Written submissions about how the application should be examined

Submission ID: 10528

I would like to make a written representation in the process, which currently has a deadline of 30 August. Sunnica are changing their submission after not properly researching connection to the National Grid in their original submission. Given that the scheme is not properly defined and it looks like the work associated with the new modification does not address the safety implications of the proposed changes, this leaves very little time to assess Sunnica's proposals before the deadline which now coincides with the holiday season. I suggest that in order to allow interested and affected parties to make proper representations into the process, it would be fairer if this deadline were extended to mid-September.
