Hi

I wish to object to the changes proposed by Sunnica now that the original plan to build the plant next to existing nation grid station at Burwell cannot go ahead

Firstly this must throw into doubt all calculations that have been made originally

2. Rushing it through in what looks like a panic process will not give sufficient time for all effected parties to analyse the impact

3. Will this now throw into doubt the viability of the whole project

4. Should the site of the battery plant and land towards Isleham be reconsidered as well

Finally

This seems to be rushed through on a timescale just to satisfy political pressure for the urgent requirement of "green energy"

if granted would potentially push through poorly thought through changes without proper consultation and assessment

Please consider the use of good agricultural farmland the will be lost to food production for generations to come

Kind regards

Michael & Dorothy Spooner
