Dear sirs,

I wish to object to the request made by sunnica to delay in starting planning proceedings.

The changes proposed simply confirms my view that the whole process of completeness of the application has been inadequate and not thought through.

Throughout the process so far, the applicant has failed to provide fully worked out plans in its application.

The concerns raised by residents have not been addressed. They simply indicate that they will be resolved in the future e.g. the lack of information regarding how any fire at the battery storage facility would be addressed. I have no confidence that sunnica have or will address such concerns.

This latest request to delay for a few months so they can discuss feasibility options with the national grid, simply confirms my view that the application submitted is not fully complete and poorly thought through.

In my opinion, the planning process should be **halted** not simply delayed.

This is especially important on such a large scale infrastructure project.

Regards
Anthony Bowser
