---

To whom it may concern

I am writing to you today in response to the proposed delay to the Sunnica Solar Power Station project, which I understand is currently in the early stages of planning. I understand that Sunnica has requested some changes to their plans and asked for a relatively swift turn around in terms of local responses (July 2022). I am very concerned that this change requires significant thought and consultation and frankly July is mere weeks away. I live in Chippenham and as such ma profoundly concerned about not only the scale of this monstrous solar power station but also at the appalling lack of clarity, care, detail or consideration from the people at Sunnica, for the impact of such an industrial blight on our community. I will be travelling on business during much of June and as such will not have the capacity to properly review the proposed changes nor consult with neighbours and local action groups to better understand the full implications. I think it is shoddy to schedule such a significant project change during a period of time when a large number of people will be away for the holiday season and as such I am in favour of delaying the preliminary meeting until after the summer break.

Many thanks

Sean Newell
