime was prescribed by AECOM, and the testing was performed by Socotec Ltd and Exova Jones Ltd. All geotechnical testing was UKAS accredited and completed in accordance with current relevant standards, as set out in the Factual Report located in Appendix C. The following geotechnical laboratory tests were undertaken;

- Classification tests, including moisture content, Atterberg limits (INDEX) and particle size distribution (PSD).
- Consolidated (CU) and Unconsolidated (UU) undrained triaxial tests.
- Recompacted California Bearing Ratio (CBR) tests
- Consolidation tests (OED)
- Hydraulic Cell (HC) tests
- Soil chemical testing suite, including pH and sulphate.

Selected soil and groundwater samples were also analysed for a range of chemicals including:

- Volatile Organic Compounds (VOCs).
- Semi Volatile Organic Compounds Including USEPA PAHs (SVOCs).
- Total Petroleum Hydrocarbons- Criteria Working Group (TPH-CWG).
- Heavy Metals;
- pH,

- soil organic matter (soils only),
- asbestos,
- ammoniacal nitrogen, chloride, fluoride, nitrate, sulphide and total sulphate. .

All geochemical tests were where available UKAS and MCERTs accredited. Copies of the tests result and laboratory certificates are presented in Appendix D.

4.2 Ground Investigation Factual Report

The results of the 2018 ground investigation, including exploratory hole logs and geotechnical laboratory testing results, are presented in Socotec's ground investigation factual report entitled "*VPI Immingham Factual Report On Ground Investigation Report No A8015-18*", dated July 2018. A copy of the report can be found in Appendix C.

4.3 Post Ground Investigation

Three rounds of post site work gas and ground water monitoring was undertake by AECOM between 11/05/18 and 7/05/18 the result of which can be found in Appendix E

Fourteen dual-purpose gas / groundwater monitoring wells were installed and subjected to 3 rounds of in-situ monitoring which were undertaken on 11th May 2018, 23rd May 2018 and 1st June 2018. Depth to water was recorded at each location on each visit, while Temperature (°C), Specific Conductivity (µS/cm), Dissolved Oxygen concentration (mg/L) and Oxidation-Reduction Potential (ORP) (mV) were recorded at all wells containing groundwater on the first visit when the single round of groundwater sampling was undertake. Gas flow rates and Oxygen, Carbon dioxide and Methane concentrations were recorded at each location on each monitoring visit. The results of this monitoring is presented in Appendix E

5. Ground Summary

5.1 Summary of Ground Conditions

Published information on geology, including geological maps, is summarised in detail in the VPI Immingham Phase I Geo-environmental Assessment and summarised in Section 2.2 of this report.

The ground conditions in the vicinity of the site comprise:

- Topsoil, overlying;
- Made Ground;
- Superficial deposits (Glacial Till and Glacial Sand and Gravel);
- Chalk of the Burnham Chalk Formation of the Upper Cretaceous period.

The following information is intended to summarise the results of the 2018 ground investigation by SOCOTEC UK Limited and refine the preliminary understanding of the likely ground conditions.

An outline ground model for the site is summarised in Table 8 and discussed in more detail in Sections 5.1.1 to 5.1.3.

Table 8. Outline Ground Model of the Site.

Material	Typical Description	Top of Strata, m bgl	Base of Strata, m bgl	Top of Strata, m OD	Base of Strata, m OD
Made Ground	Sandy gravelly clay	0.0	0.2 to 1.7	6.5 to 4.0	6.3 to 3.2
Glacial Till	Firm to stiff sandy gravelly clay	0.0 to 1.7	21.5 to 27.5	6.0 to 3.5	-16.8 to -21.5
Glacial Sands and Gravels [1]	Medium dense clayey sand and gravel	12.9 to 13.0	15.2 to 16.0	-6.6 to -8.2	-9.3 to - 10.6
Weathered Chalk	Extremely weak to very weak chalk	21.5 to 27.5	26.1 to 30.9	-17.0 to -21.5	-22.5 to -26.6
Unweathered Chalk	Medium Strong to strong chalk	26.1 to 30.9	Unproven	-22.5 to -26.5	Unproven

Note: 1) Glacial Sands and Gravels encountered in three of the six boreholes.

5.1.1 Made Ground

Made Ground is found in most of the exploratory boreholes over a range of depths (approximately 0.2m to 1.7m bgl) across the site. Made Ground is predominately described as a mix of slightly sandy, slightly gravelly, clay and sandy, clayey, gravel in a few boreholes. It contains a mixture of angular to sub-angular gravel of chalk, flint and sandstone. Cobbles are described as subrounded to subangular of concrete and chalk. The layers of different materials suggest both re-worked natural material and placed fill which follow no discernible pattern and so will collectively be assigned as Made Ground.

5.1.2 Superficial Deposits – Glacial Till and Glacial Sands and Gravels

Superficial materials are found to be Glacial Deposits, comprising Glacial Till and Glacial Sands and Gravels. Glacial Till is found consistently in all of the boreholes with approximately 17.0m to 21.0m thickness. It has been described mainly as firm, becoming stiff to very stiff below 0.0m OD, brown, mottled grey, slightly sandy, slightly gravelly, clay. There is a clear trend that shows the material stiffness increasing with depth. Layers of Glacial

Sands and Gravels were encountered in a number of boreholes. The material is described as medium dense, brown, slightly sandy, slightly clayey sand and slightly gravelly, slightly clayey, gravel. A layer up to approximately 1.0m thick was encountered in around 60% of the exploratory holes, between 2.0m and 0.0 m OD. A further layer of several metres thickness, varying from 2.3m to 2.7m thick was recorded in several boreholes at between -6.5m and -10.5m OD. However it was absent in boreholes BH2, BH4 and BH5, being replaced by a clay till deposit. The sand and gravel layers at the site may be lenticular deposits and therefore cannot be guaranteed and the appropriateness of their use in design should be carefully considered.

5.1.3 Bedrock – Burnham Chalk Formation

The boreholes show the bedrock to be chalk of the Burnham Chalk Formation. This confirms what can be seen in the BGS maps of the site. The top the weathered bedrock is found approximately at -17.0m to -21.5m OD. The upper levels of the chalk are frequently described as extremely weak to very weak with clusters of sub-horizontal and sub-vertical fractures. Chalk was mostly recovered as sandy, gravelly, clay. This indicates the upper part of the chalk is highly weathered.

Less weathered chalk was recorded between the depths of -22.5m and -26.5m OD and described as weak to medium strong, cream/white chalk.

6. Geotechnical Parameters

The following assessments and summaries are based on the recent ground investigation data provided by SOCOTEC UK Limited in 2018. Parameters have been derived using a combination of in-situ test results from the Ground Investigation, geotechnical laboratory testing and in the absence of any other data, established engineering correlations.

The 'Typical Derived Values' presented in the tables below are intended to serve as a reference point for establishing characteristic values, which are defined as 'cautious estimate(s) of the value(s) affecting the occurrence of the limit state' (Section 2.4.5.2 (2), BS EN 1997-1:2004). As such, the tabulated derived values are provided as cautious estimates of a parameter, but would need to be reviewed and adjusted according for the limit state being assessed.

Charts summarising the GI results are presented in Appendix F.

6.1 Made Ground

Made Ground material recovered and tested during the recent GI has been classified as either Cohesive Made Ground (predominately soft clay) or Granular Made Ground (predominately gravel). However, the layers of granular material were found less frequently and show no specific pattern so both types of material will collectively be defined as Made Ground. Table 9 presents indicative geotechnical parameters for the Made Ground material. The effective strength parameters defined for the Made Ground can be further assessed, if necessary, on a location specific basis using the GI data.

Table 9. – Typical Material Parameters – Made Ground

Parameter	Type and No. of Tests	Range Encountered	Typical Derived Value	Remarks
Unit Weight (kN/m^3)	CBR (3)	18.8 - 19.8 (mean 19.33)	19	Derived value based on data obtained as part of recompacted CBR testing and typical published values for materials identified (BS8002:2015, Bond 2014 and Barnes 2000).
Moisture Content (%)	INDX (5)	20 - 27 (mean 22.6)	-	Data obtained primarily from Atterberg limit tests.
Liquid Limit (%)	INDX (5)	44 - 54 (mean 47.2)	-	Data obtained from Atterberg limit tests.
Plasticity Index (%)	INDX (5)	21 - 29 (mean 25.2)	28	Cautious estimate of derived value based on data obtained from Atterberg limit tests.
c_u (kPa)	HV (20)	70 - 120 (mean 110.5)	30	Cautious estimate based on borehole descriptions and guidance in BS5390:2015. Hand Shear Vane tests tend to over-estimate C_u values and have therefore only been used as an approximate guide.
E_s (MPa)	HV (20) (correlated from HV)	6MPa to 15MPa	6	E_s = (200 to 500) x C_u (Bowles. 1997).
c' (kPa)	-	0	0	No direct test data available. Cautious estimate of derived value recommended.
Phi' (degrees)	INDX (5) (correlated)	24 - 26	25 (critical state)	Cautious estimate of critical state derived value based on correlations relating critical state angle of friction and plasticity index (assuming a mean PI value of 25) from Table 2 of BS 8002:2015. Location-specific interpretation to be undertaken for design due to variable composition.

6.2 Glacial Till

Glacial Till was the predominant material found in the boreholes with sporadic and of variable thickness layers of Glacial Sands and Gravels. The Glacial Sands and Gravels layers were identified in around half of the exploratory holes, at levels between 2.0m to 0.0 m OD and -6.5m to -10.5m OD, approximately. As a conservative assumption, it is not recommended that these layers should be modelled separately. Further assessment can be done on a location specific basis if it is later considered necessary and beneficial to assign engineering parameters to the Glacial Sand and Gravel layers.

The Glacial Till was found typically as clay with secondary constituents in varying proportions of sand and gravel. The colour is mostly brown with grey mottling. The stiffness and strength of the material increases with depth. Indicative geotechnical parameters are shown in Table 10.

Table 10 Typical Material Parameters – Glacial Till

Parameter	Type and No. of Tests	Range Encountered/ Derived	Typical Derived Value	Remarks
Unit Weight (kN/m^3)	CBR (7) + UU(14) + CU(6) + OED (8) + HC (2)	19 – 23.5 (mean 20.9)	20	Derived value based on data obtained as part of recompacted CBR testing and typical published values for materials identified (BS8002:2015, Bond 2014 and Barnes 2000).
Moisture Content (%)	INDX (71) + UU(14) + CU(6) + OED(8) + HC(2) + CBR(20)	4.9 - 28 (mean 18.9)	-	Data obtained primarily from Atterberg limit tests.
Liquid Limit (%)	INDX (34)	23 - 50 (mean 36.8)	-	Data obtained from Atterberg limit tests.
Plasticity Index (%)	INDX (34)	9 - 28 (mean 19.4)	Above 0.0m OD = 25 Below 0.0m OD = 18	Cautious estimate of derived value based on data obtained from Atterberg limit tests. Refer to Appendix F Figure A.7.
SPT-N	SPT (143)	4 - 57 (mean 28.13)	Above 0.0m OD = 13.5 Below 0.0m OD = 13.5 + 1.75L	Where L is depth below 0.0m OD.
C_v	CU (6) + OED(8)	0.61 to 5.6 (mean 2.1)	2.1	Typical values from OED + CU tests at δ_{vo} + 150kPa pressure. C_v of 17 in BH1 omitted from calculations.
M_v	CU (6) + OED(8)	0.02 to 0.67 (mean 0.22)	0.1	Range of values from CU + OED tests at δ_{vo} + 150kPa pressure. Results from OED tests are considered to give a more accurate representation of M_v values than CU tests, therefore more weight has been given to the OED results when creating typical values. Results indicate that the material has a very low to medium compressibility index (Tomlinson 2001)
c_u (kPa)	SPT (143) + HV(23)	20 - 285 (mean 137.2)	Above 0.0m OD = 50 Below 0.0m OD = 50 + 9.5L	Cautious estimate of derived value based on a correlation of c_u = 4 x SPT-N (Stroud, 1974). Where L is depth below 0.0m OD. Hand Shear Vane tests tend to over-estimate C_u values and have therefore only been used as an approximate guide.

Parameter	Type and No. of Tests	Range Encountered/ Derived	Typical Derived Value	Remarks
E_s (MPa)	SPT (143) (correlated)	3.6 - 45 (mean 36.8)	Above 0.0m OD = 12 Below 0.0m OD = 12 + 1.5L	Cautious estimate of derived value based on E_s/N = 0.9 MPa for cohesive soils.
c' (kPa)	CU(6)	2.2 – 15.9	2	Cautious assumed values taken from CU tests.
Phi' (degrees)	CU(6)	27 to 31	Above 0.0m OD = 27 Below 0.0m OD = 29	Cautious assumed values taken from CU tests

6.3 Burnham Chalk Formation

The chalk formation encountered in the boreholes is mostly described as extremely weak to weak with closely spaced fractures (recovered as gravelly clay) overlying medium to medium strong layer of chalk. The colour is identified as white and/or cream with occasional grey or black staining.

Table 11 presents a published range of values for chalk in the literature (CIRIA 574, CIRIA Project Reports 11 and 86). As part of the 2018 GI, six (6.No) SPT tests were undertaken within the Burnham Chalk Formation, one of these is located within the unweathered material. Without geotechnical laboratory testing information available for the chalk formation, it is not possible to provide typical derived values. Should the proposed foundations terminate within, or close to, the Burnham Chalk Formation, further geotechnical information will be required at the geotechnical design stage.

Table 11 Typical Material Parameters – Chalk

Parameter	Range Encountered/ Derived	Typical Derived Value (weathered chalk)	Typical Derived Value (unweathered chalk)	Remarks
Unit Weight (kN/m^3)	13 - 24	19(1)	20 (2)	No laboratory testing information available from ground investigation. (1) Correlates to a low to medium density, weak chalk (Table 3.7 Lord et al 2002) (2) Correlates to a high density moderately weak chalk.
Moisture Content (%)	4 – 40	Unknown	Unknown	No laboratory testing information available from ground investigation. Typical Range of values taken from CIRIA Guide C574.
Liquid Limit (%)	18 – 53	Unknown	Unknown	
Plasticity Index (%)	4 – 30	Unknown	Unknown	
SPT (N)	44 – 50 (6.No SPT)	50	50	
Point load Index (MPa)	0.01 – 1.15	Unknown	Unknown	
q_u (MPa)	0.7 – 40	Unknown	Unknown	
E_s (GPa)	1 – 30	Unknown	Unknown	
c' (kPa)	0 – 320	Unknown	Unknown	
Phi' (degrees) (Peak)	29 - 42	Unknown	Unknown	
UCS (MPa)	0.7 – 40	Unknown	Unknown	

6.4 Groundwater Strikes

Groundwater strikes encountered during the investigation of 2018 are summarised in Table 12 and were recorded at a range of depths (1.0m to 28.6m bgl) throughout the site. All of the strikes were found in the Glacial Till deposits with the exception of TP9, which was recorded in Made Ground at 0.7m bgl. Refer to Table 10 and Appendix C for summary of all groundwater strikes. It is considered likely that multiple water tables are contained within the Glacial Deposits.

Table 12 Recorded Groundwater Levels (04.2018)

Borehole No.	Borehole Ground Level (m OD)	Groundwater Strike Depth (m bgl)	Groundwater level after 20 mins (m bgl)	Geology
BH1	6.36	3.8	2.3	Glacial Till
		8.5	6.3	Glacial Till
		13.5	9	Glacial Sands and Gravels
		21	19.7	Glacial Till
BH2	5.43	1.8	1.5	Glacial Till
		4.2	1.7	Glacial Till
		14.1	10	Glacial Till
BH3	5.43	3	1.2	Glacial Till
		7.1	4.2	Glacial Till
		13.3	6.1	Glacial Sands and Gravels
		26.8	8.7	Chalk
BH4	4.19	3.2	1	Glacial Till
		7.4	2.1	Glacial Till
		12	7	Glacial Till
		13.4	4.2	Glacial Till
		17.8	15.1	Glacial Till
		24	9.6	Glacial Till
BH5	4.65	12.4	12.1	Glacial Till
		17.6	16.7	Glacial Till
BH6	4.71	4.65	2.5	Glacial Till

		11.7	3.1	Glacial Till
		18.6	16.6	Glacial Till
		21.5	16.1	Chalk
WS1	6.49	4.2	-	Glacial Sands and Gravels
WS4	5.1	3	-	Glacial Sands and Gravels
WS6	5.69	4	-	Glacial Sands and Gravels
WS7	5.79	5	-	Glacial Sands and Gravels
TP5	4.31	1.2	-	Glacial Till
TP6	5.43	1.9	-	Glacial Till
TP7	5.29	1.1	-	Glacial Till
TP9	5.71	0.7	-	Granular Made Ground
TP10	4.7	1	-	Glacial Till
TT1	6.44	1.5	-	Glacial Till

Groundwater strikes were recorded at a range of depths (1m to 28.6m bgl) throughout the site during the ground investigation. The majority of the strikes were found in the Glacial Till with a few strikes recorded in the Glacial Sands and Gravels and Chalk. In many cases, the groundwater is under sub-artesian pressures and semi-confined by less permeable clay layers. Upon release of these pressures, the recorded water strike level rises quite rapidly. Refer to Table 10 and Appendix C for summary of all groundwater strikes.

6.5 Groundwater monitoring

Following the 2018 GI, 3 rounds of ground water monitoring were undertaken by AECOM, a summary of these results can be found in Table 13 below.

Table 13 Groundwater Monitoring Results Summary (04.2018)

Hole ID	GL m OD	Range of groundwater levels m bgl	Range of ground water levels m OD	Response zone (m bgl)	Strata
BH01	6.36	3.70 -3.97	2.39 - 2.65	12.50-15.00	Glacial Deposits
BH02	5.43	2.66 - 2.87	2.56 - 2.77	14.00-15.30	Glacial Deposits
BH03	5.43	2.57 - 2.75	2.68 - 2.86	26.60-28.60	Burnham Chalk
BH04	4.19	1.31 - 1.56	2.63 - 2.88	28.60-34.60	Burnham Chalk
BH05	4.65	1.86 - 2.04	2.61 - 2.78	17.50-18.50	Glacial Deposits
BH06	4.71	2.19 - 2.33	2.38 - 2.51	25.50-34.50	Burnham Chalk
WS01	6.49	2.08 - 2.16	4.33 - 4.40	1.00-1.40	Made Ground

WS02	5.46	1.32 - 1.36	4.09 - 4.14	0.70-1.20	Made Ground
WS03	5.52	1.40 - 1.52	3.99 - 4.12	2.50-3.50	Glacial Deposits
WS04	5.1	0.96 - 0.99	4.11 - 4.13	1.30-2.30	Made Ground/Glacial Deposits
WS05	4.7	0.98 - 1.00	3.67 - 3.72	3.20-4.20	Glacial Deposits
WS06	5.69	1.59 - 1.64	4.05 - 4.10	3.10-3.70	Glacial Deposits
WS07	5.79	1.83 - 1.86	3.92 - 3.95	3.00-3.50	Glacial Deposits
WS08	4.53	3.33 - 3.86	0.67 - 1.19	3.60-4.10	Glacial Deposits

As shown in Table 13, the monitored groundwater levels range from 4.33m OD to 0.67m OD. Many of the recorded levels are shown above the selected response zones. This can indicate the groundwater in the more porous strata is under sub-artesian pressures and is confined by overlying less permeable strata, as theorised in Section 6.4.

6.6 Concrete Aggressivity

The concrete aggressivity testing was undertaken only on samples from superficial layers (6.No samples from Glacial Deposits and 5.No samples in Made Ground). Based on the limited data available, the following Design Sulphate and ACEC design classes for concrete in aggressive ground are classified in Table 14. The below results are based on brownfield conditions and are in accordance with the BRE Special Digest 1 (Concrete in Aggressive Ground). Three of the four samples taken within the Glacial Till show high value of oxdisable sulphides (>0.3%), this could suggest pyritic ground. Based on this, the classification results shown in Table 14 for the disturbed ground, assume that pyrite is present.

Table 14 Summary of Preliminary Concrete Aggressivity Classification

Stratum	Classification (undisturbed ground, eg. for buried piles)	Classification (disturbed ground, eg. for pile cap)
Made Ground	DS-2, AC-2	DS-2, AC-2
Glacial Deposits	DS-1, AC-1	DS-3, AC-3

Sulfate classes (DS) and aggressivity to concrete classes (AC) range from DS-1/AC-1 to DS-5/AC-5, with higher value classes being assigned to the more adverse ground conditions.

7. Contamination Assessment

7.1 Sample Analysis

Environmental sampling was conducted on a total of 26 soil samples and 7 groundwater samples taken during the Ground Investigation works. The full results of this testing can be found in the Ground Investigation Factual Report presented in Appendix G, but a summary of the soil and groundwater testing scheduled following the ground investigation is summarised in Tables 15 and 16.

Table 15. Summary of Geo-Environmental Soil Testing

Suite	Test Determinants	No. of Tests	Locations
CLEA Metals	As, Ba, Be, Cd, Cr, Cu, Hg, Ni, Pb, Se, V, Zn, Cr VI, Cr III	26	BH01-BH06, WS01-06, TP01-TP02, TP04-TP10, TT01-TT03

Inorganics	pH, Ammoniacal Nitrogen as N, Total Alkalinity as CaCO3, Chloride, Nitrate as N, Ortho-Phosphate as P, Sulphate	7	BH01-BH03, WS03-WS06
Total Suspended Solids (TSS)		7	BH01-BH03, WS03-WS06

7.1.1 Observations of contamination

Visual and olfactory evidence of contamination was encountered at shallow depth in the made ground at 9 locations during the ground investigation. Headspace analysis for the presence of Volatile Organic Compounds (VOCs) was undertaken on samples taken from these locations and Photo Ionisation Detector (PID) readings recorded. These observations, along with the PID readings, are summarised in Table 17. These observations albeit not quantitative were used to select samples sent for laboratory analysis.

Table 17. Summary of Observations of Contamination

Location	Depth (m bgl)	Description	PID Reading (ppm)
BH01	0.45-0.7	Made Ground, oily smell, black staining, wet	3.3
BH02	0.6-1.0	Made Ground, oily smell, black staining	0.9
WS01	0.5-1.2	Made Ground, oily smell	1.3
WS02	0.0-0.5	Made Ground, oily smell, black staining	0.8
WS03	0.0-1.2	Made Ground, oily smell, black staining	0.5
WS05	0.0-1.2	Made Ground, oily smell, black staining	0.1
TP01	0.7-0.9	Made Ground, oily smell, black staining	4.4
TP02	0.3-0.5	Made Ground, oily smell, black staining	42.4
TP06	0.4-0.6	Made Ground, oily smell, black staining	0.3

7.2 Stage 2 Risk Assessment

7.2.1 Human Health Risk Assessment Methodology

This assessment has been based on a general industrial or commercial future use of the site and neighbouring sites.

The assessment considers chronic risks only and does not assess acute risks to construction / maintenance workers during intrusive works.

Where the conceptual site model identifies one or more complete pollutant linkage(s) with respect to human health it is often necessary to clarify the risk posed by that pollutant linkage by comparison of reported concentrations with guideline values that represent acceptable concentrations. This includes assessing risks to human health at a generic level (termed ‘Generic Quantitative Risk Assessment’ (GQRA) or ‘Stage 2’ in the Environment Agency’s Model Procedures for the Management of Land Contamination, Contaminated Land Report 11, 2004 (known as CLR11)).

The assessment of cumulative risk from multiple substances is not required at GQRA level, with the exception of TPH. In accordance with Environment Agency science report P5-080/TR3[2], a hazard index (HI) is calculated for each individual sample based on the summation of the hazard quotient (HQ) for each TPH fraction.

Stage 2 Generic Assessment Criteria (GAC) for soils have been calculated using the reported Total Organic Carbon (TOC) concentration of samples collected and analysed as part of the intrusive investigation.

Based on the exploratory records, the most appropriate soil type for the Made Ground and the superficial deposits was considered to be the worse-case 'SAND' scenario, as defined by the Environment Agency's standard default soil descriptions.

It should be noted that Stage 2 assessments tend to be relatively conservative and are therefore suitable for initial screening of the potential chronic long term risks to human health at a site only. Full details of the physical and chemical parameters used in the derivation of the GAC can be made available upon request.

7.2.1.1 Asbestos

A total of 25 samples collected were analysed for asbestos across the site. Six samples reported asbestos fibres (chrysotile) were present in the made ground, however the volume of asbestos detected was reported as being less than 0.1% mass by weight in each case. Further Gravimetric Quantification testing of the samples was conducted and a summary of the asbestos quantification is presented in Table 18. Laboratory certificates are presented in Appendix D.

Table 18. Results of asbestos analysis

Location	Depth (m bgl)	Asbestos type	Present as	Quantity (w/w%)
BH01	0.45-0.70	Chrysotile	Fibre bundles	<0.001%
BH02	0.6-1.0	Chrysotile	Fibre bundles	<0.001%
WS01	1.0-1.25	Chrysotile	Fibre bundles	<0.001%
TP01	0.7-0.9	Chrysotile	Fibre bundles	<0.001%
TP02	0.3-0.5	Chrysotile	Fibre bundles	<0.001%
TP06	0.4-0.6	Chrysotile	Fibre bundles	<0.001%

The presence of asbestos fibres presents a potential acute occupational health risk to any groundworks which may be undertaken on the site and should be considered by the contractor as part of any future intended works and any off-site disposal of soils.

7.2.1.2 Human Health Risk Assessment Results & Discussion

A comparison of the results of laboratory testing with the Stage 2 GAC selected for this site indicate that there are no exceedances of the chosen screening values in either soil or groundwater samples including those where visual olfactory impact was encountered . As such, no further assessment of chronic human health risks from soils are required. The full contamination assessment can be found in Appendix G.

7.2.2 Controlled Waters Risk Assessment Methodology

AECOM has a prescribed methodology for assessing risks to controlled waters at a generic level termed 'generic quantitative risk assessment' (GQRA) or 'Stage 2' in CLR11[3].

For sites in England and Wales where the conceptual site model has identified a potentially complete contaminant linkage to controlled waters, the first step is to define a suitable water target value (WTV) for the identified point of compliance upon which the risk assessment can be based. For groundwater compliance points which may support potable abstraction, the UK Drinking Water Standard (DWS) is used in England and Wales

[2] *The UK Approach for Evaluating Human Health Risks from Petroleum Hydrocarbons in Soil, Report P5-080/TR3*. Bristol: Environment Agency (2005).
[3] Environment Agency (2004) Model Procedures for the Management of Land Contamination, Contaminated Land Report 11. September 2004.

whilst for surface water compliance points or non-potable aquifer units, an Environmental Quality Standard (EQS) is adopted. EQS coastal has been adopted for this site due to the sites proximity to the Humber Estuary.

The following Controlled Waters receptors have been considered in the following assessment:

- Superficial deposits underlying the site are classified as a Secondary A Aquifer;
- The Burnham Chalk Formation limestone bedrock underlying the site is classified as a Principal Aquifer; and
- The Humber estuary.

7.2.2.1 Controlled Waters Risk Assessment Results & Discussion

A comparison of the results of laboratory testing with the Stage 2 GAC selected for this site indicate that there are a number of exceedances of the chosen screening values. These exceedances are detailed in Table 19 below; The full contamination assessment can be found Appendix G

Table 19. Exceedance of Stage 2 GAC for Controlled Waters: Groundwater

Parameter	Location	Max Concentration (µg/l)	Exceedance of DWS	Exceedance of EQS
Selenium	BH03	16	X	
Zinc	BH01, BH03, WS05	12		X
Sulphate	WS03-WS06	983,900		X
Chloride	WS03-WS05	1,280,000		X

Table 19 shows that analysis of groundwater beneath the site indicates that only Selenium exceeds the DWS, while zinc, sulphates and chloride exceed the Coastal EQS. The exceedance of the DWS for Selenium is marginal (a magnitude of 1.6) and there are no potable extractions in the vicinity of the site, while the EQS exceedances are not replicated in surface waters within the hydrological catchment according to published Environment Agency monitoring data.

While unacceptable risk cannot be demonstrated to controlled waters at this time, the possibility of pathways for contaminants from soils to groundwater or surface water being created by the development (e.g. along services or foundations) or during the construction phase must be considered as part of the scheme design.

7.2.3 Ground Gas Risk Assessment

The ground gas assessment is based on a three ground gas monitoring events undertaken during May and June 2018. Details of the ground gas monitoring is provided in Appendix E.

The results of the gas monitoring are summarised in Table 20 and indicate that:

- Methane was recorded at levels <0.1 – 0.7% Vol. which is below the lower explosive limit.
- Carbon dioxide was recorded at levels <0.1 – 3.9% Vol.
- Oxygen was recorded at levels between 14.4– 20.7% Vol;
- Gas flow rates were recorded between -17.0 and 7.3l/hr;

Potential risks posed by the identified ground gas regime have been considered using the methodology outlined in BS 8485:2015.

A summary of the Gas monitoring is given in Table 20 which includes the Characteristic Situation per borehole. The published guidance including BS8485 and CIRIA C665 indicates that there is a six-fold scale of Characteristic Situations for the potential emission of ground gas, mainly methane and carbon dioxide, which are related to the setting of the site and the gassing potential of the ground. The Characteristic Situation is determined from data on monitored gas concentrations and flow rates. Characteristic Situation 1 is essentially very low risk typical of natural soils with low gassing potential whereas Characteristic Situation 6 is very high risk typical of young or recent active landfills. In order to calculate the worst case characteristic situation the maximum carbon dioxide concentration of 3.9% and a worst case flow rate, assuming negatives value have the potential to be positive, of 17l/hr were used to calculate the Gas Screening Value. This is therefore calculated as 0.29. Furthermore concentrations of Carbon Dioxide and Methane are below 5% and 1% respectively which, as defined by BS8485:2015, means the site is classified as Characteristic Situation (CS) 2.

In the six-fold scale CS2 denotes a low risk from ground gas.

The Characteristic Situation is then used to define the level of protection from ground gas to be built into the development, taking account of the "Type" of building development which relates to the sensitivity of the development and its use. The range of protection measures are rated according to a scoring (points) scale in BS8485, thus the designer can assemble a range of measures which together reach the required aggregate score for the Characteristic Situation and building type being dealt with. It is considered that in accordance with the development proposals, the majority of the proposed generation plant and buildings on site would fall into a "Type D" industrial style buildings which for a CS2, where the made ground is left in place, will require 1.5 points of gas protection. This is a relatively low level of protection consistent with the CS rating. However any smaller ancillary buildings will be classified as "Type C" which will require a higher level of protection which AECOM considers would be 2.5 points of gas protection in the event that the made ground is left in place.

However the highest concentrations of Carbon Dioxide and flow were detected in shallow Made Ground. Should Made Ground be removed as part of site preparation the Gas screening value, which would be defined by the gassing potential of the natural strata, would be 0.0584 which would classify the site as CS 1, very low risk, where no gas protection measures are required.

Table 20 Summary of ground Gas Monitoring

Exploratory Hole	Stratum	Date	Barometric Pressure (mb)	Peak Flow rate (l/h)	Steady Flow	Peak CO2 (% vol)	Peak CH4 (% vol)	GSV	Characteristic Situation CO2	GSV (l/hr)	Characteristic Situation CH4	Min O2 (% vol)

7.2.3.1 Discussion of Risks to Ecological Receptors

The Statutory Guidance which accompanies Part 2A of the Environmental Protection Act 1990 defines ecological receptors as any ecological system, or living organism forming part of such a system, within a location which is:

- A site of special scientific interest (under section 28 of the Wildlife and Countryside Act 1981)
- A national nature reserve (under s.35 of the 1981 Act)
- A marine nature reserve (under s.36 of the 1981 Act)
- An area of special protection for birds (under s.3 of the 1981 Act)
- A “European site” within the meaning of regulation 8 of the Conservation of Habitats and Species Regulations 2010
- Any habitat or site afforded policy protection under section 176 of the National Planning Policy Framework 2018 (NPPF) on nature conservation (i.e. candidate Special Areas of Conservation, potential Special Protection Areas and listed Ramsar sites); or
- Any nature reserve established under section 21 of the National Parks and Access to the Countryside Act 1949.

Any risk assessment must consider whether significant harm is being caused or a significant possibility of significant harm exists to any given ecological receptor. Harm in this context could be defined as;

- Harm which results in an irreversible adverse change, or in some other substantial adverse change, in the functioning of the ecological system within any substantial part of that location; or
- Harm which significantly affects any species of special interest within that location and which endangers the long-term maintenance of the population of that species at that location.
- In the case of “European Sites”, harm can exist where the sites designation could be affected by the presence of a contaminant linkage.

A significant possibility of significant harm exists where significant harm is more likely than not to exist for any given linkage or where there is a reasonable possibility of significant harm of that description being caused, and if that harm were to occur, it would result in such a degree of damage to features of special interest at the location in question that they would be beyond any practicable possibility of restoration.

In the case of this site, there are a number of potentially sensitive ecological sites in the wider area, but the closest (the Humber Estuary which is a SSSI, SPA and Ramsar site) is 1.3km away and so unlikely to be affected by pollutants present on the site. Routine monitoring of the ecological receptors in the Humber Estuary does not suggest that there is currently an unacceptable risk to those receptors.

7.3 Revised Conceptual Site Model

7.3.1 Introduction

A refined conceptual site model (CSM) has been developed on the basis of the desk study and the findings of the ground investigation and contamination assessment.

To assess the potential geo-environmental impacts associated with chemicals of potential concern in the section, the conceptual model has been revised using the source pathway receptor approach, promoted by DEFRA and the Environment Agency. For there to be an identifiable risk, not only must there be contaminants present across the section (source) there must also be a receptor and a pathway which allows the source to impact on the receptor.

7.3.2 Risk Assessment Framework

The site, in terms of potential land contamination, will be regulated by the local authority (North Lincolnshire County Council) under the Town and Country Planning Act 1990 (as amended), taking account of the National Planning Policy Framework 2012, with the Environment Agency, Natural England and English Heritage acting as statutory consultees.

The 'suitable for use' approach is adopted for the assessment of contaminated land where remedial measures are only undertaken where unacceptable risks to human health or the environment are realised taking into account the use (or proposed use) of the land in question and the environmental setting.

Additional environmental liabilities can arise through provisions contained within statutory legislation including Part 2A of the EPA 1990, the Water Resources Act 1991, the Groundwater Regulations 2009 and the Water Act 2003.

Current best practice recommends that the determination of health hazards due to contaminated land is based on the principle of risk assessment, as outlined in the Statutory Guidance to Part 2A (2012) and CLR11.

The risk assessment process for environmental contaminants is based on a source-pathway-receptor analysis. These terms can be defined as follows:

- Source: hazardous substance that has the potential to cause adverse impacts;
- Pathway: route whereby a hazardous substance may come into contact with the receptor: examples include ingestion of contaminated soil and leaching of contaminants from soil into watercourses; and
- Receptor: target that may be affected by contamination: examples include human occupants / users of site, water resources (surface waters or groundwater), or structures.

For a risk to be present there must be a relevant pollutant linkage; i.e. a mechanism whereby a source impacts on a sensitive receptor via a pathway resulting in potentially significant harm.

7.3.3 Pollutant Linkages

The Potential Pollutant Linkages identified in the previous AECOM report "*VPI Immingham Phase I Geo-environmental Assessment* have been revised following the completion of the ground investigation and the residual linkages are presented below in Table 21. Linkages previously assessed to be 'Low' risk in the Phase 1 Desk Study document have been removed from the table:

Table 21: Revised Conceptual Site Model

Source	Pathway	Receptor	Preliminary Level of Risk	Discussion & Mitigation	Residual Level of Risk
On site e.g. Made Ground, Hard Ground and Historic Landfill	Direct dermal contact/ingestion/inhalation;	On-site construction workers Off-site workers	Moderate	A Stage 2 Risk Assessment of the results of the ground investigation has not deemed that the soils pose an unacceptable risk to human health for the proposed end use. Low levels of asbestos fibres were found to be present in made ground at several locations on the site, but these concentrations are not sufficient to present a risk to receptors on adjacent sites during construction or to the proposed development which will be covered by hardstanding or structures. Visual and Olfactory evidence of impacted soil was encountered in several locations therefore during construction the use of correct PPE and an appropriate Construction Environmental Management Plan (CEMP) will protect construction workers from exposure pathways created by excavations and stockpiled material and make sure that migration of contaminants to more sensitive adjacent land uses is controlled.	Low
	Inhalation of vapours;		Moderate		Low
	Inhalation of asbestos fibres				
	Inhalation of ground gas, i.e. methane and carbon dioxide	Neighbouring residents Future site workers	Moderate	A preliminary assessment of measured gas concentrations and flow rates in accordance with BS8485:20015 has determined that the overall 'Characteristic Gas Classification' for the site is Category 2 ,It is considered that in accordance the majority of the proposed power generation plant and buildings on site would fall into a Type D industrial style buildings which for a CS2 will require 1.5 points of gas protection however any smaller ancillary buildings will be classified as type C which will require 2.5 points of gas protection. However if Made Ground is removed as part of the pre construction works the site would classify as CS1 where no protection measures are required. The Construction Phase Plan should make sure that construction workers take suitable precautions if working in enclosed spaces	Low
	Direct run off into surface waters e.g. River Humber and nearby drains	Controlled water courses e.g. River Humber and groundwater within superficial deposits (secondary A) and bedrock (secondary	Moderate	Concentrations of various substances were found to be present in the soils at concentrations above both relevant Water Target Values for those substances. However, analysis of groundwater samples does not indicate that those concentrations in soil are leading to exceedances in the underlying groundwater.	Low
	Vertical and lateral migration in made ground/superficial deposits (Secondary A aquifer), including into deeper groundwater (Secondary B aquifer);		Moderate	An appropriate CEMP should minimise the risk of run-off from site-won material, while further risk assessment may be required with regard foundation design to prevent the creation of additional pathways to deeper bodies of groundwater. An appropriate risk assessment will be required for any piled foundations that are required in the final design. There are concentrations above the relevant WTV of a variety of contaminants in the soils below the site and deep foundations may create pathways through	Low

	Vertical and lateral migration of ground/surface waters along preferential pathways, including to surface waters;	B).	Moderate	less permeable layers from the unsaturated zone to sensitive groundwater below	Low
	Direct impact to buried infrastructure;	Buried infrastructure .e.g. pipes and underground utilities	Moderate/ Low	Elevated concentrations of sulphates have been noted in groundwater samples, but the water table is at sufficient depth and is largely confined by less permeable clay strata, so contact with buried services is unlikely as services will be located within clean backfill, in the unsaturated zone. Consideration of sulphates in groundwater may need to be given when designing building foundations, especially piled foundations. Advice should be sought from the local water supply company to confirm the appropriate pipe specification for the identified ground conditions and a UKWIR compliant risk assessment may be required to specify pipework.	Low
	Humber Estuary Ramsar, SPA, SSSI	Ecological receptors	Moderate	The distance to the Humber makes it unlikely that there is an unacceptable risk to ecological receptors, given the small number and relatively low magnitude of the exceedances detected during groundwater monitoring.	Low
Offsite power plant and oil refinery operations, including spills and leaks	Direct run off from on-site resources into surface waters e.g. River Humber and nearby drains;	Controlled water courses e.g. River Humber and deeper groundwater within superficial deposits (secondary A) and bedrock (secondary B);	Moderate	The ground investigation gave no indication of off-site contaminant sources transiting across the site as surface run off or within shallow groundwater. If such sources were found during construction phase, care should be taken to make sure that no preferential pathways are created. If this were to occur it would be notable as a health and safety issue during construction phase rather than as an ongoing environmental concern during operational phase.	Low
	Vertical and lateral migration in made ground/superficial deposits (Secondary A aquifer) beneath the site;		Moderate		Low
	Vertical and lateral migration of ground/surface waters along preferential pathways;		Moderate/ Low		Low
	Inhalation of vapours;	On-site construction workers Future site workers	Moderate/ Low	No contamination plume with potential to cause vapours was identified coming from the adjacent site.	Low

Offsite land use inc. sand/clay pits, landfill and petrol station	Direct run off from Off-site resources into surface waters e.g. River Humber and nearby drains;	On-site construction workers	Moderate	The ground investigation gave no indication of off-site contaminant sources transiting across the site as surface run off or within shallow groundwater. If such sources were found during construction phase, care should be taken to make sure that no preferential pathways are created. If this were to occur it would be notable as a health and safety issue during construction phase rather than as an ongoing environmental concern during operational phase.	Low
	Vertical and lateral migration in made ground/superficial deposits (Secondary A aquifer), including into deeper groundwater (Secondary B aquifer) beneath the site;	Controlled water courses e.g. River Humber and groundwater within superficial deposits (secondary A) and bedrock (secondary B)	Moderate		Low
	Vertical and lateral migration of ground/surface waters along preferential pathways;		Moderate		Low
	Direct impact to buried infrastructure onsite;	Buried infrastructure .e.g. pipes and utilities		The ground investigation did not indicate the presence of chemicals within the unsaturated zone which could cause harm to buried infrastructure. Advice should be sought from the local water supply company to confirm the appropriate pipe specification for the identified ground conditions. Concrete classification for foundation….. covered in section xx….	Low

7.3.4 Residual Contaminant Linkages

Following the Stage 2 Risk Assessment and consideration of the findings of the Ground Investigation, all outstanding pollutant linkages can be regarded as having a low level of risk, assuming that an appropriate CEMP is developed for the development and that appropriate risk assessment including consideration of ground conditions is applied to the design of piled foundations.

7.4 Summary of Contaminant Linkages

Table 22. Summary of Contaminant Linkages

	Conclusions	Recommendations
Buildings (Ground Gas)	A preliminary assessment of measured gas concentrations and flow rates in accordance with rates in accordance with BS8485:20015 has determined that the overall 'Characteristic Gas Classification' for the site is Category 2It is considered that in accordance the majority of the proposed power generation plant and buildings on site would fall into a Type D industrial style buildings which for a CS2 will require 1.5 points of gas protection however any smaller ancillary buildings will be classified as type C which will require 2.5 points of gas protection. However if Made Ground is removed as part of the pre-construction works the site would classify as CS1 where no protection measures are required.	Where required ground gas protection measures as defined in BS8485 should be incorporated in the buildings. Standard good health and safety practice and PPE should be specified within the Construction Phase Plan in order to protect construction workers from gas within confined spaces.
Human Health	Stage 2 Screening of laboratory samples against appropriate GAC does not indicate any risk to human health for the current or proposed land use. An appropriate CEMP and the use of standard PPE will be sufficient to protect construction workers from contact with substances present in the soil, given the concentrations encountered during the ground investigation.	No remedial actions are required to protect site users or future site users from substances in the soils. The stage 2 risk assessment does not assess the specific risks to construction workers, but appropriate PPE and CEMP precautions will be sufficient to mitigate risk to construction works.
Controlled Waters	Assessment of risks to controlled waters from leachable (soluble) concentrations of potentially polluting substances in soil, when compared conservatively against DWS and EQS, show a number of exceedances. However, this is not reflected in the groundwater below the site and the distance to sensitive surface waters makes the possibility of harm to sensitive controlled waters from leachable soil substances unlikely. There are concentrations above the relevant screening criteria for a variety of contaminants in the soils below the site and deep foundations may create pathways through less permeable layers from the unsaturated zone to sensitive groundwater below. However the risks associated with deep foundations can be mitigated by means of risk assessment specific to the design and construction proposals.	No remedial measures are required on site to protect controlled waters. However any piles should be designed in accordance with the EA guidance entitled *Piling and Penetrative Ground Improvement Methods on Land Affected by Contamination: Guidance on Pollution Prevention (2001)*
Ecological Receptors	The Humber Estuary and Rosper Road Pools represents ecological receptors, but the distance to the receptor is such that harm is unlikely to be caused.	Although it is not considered the site is a significant risk to Statutory ecological receptors . A landscape architected should be provided with the chemical analysis in order to establish suitable plant species for the site.
Subsurface infrastructure		Advice should be sought from the local water supply company to confirm the appropriate pipe specification for the identified ground conditions. Concrete Aggressivity is discussed in Section 5.5

8. Geotechnical Assessment

8.1 Proposed Works

As noted in Section 1, VPI Immingham LLP are exploring the development of several gas fired power generation and storage projects including reciprocating engines and an OCGT power plant. The new extension will be situated north of the current site, on land presently occupied by a car park and undeveloped land. At the time of writing this report, there is no structural loading information available so the following engineering assessment is based on general assumptions.

8.2 Engineering Assessment

With no structural loading or settlement criteria information available, it is assumed that the CHP extension will contain a number of relatively heavy and sensitive structures. The proposed site layout drawings presented in Appendix B also shows several individual buildings which are linked by connections or directly adjacent to one another. Possible foundation solutions that could be progressed for the project include:

8.2.1 Shallow Foundations

Based on the recent GI, Made Ground material typically extends up to 1.5m bgl. Due to its variable nature, the Made Ground strata could not be relied upon as a stable founding material. Should shallow foundations be used, they would need to be placed upon natural ground, such as the firm to stiff clay, Glacial Till layer. This could be in the form of a large raft foundation or individual pad foundations under the separate buildings. The 1986 version of BS8004 – Code of Practice for Foundations estimates that firm to stiff clays, like those encountered on site, could achieve typical allowable bearing resistance values between 75kN/m^2 to 150kN/m^2. Further analysis will need to be undertaken to assess the potential bearing pressures produced by the CHP extension in comparison with the soils bearing resistance.

BS8004 also notes that founding on firm to stiff clays of low to medium compressibility could lead to long-term consolidation settlement. It is therefore advised that the settlement of sensitive foundations/structures should be considered. Natural variations in the Glacial Till stiffness or composition could create differential displacements between individual pad foundations. Creating a large raft foundation to support groups of buildings could help control the differential displacement between points but would result in higher total settlements. It should be noted that, if a large raft foundation at > 2.0m depth is selected, large quantities of existing material would need to be excavated as part of the construction process. This could be both environmentally and economically expensive.

In summary, it is considered that lightly loaded structures of the appropriate structural form could be founded on shallow foundations placed in glacial till of at-least firm to stiff consistency at the site.

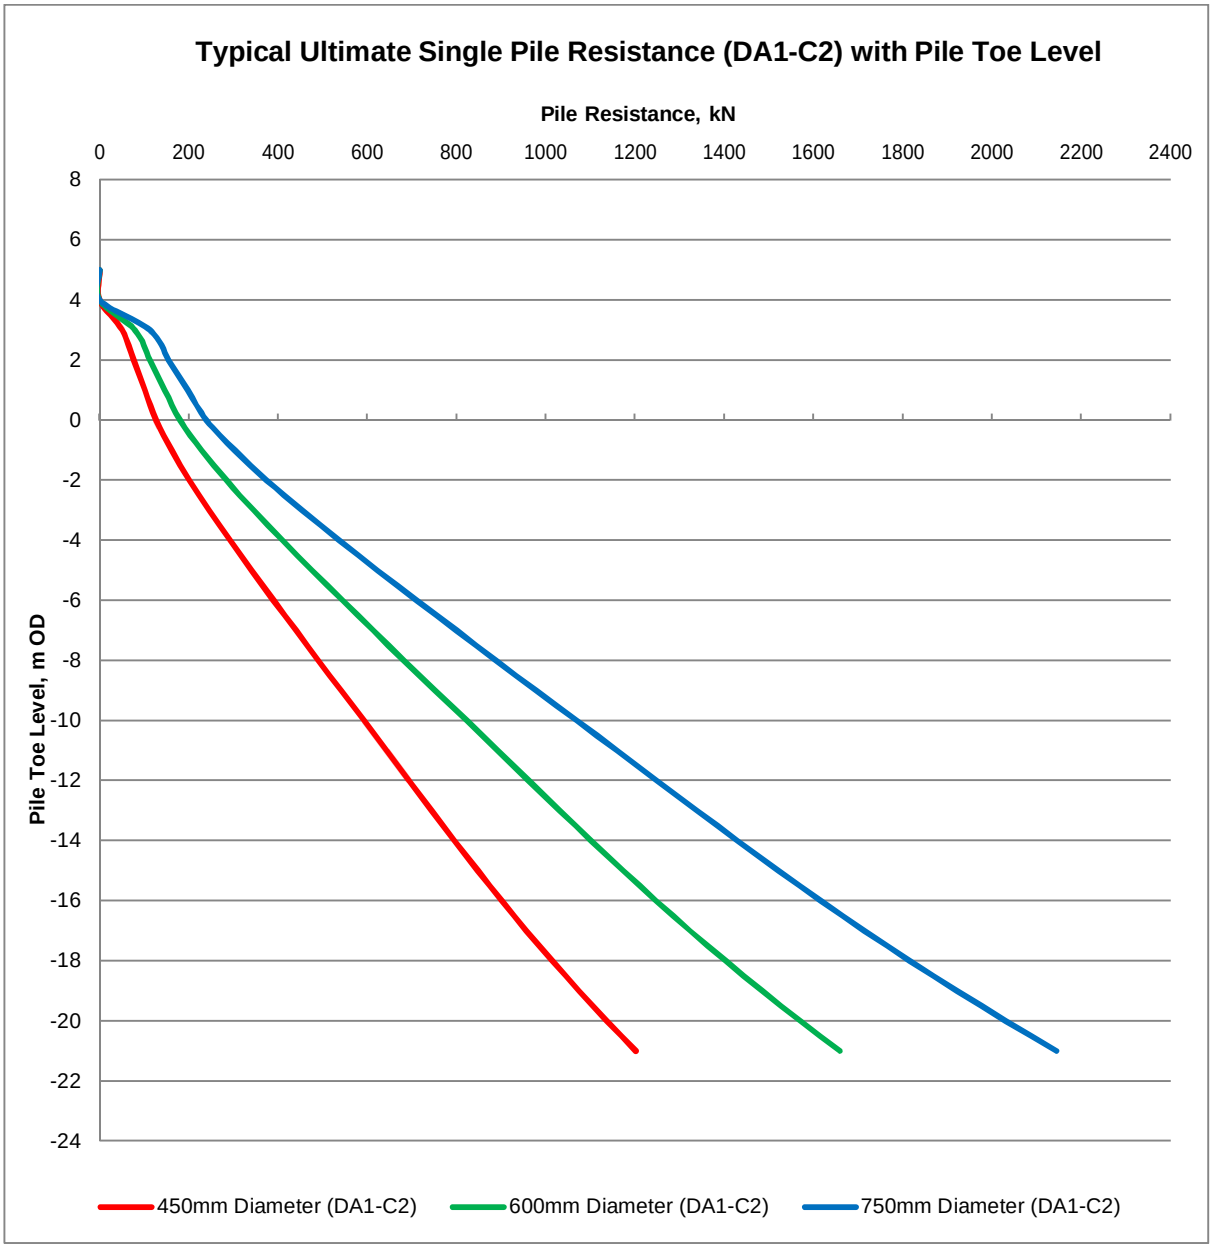
8.2.2 Deep Foundations

Deep foundations such as piles are often used to transfer loads through weak, compressible soils to more competent soils or rocks. In the case of the generation plant and buildings, should the applied structural loads or settlement criteria supersede the capacity of shallow foundations, as discussed in Section 7.2.1, deep piled foundations could be introduced. Based on the ground conditions summarised in Section 4 and Section 5, the piles would need to be drilled to a set depth within the Glacial Till stratum or socketed into the Burnham Chalk Formation. Without an indication of the typical pile loads, the pile lengths cannot be determined. Figure 7.2.2-1 however, gives an indication of the typical ultimate single pile resistance for a range of pile diameters. Pile resistances are produced for the more critical Design Approach 1 – Combination 2 (DA1-C2), which are based on guidance given in BS EN 1997-1:2004 – Eurocode 7 – Geotechnical Design.

The graph assumes that the piles are bored with a Continuous Flight Auger (CFA) and will terminate within the Glacial Till layer. Should the piles need to penetrate the Burnham Chalk Formation, further GI information will be required to develop a safe design.

Two design approaches can be adopted for piled foundations; placing the buildings on individual pile caps/rafts or creating a piled raft to cover large sections of the site. A piled raft will require a larger quantity of construction work but will ensure a stable design which will limit differential settlements between the buildings. Individual pile caps/rafts for separate buildings will allow for more flexibility in the pile design and enable costs to be optimised.

Both shallow and deep foundation options will need to be investigated further upon the release of more structural information.



9. Geotechnical Risk Register

9.1 Assessing Geotechnical Risk

A Geotechnical Risk Register has been compiled to show the degree of risk attached to various ground related aspects of the proposed scheme. The purpose of the register is to produce an assessment of the risk to the project posed by common ground related problems and identify suitable mitigation measures to control the risk to an acceptable level. The risk register should be developed and refined as the geotechnical design and assessment progress, such that the register will allow management of the geotechnical risks.

The inclusion of a risk in the risk register does not constitute confirmation that the problem actually exists at the site. A probability of 'very unlikely' is indicative of a condition which the available evidence suggests should not be present. For the purposes of this risk register, the magnitude of each impact and the resulting severity of risk is measured against that which would 'normally' be expected for each element.

The Geotechnical Risk Register has been developed in general accordance with the guidance presented in ICE/DETR Document 'Managing Geotechnical Risk' (2001) and the HA document HD41/03 and HD22/02. The degree of risk (R) is determined by combining an assessment of the probability (P) of the hazard with an assessment of the impact (I) the hazard and associated mitigation will cause if it occurs (R = P x I).

9.2 Geotechnical Hazards

The following section describes the ground-related hazards that have been identified during the investigation.

9.2.1 Variable Ground

Based on the 2018 Socotec UK Limited GI, up to 1.7m of Made Ground has been identified across the site. Due to nature of Made Ground, its properties are likely to be highly variable across the site. It is advised that any foundation solution does not rely on this material for support.

Granular layers within the Glacial Deposits could lead to settlement occurring at varying rates where these layers are and are not present. The possibility of differential settlement caused by such behaviours should be considered in the foundation design.

Burnham Chalk Formation was recorded at the base of four boreholes during the 2018 GI. The upper layers were described as weathered, extremely weak to weak chalk. Chalk is an unusual engineering material and can degenerate into a weak soil with intense weathering or mishandling. It also has the propensity to effectively re-cement with time. The design properties of Chalk are very variable, depending on the density and structure of the material. Should the proposed foundations terminate within, or close to, the Burnham Chalk Formation, further geotechnical information will be required to progress the design.

9.2.2 Ground Water

Seepages have been noted at various levels within the site. Where granular materials are present, water could flow at a relatively rapid rate, potentially undermining excavation stability. Water flowing from granular layers and from the chalk at depth which is under significant pressure could also have a detrimental effect on pile stability during construction. Continuous Flight Auger (CFA) piling, and / or bored piling under a bentonite drilling fluid, would help mitigate this problem.

9.2.3 Buried Obstructions or Services

As noted in Section 2, the site is largely surrounded by a mix of industrial and agricultural land use. This means there is the potential for buried services to be present at the site. Without service plans available, it should be assumed that there is a high risk of underground obstructions. Prior to the commencement of any construction work, further information on the potential services or buried obstructions should be sought from the relevant providers and then identified by inspection. Deeper areas of Made Ground and buried obstructions may be present at the site.

9.2.4 Risk Register of Geotechnical Hazards

The geotechnical risks associated with the proposed works are summarised in Table 22 below

Table 23 Hazard Index for Geotechnical Risk

Risk Number	Hazard/Risk	Cause	Risk Before Mitigation			Mitigation	Risk After Mitigation		
			P	I	R		P	I	R
GEO 001	Variable properties of Made Ground.	Historical site use	5	3	15	Proposed foundation solutions should not rely upon the Made Ground material. For example, piled foundations or shallow foundations founded on competent Glacial Till.	1	2	2
GEO 002	Limited ground information on Burnham Chalk Formation. Unable to derive accurate parameters for design, if required.	Insufficient borehole depth during previous ground investigations.	3	3	9	Should the proposed foundation solution come in close proximity to the Burnham Chalk Formation, further GI will be required to help derive accurate rock parameters for design.	1	2	2
GEO 003	Unknown services and buried obstructions at the site. Proposed foundation design could clash with services.	Historic site use.	4	4	16	Service plans are to be sought from providers prior to breaking ground. Area should also be surveyed to confirm potential services at the site. Buried obstructions / deep Made Ground are to be excavated during construction.	2	2	4
GEO 04	High ground water flow within granular soils and from the chalk Collapse of excavations/ pile holes.	Natural geology of the site.	3	3	9	Deep excavations should be supported when granular soils are present. CFA piling and / or use of bentonite drilling fluid should be used to construct piles.	1	2	2

Risk = Probability x Impact (also see CIRIA SP125)

16-25	Very High Risk	Unacceptable. Re-examine activities to provide lower risk.
9-15	High risk	Further mitigation measures required and/or alter method of work. Seek approval from all stakeholders if risk cannot be reduced.
6-8	Medium Risk	Tolerable only if further mitigation is not reasonably practical and there is need to continue activity with identified controls.
1-5	Low Risk	Broadly acceptable if all reasonably practicable control measures in place.

Appendix B Risk Assessment Principles

Risk Assessment Principles

Current good practice recommends that the determination of hazards due to contaminated land is based on the principle of risk assessment, as outlined in the Environment Agency guidance on Model Procedures for the Management of Land Contamination (CLR 11).

For a risk to be present, there must be a viable pollutant linkage; i.e. a mechanism whereby a source impacts on a sensitive receptor via a pathway.

Assessments of risks associated with each of these pollutant linkages are discussed in the following sections.

Using criteria broadly based on those presented in EA, Chartered Institute of Environmental Health (CIEH) and National House Building Council (NHBC) R&D Publication 66 'Guidance for the Safe Development of Housing on Land Affected by Contamination' (2008), the magnitude of the risk associated with potential contamination at the site has been assessed. To do this an estimate is made of:

- The magnitude of the potential consequence (i.e. severity); and
- The magnitude of probability (i.e. likelihood).

The severity of the risk is classified according to the criteria in **Table C1**, below:

1. Table C1: Summary of Potential Pollutant Linkages

- SEVERITY	- DEFINITION AND EXAMPLES
Severe	- Acute risks to human health, likely to result in "significant harm" (e.g. very high concentrations of contaminants/ground gases) - Catastrophic damage to buildings/property (e.g. by explosion, sites with high gassing potential, extensive VOC contamination) - Major pollution of controlled waters (e.g. surface watercourses or Principal aquifers/source protection zones) - Short term risk to a particular ecosystem
Medium	- Chronic (long-term) risk to human health likely to result in "significant harm" (e.g. elevated concentration of contaminants/ground gases) - Pollution of sensitive controlled waters (e.g. surface watercourses or Principal/ Secondary aquifers) - Significant effects on sensitive ecosystems or species
Mild	- Pollution of non-sensitive waters (e.g. smaller surface watercourses or non-aquifers) - Significant damage to crops, buildings, structures or services (e.g. by explosion, sites with medium gassing potential, elevated concentrations of contaminants)
Minor	- Non-permanent human health effects (requirement for protective equipment during site works to mitigate health effects) - Damage to non-sensitive ecosystems or species - Minor (easily repairable) damage to buildings, structures or services (e.g. by explosion, sites with low gassing potential)

The probability of the risk occurring is classified according to the criteria in **Table C2**, below:

2. Table C2: Likelihood of Risk Occurrence

- LIKELIHOOD	- EXPLANATION
High	- Contaminant linkage may be present that appears very likely in the short-term and risk is almost certain to occur in the long term, or there is evidence of harm to the receptor
Likely	- Contaminant linkage may be present, and it is probable that the risk will occur over the long term
Low	- Contaminant linkage may be present and there is a possibility of the risk occurring, although there is no certainty that it will do so.
Unlikely	- Contaminant linkage may be present but the circumstances under which harm would occur even in the long-term are improbable.

An overall evaluation of the level of risk is gained from a comparison of the severity and probability, as shown in **Table C3**, below:

3. Table C3: Risk Based on Comparison of Likelihood and Severity

		SEVERITY			
LIKELIHOOD		**SEVERE**	**MEDIUM**	**MILD**	**MINOR**
	HIGH	Very High	High	Moderate	Moderate/Low
	LIKELY	High	Moderate	Moderate/Low	Low
	LOW	Moderate	Moderate/Low	Low	Very Low
	UNLIKELY	Moderate/Low	Low	Very Low	Very Low

CONTENTS

1 INTRODUCTION

In March 2018 SOCOTEC UK Limited was commissioned by AECOM Environmental Solutions Ltd (AECOM) on behalf of VPI Immingham, to carry out a ground investigation at Total Lindsey Oil Refinery (TLOR). The investigation was required to obtain geotechnical information for the proposed development.

The scope of the investigation was specified by AECOM and comprised cable percussion and rotary drilled boreholes, trial pits and laboratory testing. The investigation was performed in accordance with the contract specification, and the general requirements of BS 5930 (2015), BS EN 1997-2 (2007), BS EN ISO 22475-1 (2006) and other relevant related standards identified below. The fieldwork took place between 5 and 20 April.

This report presents the factual records of the fieldwork and laboratory testing. The information is also presented as digital data as defined in AGS (2017).

2 SITE SETTING

2.1 Location and Description

The site is adjacent to the east side of Total Lindsey Oil Refinery, approximately 4 km north west of Immingham town centre, Lincolnshire. The National Grid reference is TA 167 175, see Site Location Plan in Appendix A.

The site is a L-shaped parcel of land, approximately 350 by 200 m, and generally flat and level.

The majority of the site, the southern portion (about 350 by 120 m), comprises rough grass and scrub land, which is it is boggy in places. There are several soil mounds, up to about 5 m in height.

The north west portion is within the perimeter fence of the adjacent car park, and comprises a compacted generally flat hardcore surface with very little vegetation.

To the north the site is bound by a carpark, belonging to TLOR, and to the west is infrastructure associated with the refinery, including access roads, railway lines, plant and equipment. To the south is VPI Immingham, a power generation facility. To the east is open farmland and the Humber Estuary beyond, approximately 500 m away.

2.2 Published Geology

The published geological map for the area, BGS Sheet 90 (1990) and the BGS Geology of Britain Viewer (2018) show the site located on Glacial Till over bedrock of the Burnham Chalk Formation.

3 FIELDWORK

3.1 General

The exploratory hole locations were selected by AECOM and set out from local features. The co-ordinates and reduced levels were surveyed by SOCOTEC to National Grid and Ordnance Datum and the locations are shown on the Site Plan in Appendix A

3.2 Exploratory Holes

The exploratory holes are listed in the following table.

TABLE 1: SUMMARY OF EXPLORATORY HOLES

TYPE	QUANTITY	DEPTH RANGE (m)	REMARKS
Cable Percussion Boring	3	22.34 to 28.66	BH1, BH2 and BH5
Cable Percussion Boring extended by Rotary Core Drilling/Open Hole Drilling	3	28.60 to 34.60	BH3, BH4 and BH6
Dynamic Sampling	8	3.75 to 5.45	WS1 to WS8
Trial Pits/ Trenches	13	2.50 to 4.60	TP1 to TP10 and TT1 to TT3

The exploratory hole logs are presented in Appendix B. These provide information including the equipment and methods used, samples taken, tests carried out, water observations and descriptions of the strata encountered. Explanation of the terms and abbreviations used on the logs is given in the Key to Exploratory Hole Records in Appendix B, together with other explanatory information. The logging of soil and rock materials is in accordance with BS 5930 (2015).

Standard penetration tests (SPT) in the boreholes were carried out in accordance with BS EN ISO 22476-3+A1 (2011) and the SPT hammer energy ratio certificate is included in Appendix B. The SPT results are presented on the logs as uncorrected N values.

Photographs of the trial pits and rotary drilled core are presented in Appendix E.

On completion of the fieldwork geotechnical samples were transported to the Doncaster laboratory of SOCOTEC for testing and temporary retention.

3.3 Groundwater and Gas Monitoring

Instrumentation installed in the exploratory holes for groundwater and gas monitoring are shown on the logs and summarised in Appendix C. SOCOTEC were not required to undertake any post fieldwork.

4 LABORATORY TESTING

Geotechnical laboratory testing was scheduled by AECOM and was carried out in accordance with BS 1377 (1990), unless otherwise stated. The testing is summarised below and the results are presented in Appendix E.

- Moisture Content Determination
- Atterberg Limit Determination
- Particle Density
- Particle Size Distribution Analysis
- Unconsolidated Undrained Triaxial Compression Testing
- Consolidated Undrained Triaxial Compression Testing
- One Dimensional Oedometer Consolidation Testing
- Determination of Consolidation Properties Using a Hydraulic Cell
- Dry Density / Moisture Content Relationship
- California Bearing Ratio
- pH, Water Soluble Sulphate, Acid Soluble Sulphate and Total Sulphur Content of Soils Test methods are BS 1377 or others recognised in BRE Special Digest 1 (2005)
- Loss on Ignition
- Organic Matter

SOCOTEC

SAMPLES

Undisturbed

U	Driven tube sample	nominally 100 mm diameter and full recovery unless otherwise stated
UT	Driven thin wall tube sample	
TW	Pushed thin wall tube sample	
P	Pushed piston sample	
L	Liner sample from dynamic (windowless) sampling. Full recovery unless otherwise stated	
CBR	CBR mould sample	
BLK	Block sample	
C / CS	Core sample (from rotary core) taken for laboratory testing.	
AMAL	Amalgamated sample	

Disturbed

D	Small sample
B	Bulk sample

Other

W	Water sample
G	Gas sample
	Environmental chemistry samples (in more than one container where appropriate)
ES	Soil sample
EW	Water sample

Comments

Sample reference numbers are assigned to every sample taken. A sample reference of 'NR' indicates that, while an attempt was made to take a tube sample, there was no recovery.

Samples taken from borehole installations (ie water or gas) after hole construction are not shown on the exploratory hole logs.

Specimens for point load testing undertaken on site (or other non-lab location) are not shown on the log.

IN SITU TESTS

SPT S or SPT C — Standard Penetration Test, open shoe (S) or solid cone (C)

The Standard Penetration Test is defined in BS EN ISO 22476-3:2005+A1:2011.
The incremental blow counts are given in the Field Records column; each increment is 75 mm unless stated otherwise and any penetration under self-weight in mm (SW) is noted. Where the full 300 mm test drive is achieved the total number of blows for the test drive is presented as N = ** in the Test column. Where the test drive blows reach 50 the total blow count beyond the seating drive is given (without the N = prefix).

IV	*in situ* vane shear strength, peak (p) and remoulded (r)
HV	Hand vane shear strength, peak (p) and remoulded (r)
PP	Pocket penetrometer test, converted to shear strength
KFH, KRH, KPI	Permeability tests (KFH = falling head, KRH = rising head; KPI = packer inflow); results provided in Field Records column (one value per stage for packer tests)

DRILLING RECORDS

The mechanical indices (TCR/SCR/RQD & If) are defined in BS 5930:2015

TCR	Total Core Recovery, %
SCR	Solid Core Recovery, %
RQD	Rock Quality Designation, %
If	Fracture spacing, mm. Minimum, typical and maximum spacing measurements are presented.
NI	The term non-intact (NI) is used where the core is fragmented.
NA	Used where a measurement is not applicable (eg. If, SCR and RQD in non-rock materials).

Flush returns, estimated percentage with colour where relevant, are given in the Records column

CRF	Core recovered (length in m) in the following run
AZCL	Assessed zone of core loss

GROUNDWATER

▼	Groundwater entry
▽	Depth to groundwater after standing period

Key to Exploratory Hole Records

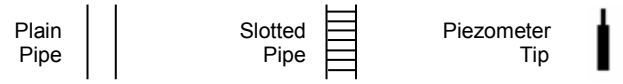
INSTALLATION

Details of standpipe/piezometer installations are given on the Record. Legend column shows installed instrument depths including slotted pipe section or tip depth, response zone filter material type and layers of backfill.

Standpipe/ piezometer

The type of instrument installed is indicated by a code in the Legend column at the depth of the response zone:

SP	Standpipe
SPIE	Standpipe piezometer
PPIE	Pneumatic piezometer
EPIE	Electronic piezometer



Inclinometer or Slip Indicator

The installation of vertical profiling instruments is indicated on the Record. The base of tubing is shown in the Legend column.

The type of instrument installed is indicated by a code in the Legend column at the base of the tubing:

ICE	Biaxial inclinometer
ICM	Inclinometer tubing for use with probe
SLIP	Slip indicator

Settlement Points or Pressure Cells

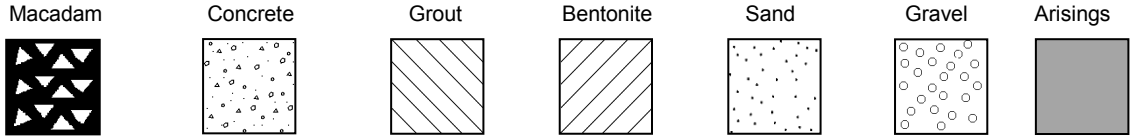
The installation of single point instruments is indicated on the Record. The location of the measuring device is shown in the Legend column.

The type of instrument installed is indicated by a code in the Legend column:

ESET	Electronic settlement cell/gauge
ETM	Magnetic extensometer settlement point
EPCE	Electronic embedment pressure cell
PPCE	Electronic push in pressure cell

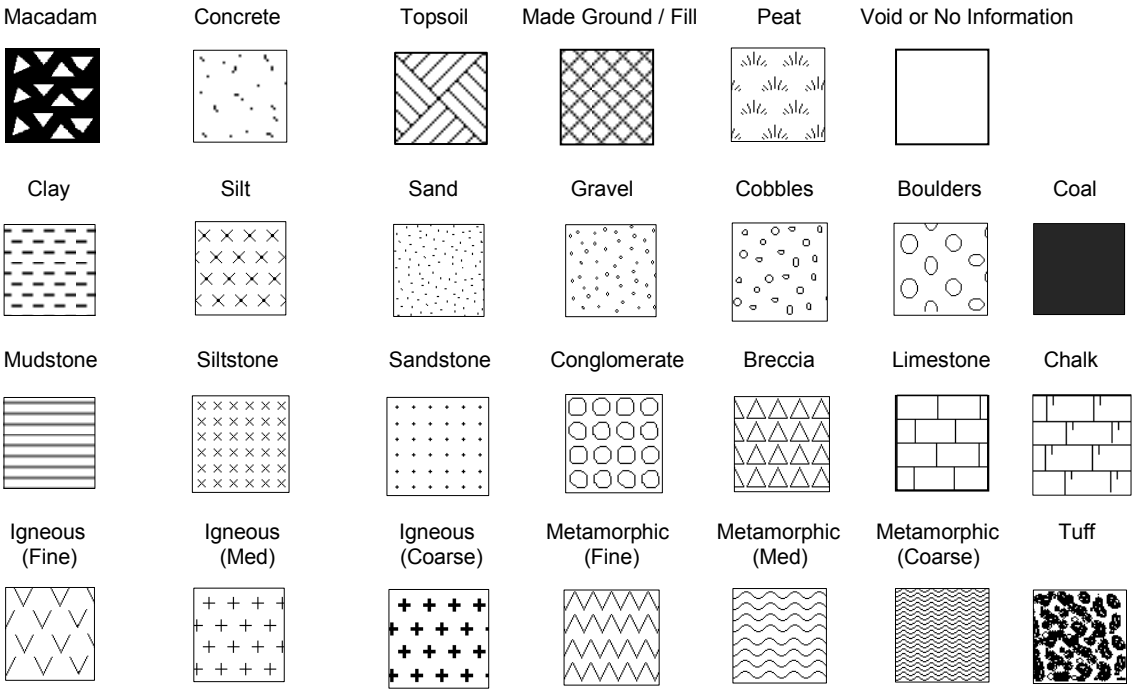
INSTALLATION / BACKFILL LEGENDS

A legend describing the installation is shown in the rightmost column. Legend symbols used to describe the backfill materials are indicated below.



STRATUM LEGENDS

The legend symbols used for graphical representation of soils, rocks and other materials on the borehole logs are shown below. For soils with significant proportions of secondary soil types, a combination of two or more symbols may be used.



Notes:

See report text for full references of standards.

Key to Exploratory Hole Records

NOTES

1 Soils and rocks are described in accordance with BS EN ISO 14688-1:2002+A1:2013 and 14689-1:2003 respectively as amplified by BS 5930:2015.

2 For fine soils, consistency determined during description is reported for those strata where undisturbed samples are available. Where the logger considers that the sample may not be representative of the condition in situ, for whatever reason, the reported consistency is given in brackets. The reliability of the sample is indicated by Probably or Possibly as appropriate. Hence (Probably firm) indicates the logger is reasonably confident of the assessment, but (Possibly firm) means less certainty. Where the samples available are too disturbed to allow a reasonable assessment of the in situ condition, no consistency is given.

3 Evidence of the occurrence of very coarse particles (cobbles and boulders) is presented on the logs. However, because of their size in relation to the exploratory hole these records may not be fully representative of their size and frequency in the ground mass.

4 The declination of bedding and joints is given with respect to the normal to the core axis. Thus in a vertical borehole this will be the dip.

5 The assessment of SCR, RQD and Fracture Spacing excludes artificial fractures.

6 Observations of discernible groundwater entries during the advancement of the exploratory hole are given at the foot of the log and in the Legend column. The absence of a recorded groundwater entry should not, however, be interpreted as a groundwater level below the base of the borehole. Under certain conditions groundwater entry may not be observed, for instance, drilling with water flush or overwater, or boring at a rate faster than water can accumulate in the borehole. Similarly, where water entry observations do exist, groundwater may also be present at higher elevations in the ground than where recorded in the borehole. In addition, where appropriate, water levels in the hole at the time of recovering individual samples or carrying out in situ tests and at shift changes are given in the Records column.

7 The borehole logs present the results of Standard Penetration Tests recorded in the field without correction or interpretation. However, in certain ground conditions (eg high hydraulic head or where very coarse particles are present) some judgement may be necessary in considering whether the results are representative of in situ mass conditions.

Strata Description

Main	Detail	Depth, Level (Thickness)
Dark brown slightly sandy slightly gravelly CLAY with low cobble content. Gravel is subangular to rounded fine to medium, rarely coarse, of chalk and mudstone with occasional concrete, quartz and flint. Cobbles are subangular of chalk. (MADE GROUND)	0.50 rare rootlets	(0.50) 0.50 +5.99
Dark brown, locally mottled black, slightly sandy slightly gravelly CLAY. Gravel is subangular to subrounded fine to medium of chalk, mudstone and rare flint. Strong hydrocarbon odour. (MADE GROUND)		(0.90) 1.40 +5.09
Firm reddish brown, occasionally mottled red, slightly sandy slightly gravelly CLAY. Gravel is angular to subrounded fine to coarse of chalk and mudstone with occasional flint and rare sandstone.		(0.35) 1.75 +4.74
Firm grey, mottled brown, slightly sandy slightly gravelly CLAY. Gravel is angular to subrounded fine to coarse of chalk and mudstone with occasional flint and rare sandstone.	2.10 unknown fibrous rock/material	(0.25) 2.00 +4.49
Firm to stiff indistinctly laminated reddish brown, mottled grey, slightly sandy slightly gravelly CLAY. Gravel is angular to subrounded fine to coarse of chalk and mudstone with occasional flint and rare sandstone.	2.40 occasional pockets of reddish pink clayey fine sand	(1.60) 3.60 +2.89
Firm dark brown slightly sandy slightly gravelly CLAY. Gravel is subangular to rounded fine to medium of chalk.		(0.60) 4.20 +2.29
Brown fine to medium SAND.	4.50-4.60 brown slightly gravelly fine to coarse sand. Gravel is subangular to well rounded fine to medium of chalk and rare quartz	(0.40) 4.60 +1.89
Firm dark brown slightly gravelly sandy CLAY. Gravel is subangular to rounded fine to medium of chalk.		(0.45) 5.05 +1.44
END OF EXPLORATORY HOLE

General notes: Tests carried out in accordance with BS1377: Part 7: 1990, clause 8 for single stage, clause 9 for multistage tests. Specimens nominally 2:1 height diameter ratio and tested at a rate of strain of 2%/minute, unless annotated otherwise. Latex rubber membrane used and membrane correction applied in accordance with BS1377-7 8.5.1.4 unless stated.

Consolidated Undrained Triaxial Compression test with Measurement of Pore Water Pressure (BS1377 : Part 8 : 1990) - Multistage test on a single specimen

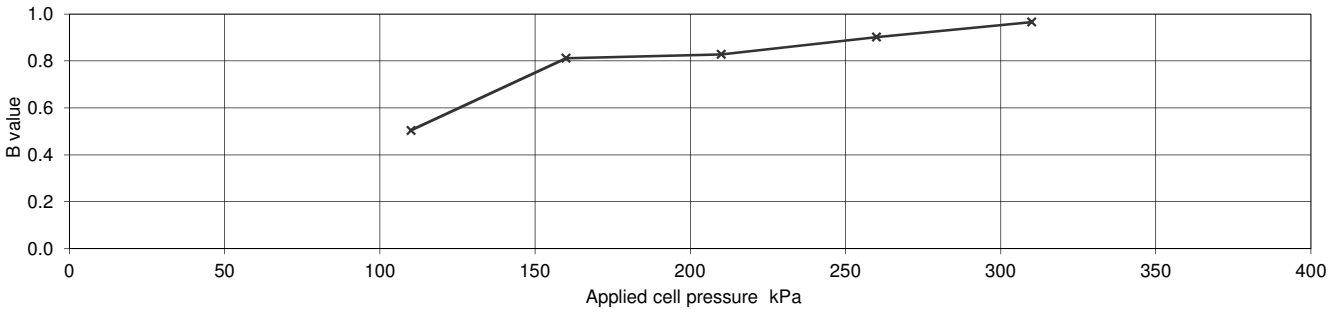
Project No	A8015-18	Sample Details:	Hole No	BH4		
Project Name	IMMINGHAM		Depth (m BGL)	7.50 - 7.95		
			No	18	Type	UT
			ID			
			Spec Ref			

Specimen Details		
Initial		
Length	mm	203.49
Diameter	mm	103.68
Bulk Density	Mg/m³	2.22
Water Content	%	14
Dry density	Mg/m³	1.95
After test		
Bulk Density	Mg/m³	2.23
Water Content	%	13
Dry density	Mg/m³	1.97

Soil Description	Firm brown slightly sandy slightly gravelly CLAY.
Specimen Type /Preparation	UNDISTURBED

Saturation Details		Method of Saturation
		Increments of cell and back pressure
Cell pressure increments	kPa	50
Differential Pressure	kPa	10
Final Cell Pressure	kPa	310
Final pore water pressure	kPa	287.6
Final B Value		0.97



Consolidation Details	Drainage Conditions		From radial boundary and one end			
	Stage No.		1	2	3	
	Cell Pressure applied		365	430	560	kPa
	Back Pressure applied		300	300	300	kPa
	Effective Pressure		65	130	260	kPa
	Pore pressure at start of consolidation		347	374	457	kPa
	Pore pressure at end of consolidation		303	300	302	kPa
	Pore pressure dissipation at end of consolidation		94	100	99	%
Consolidation parameters (see note to BS1377 : pt 8, clause 6.3.4)	Coefficient of Consolidation	C_{vi}	2.17	2.09	1.63	m^2/year
	Coefficient of Compressibility	M_{vi}	0.24	0.12	0.07	m^2/MN
	Coefficient of Permeability (calculated)	k_{vi}	1.6E-10	7.7E-11	3.5E-11	m/s

TEST REPORT

Report No. EFS/187041 (Ver. 1)

SOCOTEC UK Doncaster
Askern Road
Carcroft
Doncaster
South Yorkshire
DN6 8DG

Site: A8015-18 VPI Immingham

The 4 samples described in this report were registered for analysis by SOCOTEC UK Limited on 23-Jun-2018. This report supersedes any versions previously issued by the laboratory.
The analysis was completed by: 03-Jul-2018

The following tables are contained in this report:

On behalf of
SOCOTEC UK Lim[redacted]
Tim Barnes Operations Director
Energy & Waste Services

Date of Issue: 03-Jul-2018

Tests marked '^' have been subcontracted to another laboratory.
Where samples have been flagged as deviant on the Analytical and Deviating Sample Overview, for any reason, the data may not be representative of the sample at the point of sampling and the validity of the data may be affected.
SOCOTEC UK Limited accepts no responsibility for any sampling not carried out by our personnel.

Where individual results are flagged see report notes for status.

Analytical and Deviating Sample Overview

Customer SOCOTEC UK Doncaster
Site A8015-18 VPI Immingham
Report No S187041

Consignment No S75653
Date Logged 23-Jun-2018
In-House Report Due 29-Jun-2018

Please note the results for any subcontracted analysis (identified with a '^') is likely to take up to an additional five working days.

ID Number	Description	MethodID	CustServ	ORGMAT
		Sampled	REPORT A	Organic Matter %
CL/1910777	BH4 1.20-1.65	D	D	D
CL/1910778	TP02 0.30	D	D	D
CL/1910779	BH5 2.90-3.35	D	D	D
CL/1910780	BH2 0.60	D	D	D

Note: We will endeavour to prioritise samples to complete analysis within holding time; however any delay could result in samples becoming deviant whilst being processed in the laboratory.

If sampling dates are missing or matrices unclassified then results will not be ISO 17025 accredited. Please contact us as soon as possible to provide missing information in order to reinstate accreditation.

Deviating Sample Key	
A	The sample was received in an inappropriate container for this analysis
B	The sample was received without the correct preservation for this analysis
C	Headspace present in the sample container
D	The sampling date was not supplied so holding time may be compromised - applicable to all analysis
E	Sample processing did not commence within the appropriate holding time
F	Sample processing did not commence within the appropriate handling time

Requested Analysis Key	
	Analysis Required
	Analysis dependant upon trigger result - **Note: due date may be affected if triggered**
	No analysis scheduled
^	Analysis Subcontracted - **Note: due date may vary**

Where individual results are flagged see report notes for status.

 The integrity of data for samples/analysis that have been categorised as Deviating may be compromised. Data may not be representative of the sample at the time of sampling.

Method Descriptions

Matrix	MethodID	Analysis Basis	Method Description
Soil	ORGMAT	Oven Dried @ < 35°C	Acid Dichromate oxidation of the sample followed by colorimetric analysis of the extract

Where individual results are flagged see report notes for status.

Report Notes

Generic Notes

Soil/Solid Analysis

Unless stated otherwise,
- Results expressed as mg/kg have been calculated on the basis indicated in the Method Description table.
  All results on MCERTS reports are reported on a 105ºC dry weight basis with the exception of pH and conductivity.
- Sulphate analysis not conducted in accordance with BS1377
- Water Soluble Sulphate is on a 2:1 water:soil extract

Waters Analysis

Unless stated otherwise results are expressed as mg/l

Nil: Where "Nil" has been entered against Total Alkalinity or Total Acidity this indicates that a measurement was not required due to the inherent pH of the sample.

Oil analysis specific

Unless stated otherwise,
- Results are expressed as mg/kg
- SG is expressed as g/cm^3@ 15^{o}C

Gas (Tedlar bag) Analysis

Unless stated otherwise, results are expressed as ug/l

Asbestos Analysis

CH Denotes Chrysotile **TR** Denotes Tremolite
CR Denotes Crocidolite **AC** Denotes Actinolite
AM Denotes Amosite **AN** Denotes Anthophylite
NAIIS No Asbestos Identified in Sample
NADIS No Asbestos Detected In Sample

Symbol Reference

^ Sub-contracted analysis.
$$ Unable to analyse due to the nature of the sample
¶ Samples submitted for this analyte were not preserved on site in accordance with laboratory protocols. This may have resulted in deterioration of the sample(s) during transit to the laboratory. Note: We will endeavour to prioritise samples to complete analysis within holding time; however any delay could result in samples becoming deviant whilst being processed in the laboratory.

If sampling dates are missing or matrices unclassified then results will not be ISO 17025 accredited. Please contact us as soon as possible to provide missing information in order to reinstate accreditation.

Deviating Sample Key	
A	The sample was received in an inappropriate container for this analysis
B	The sample was received without the correct preservation for this analysis
C	Headspace present in the sample container
D	The sampling date was not supplied so holding time may be compromised - applicable to all analysis
E	Sample processing did not commence within the appropriate holding time
F	Sample processing did not commence within the appropriate handling time

Requested Analysis Key	
	Analysis Required
	Analysis dependant upon trigger result - **Note: due date may be affected if triggered**
	No analysis scheduled
^	Analysis Subcontracted - **Note: due date may vary**

Where individual results are flagged see report notes for status.

 The integrity of data for samples/analysis that have been categorised as Deviating may be compromised. Data may not be representative of the sample at the time of sampling.

Method Descriptions

Matrix	MethodID	Analysis Basis	Method Description
Soil	ICPACIDS	Oven Dried @ < 35°C	Determination of Total Sulphate in soil samples by Hydrochloric Acid extraction followed by ICPOES detection
Soil	ICPWSS	Oven Dried @ < 35°C	Determination of Water Soluble Sulphate in soil samples by water extraction followed by ICPOES detection
Soil	ORGMAT	Oven Dried @ < 35°C	Acid Dichromate oxidation of the sample followed by colorimetric analysis of the extract
Soil	TSBRE1	Oven Dried @ < 35°C	Determination of Total Carbon and/or Total Sulphur in solid samples by high temperature combustion/infrared detection
Soil	WSLM50	Oven Dried @ < 35°C	Determination of pH of 2.5:1 deionised water to soil extracts using pH probe.

Where individual results are flagged see report notes for status.

Report Notes

Generic Notes

Soil/Solid Analysis

Unless stated otherwise,
- Results expressed as mg/kg have been calculated on the basis indicated in the Method Description table.
  All results on MCERTS reports are reported on a 105ºC dry weight basis with the exception of pH and conductivity.
- Sulphate analysis not conducted in accordance with BS1377
- Water Soluble Sulphate is on a 2:1 water:soil extract

Waters Analysis

Unless stated otherwise results are expressed as mg/l

Nil: Where "Nil" has been entered against Total Alkalinity or Total Acidity this indicates that a measurement was not required due to the inherent pH of the sample.

Oil analysis specific

Unless stated otherwise,
- Results are expressed as mg/kg
- SG is expressed as g/cm^3@ 15^{o}C

Gas (Tedlar bag) Analysis

Unless stated otherwise, results are expressed as ug/l

Asbestos Analysis

CH Denotes Chrysotile **TR** Denotes Tremolite
CR Denotes Crocidolite **AC** Denotes Actinolite
AM Denotes Amosite **AN** Denotes Anthophylite
NAIIS No Asbestos Identified in Sample
NADIS No Asbestos Detected In Sample

^ Sub-contracted analysis.
$$ Unable to analyse due to the nature of the sample
¶ Samples submitted for this analyte were not preserved on site in accordance with laboratory protocols. This may have resulted in deterioration of the sample(s) during transit to the laboratory. Consequently the reported data may not represent the concentration of the target analyte present in the sample at the time of sampling
¥ Results for guidance only due to possible interference
& Blank corrected result
I.S Insufficient sample to complete requested analysis
I.S(g) Insufficient sample to re-analyse, results for guidance only
Intf Unable to analyse due to interferences
N.D Not determined **N.Det** Not detected
N.F No Flow
NS Information Not Supplied
Req Analysis requested, see attached sheets for results
Þ Raised detection limit due to nature of the sample
***** All accreditation has been removed by the laboratory for this result
‡ MCERTS accreditation has been removed for this result
§ accreditation has been removed for this result as it is a non-accredited matrix

Note: The Laboratory may only claim that data is accredited when all of the requirements of our Quality System have been met. Where these requirements have not been met the laboratory may elect to include the data in its final report and remove the accreditation from individual data items if it believes that the validity of the data has not been affected. If further details are required of the circumstances which have led to the removal of accreditation then please do not hesitate to contact the laboratory.

Note:

Asbestos Screen analysis is carried out in accordance with our documented in-house methods PM042 and TM065 and HSG 248 by Stereo and Polarised Light Microscopy using Dispersion Staining Techniques and is covered by our UKAS accreditation. Detailed Gravimetric Quantification and PCOM Fibre Analysis is carried out in accordance with our documented in-house methods PM042 and TM131 and HSG 248 using Stereo and Polarised Light Microscopy and Phase Contrast Optical Microscopy (PCOM). Samples are retained for not less than 6 months from the date of analysis unless specifically requested.

Opinions, including ACM type and Asbestos level, lie outside the scope of our UKAS accreditation.

Where the sample is not taken by a Jones Environmental Laboratory consultant, Jones Environmental Laboratory cannot be responsible for inaccurate or unrepresentative sampling.

Signed on behalf of Jones Environmental Laboratory:

Ryan Butterworth
Asbestos Team Leader

Matrix : Liquid

J E Job No.	Batch	Sample ID	Depth	J E Sample No.	Analysis	Reason

Please note that only samples that are deviating are mentioned in this report. If no samples are listed it is because none were deviating.

Only analyses which are accredited are recorded as deviating if set criteria are not met.

NOTES TO ACCOMPANY ALL SCHEDULES AND REPORTS

JE Job No.: 18/7222 18/5333 18/5166 18/5455 18/5775 18/5384

SOILS

Please note we are only MCERTS accredited (UK soils only) for sand, loam and clay and any other matrix is outside our scope of accreditation.

Where an MCERTS report has been requested, you will be notified within 48 hours of any samples that have been identified as being outside our MCERTS scope. As validation has been performed on clay, sand and loam, only samples that are predominantly these matrices, or combinations of them will be within our MCERTS scope. If samples are not one of a combination of the above matrices they will not be marked as MCERTS accredited.

It is assumed that you have taken representative samples on site and require analysis on a representative subsample. Stones will generally be included unless we are requested to remove them.

All samples will be discarded one month after the date of reporting, unless we are instructed to the contrary.

If you have not already done so, please send us a purchase order if this is required by your company.

Where appropriate please make sure that our detection limits are suitable for your needs, if they are not, please notify us immediately.

All analysis is reported on a dry weight basis unless stated otherwise. Results are not surrogate corrected. Samples are dried at 35°C ±5°C unless otherwise stated. Moisture content for CEN Leachate tests are dried at 105°C ±5°C.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

Where a CEN 10:1 ZERO Headspace VOC test has been carried out, a 10:1 ratio of water to wet (as received) soil has been used.

% Asbestos in Asbestos Containing Materials (ACMs) is determined by reference to HSG 264 The Survey Guide - Appendix 2 : ACMs in buildings listed in order of ease of fibre release.

Negative Neutralization Potential (NP) values are obtained when the volume of NaOH (0.1N) titrated (pH 8.3) is greater than the volume of HCl (1N) to reduce the pH of the sample to 2.0 - 2.5. Any negative NP values are corrected to 0.

The calculation of Pyrite content assumes that all oxidisable sulphides present in the sample are pyrite. This may not be the case. The calculation may be an overesitimate when other sulphides such as Barite (Barium Sulphate) are present.

WATERS

Please note we are not a UK Drinking Water Inspectorate (DWI) Approved Laboratory .

ISO17025 accreditation applies to surface water and groundwater and usually one other matrix which is analysis specific, any other liquids are outside our scope of accreditation.

As surface waters require different sample preparation to groundwaters the laboratory must be informed of the water type when submitting samples.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

DEVIATING SAMPLES

Samples must be received in a condition appropriate to the requested analyses. All samples should be submitted to the laboratory in suitable containers with sufficient ice packs to sustain an appropriate temperature for the requested analysis. If this is not the case you will be informed and any test results that may be compromised highlighted on your deviating samples report.

SURROGATES

Surrogate compounds are added during the preparation process to monitor recovery of analytes. However low recovery in soils is often due to peat, clay or other organic rich matrices. For waters this can be due to oxidants, surfactants, organic rich sediments or remediation fluids. Acceptable limits for most organic methods are 70 - 130% and for VOCs are 50 - 150%. When surrogate recoveries are outside the performance criteria but the associated AQC passes this is assumed to be due to matrix effect. Results are not surrogate corrected.

DILUTIONS

A dilution suffix indicates a dilution has been performed and the reported result takes this into account. No further calculation is required.

BLANKS

Where analytes have been found in the blank, the sample will be treated in accordance with our laboratory procedure for dealing with contaminated blanks.

NOTE

Data is only reported if the laboratory is confident that the data is a true reflection of the samples analysed. Data is only reported as accredited when all the requirements of our Quality System have been met. In certain circumstances where all the requirements of the Quality System have not been met, for instance if the associated AQC has failed, the reason is fully investigated and documented. The sample data is then evaluated alongside the other quality control checks performed during analysis to determine its suitability. Following this evaluation, provided the sample results have not been effected, the data is reported but accreditation is removed. It is a UKAS requirement for data not reported as accredited to be considered indicative only, but this does not mean the data is not valid.
Where possible, and if requested, samples will be re-extracted and a revised report issued with accredited results. Please do not hesitate to contact the laboratory if further details are required of the circumstances which have led to the removal of accreditation.

REPORTS FROM THE SOUTH AFRICA LABORATORY

Any method number not prefixed with SA has been undertaken in our UK laboratory unless reported as subcontracted.

ABBREVIATIONS and ACRONYMS USED

#	ISO17025 (UKAS Ref No. 4225) accredited - UK.
SA	ISO17025 (SANAS Ref No.T0729) accredited - South Africa.
B	Indicates analyte found in associated method blank.
DR	Dilution required.
M	MCERTS accredited.
NA	Not applicable
NAD	No Asbestos Detected.
ND	None Detected (usually refers to VOC and/SVOC TICs).
NDP	No Determination Possible
SS	Calibrated against a single substance
SV	Surrogate recovery outside performance criteria. This may be due to a matrix effect.
W	Results expressed on as received basis.
+	AQC failure, accreditation has been removed from this result, if appropriate, see 'Note' on previous page.
++	Result outside calibration range, results should be considered as indicative only and are not accredited.
*	Analysis subcontracted to an Exova Jones Environmental approved laboratory.
AD	Samples are dried at 35°C ±5°C
CO	Suspected carry over
LOD/LOR	Limit of Detection (Limit of Reporting) in line with ISO 17025 and MCERTS
ME	Matrix Effect
NFD	No Fibres Detected
BS	AQC Sample
LB	Blank Sample
N	Client Sample
TB	Trip Blank Sample
OC	Outside Calibration Range
AA	x2 Dilution
AB	x10 Dilution

Modified US EPA methods 325.2 (Chloride), 375.4 (Sulphate), 365.2 (o-Phosphate), 353.1 (TON), 354.1 (Nitrite), 350.1 (NH4+), 7196A (Hex Cr)	PM20	Extraction of dried and ground or as received samples with deionised water in a 2:1 water to solid ratio using a reciprocal shaker for all analytes except hexavalent chromium. Extraction of as received sample using 10:1 ratio of 0.2M sodium hydroxide to soil for hexavalent chromium using a reciprocal shaker.	Yes		AR	Yes
TM38	Soluble Ion analysis using Discrete Analyser. Modified US EPA methods 325.2 (Chloride), 375.4 (Sulphate), 365.2 (o-Phosphate), 353.1 (TON), 354.1 (Nitrite), 350.1 (NH4+), 7196A (Hex Cr)	PM60	As received solid samples are extracted with deionised water in a 2:1 ratio of water to solid.			AR	Yes
TM48	Determination of Ferrous Iron by reaction with Sodium Carbonate and Morfamquat Sulphate which is analysed spectrophotometrically.	PM0	No preparation is required.				
TM50	Acid soluble sulphate (Total Sulphate) analysed by ICP-OES	PM29	Dried and ground solid sample is boiled with dilute hydrochloric acid, the resulting liquor is then analysed.	Yes	Yes	AD	Yes
TM50	Acid soluble sulphate (Total Sulphate) analysed by ICP-OES	PM29	Dried and ground solid sample is boiled with dilute hydrochloric acid, the resulting liquor is then analysed.			AR	Yes

JE Job No: 18/7222 18/5333 18/5166 18/5455 18/5775 18/5384

Test Method No.	Description	Prep Method No. (if appropriate)	Description	ISO 17025 (UKAS/SANAS)	MCERTS (UK soils only)	Analysis done on As Received (AR) or Dried (AD)	Reported on dry weight basis
TM60	TC/TOC analysis of Waters by High Temperature Combustion followed by NDIR detection. Based on the following modified standard methods: USEPA 9060, APHA Standard Methods for Examination of Water and Wastewater 5310B, ASTM D 7573, and USEPA 415.1.	PM0	No preparation is required.	Yes			
TM65	Asbestos Bulk Identification method based on HSG 248.	PM42	Solid samples undergo a thorough visual inspection for asbestos fibres prior to asbestos identification using TM065.	Yes		AR	
TM73	Modified US EPA methods 150.1 and 9045D and BS1377:1990. Determination of pH by Metrohm automated probe analyser.	PM0	No preparation is required.	Yes			
TM73	Modified US EPA methods 150.1 and 9045D and BS1377:1990. Determination of pH by Metrohm automated probe analyser.	PM11	Extraction of as received solid samples using one part solid to 2.5 parts deionised water.	Yes	Yes	AR	No
TM74	Analysis of water soluble boron (20:1 extract) by ICP-OES.	PM32	Hot water soluble boron is extracted from dried and ground samples using a 20:1 ratio.	Yes	Yes	AD	Yes
TM74	Analysis of water soluble boron (20:1 extract) by ICP-OES.	PM61	As received solid samples are extracted with hot water in a 20:1 ratio of water to soil ready for analysis by ICP.			AR	Yes
TM75	Modified US EPA method 310.1. Determination of Alkalinity by Metrohm automated titration analyser.	PM0	No preparation is required.	Yes			
TM107	Determination of Sulphide/Thiocyanate by Skalar Continuous Flow Analyser	PM119	As received solid samples are extracted with 1M NaOH by orbital shaker for Sulphide and Thiocyanate analysis.			AR	Yes
TM131	Quantification of Asbestos Fibres and ACM, based on HSG248 and SCA method.	PM42	Solid samples undergo a thorough visual inspection for asbestos fibres prior to asbestos identification using TM065.	Yes		AR	Yes
TM173	Analysis of fluoride by ISE (Ion Selective Electrode) using modified ISE method 340.2	PM20	Extraction of dried and ground or as received samples with deionised water in a 2:1 water to solid ratio using a reciprocal shaker for all analytes except hexavalent chromium. Extraction of as received sample using 10:1 ratio of 0.2M sodium hydroxide to soil for hexavalent chromium using a reciprocal shaker.			AR	Yes

BH06	1017	0	0	0.1	0.1	20.6	20.9	0	0

Note:

Pressure in the morning 1011, peaking at 1017 with the last recording of 1016 taken at the end of the day.

Measurements taken from top of well casing.

Well BH04 and 06 were too deep for the interface probe (30m)

Gas readings for BH03 absent due to gas tap being off

Gas tap dropped down well side of WS08

Water samples from WS06 were very silty and the hole began to run dry during sampling

WS07 ran dry before sampling could take palce

Duplicate water sample of BH03 collected

Appendix F – Risk Assessment Principles

CSM Risk Assessment Principles

Current good practice recommends that the determination of hazards due to contaminated land is based on the principle of risk assessment, as outlined in the Environment Agency (EA) guidance on Model Procedures for the Management of Land Contamination (CLR 11). For a risk to be present, there must be a viable pollutant linkage; i.e. a mechanism whereby a source of contamination impacts on a sensitive receptor via a pathway.

Using criteria broadly based on those presented in the EA, Chartered Institute of Environmental Health (CIEH) and National House Building Council (NHBC) R&D Publication 66: 'Guidance for the Safe Development of Housing on Land Affected by Contamination' (2008), the magnitude of the risk associated with potential contamination at the site has been assessed. To do this an estimate is made of:

- The magnitude of the potential consequence (i.e. severity); and
- The magnitude of probability (i.e. likelihood).

The severity of the risk is classified according to the criteria in **Table A**, below:

Table A: Severity of Potential Pollutant Linkages

SEVERITY	EXAMPLES
Major	- Acute damage to human health, likely to result in significant harm. - Catastrophic damage to buildings/property (e.g. by explosion, sites with high gassing potential, extensive VOC contamination). - Major pollution of controlled waters (e.g. surface watercourses or Principal aquifers/source protection zones). - Significant and lasting damage to sensitive ecosystems or species.
Moderate	- Chronic (long-term) risk to human health likely to result in a reduced quality of life. - Significant and costly damage to property, buildings, structures or services. - Pollution of sensitive controlled waters (e.g. surface watercourses or Principal/ Secondary aquifers). - Damage to sensitive ecosystems or species.
Minor	- Non-permanent human health effects. - Moderate damage to buildings structures or services. - Pollution of non-sensitive waters (e.g. smaller surface watercourses or non-aquifers). - Damage to non-sensitive ecosystems or species.
Minimal	- Temporary discomfort. - Minor (easily repairable) damage to buildings, structures or services. - Short-term decrease in non-sensitive waters quality. - Temporary disturbance of non-sensitive ecosystems.

The probability of the risk occurring is classified according to the criteria in **Table B**, below:

Table B: Likelihood of Risk Occurrence

LIKELIHOOD	EXPLANATION
Highly Likely	- Contaminant linkage may be present that appears very likely in the short-term and risk is almost certain to occur in the long term, or there is evidence of harm to the receptor.
Likely	- Contaminant linkage may be present, and it is probable that the risk will occur over the long term.
Possible	- Contaminant linkage may be present and there is a possibility of the risk occurring, although there is no certainty that it will.
Unlikely	- Contaminant linkage may be present but the circumstances under which harm could occur are improbable.

An overall evaluation of the magnitude of the risk is gained from a comparison of the severity and probability, as shown in **Table C**, below:

Table C: Risk Based on Comparison of Likelihood and Severity

		SEVERITY			
LIKELIHOOD		MAJOR	MODERATE	MINOR	MINIMAL
	HIGHLY LIKELY	Very High	High	Considerable	Medium
	LIKELY	High	Considerable	Medium	Low
	POSSIBLE	Considerable	Medium	Low	Very Low
	UNLIKELY	Medium	Low	Very Low	Negligible
