

The Sunnica proposal is objectionable for many reasons.

The loss of useable working farmland is unacceptable. This is and has been an area for food growing for a long time. Food security is an undisputed issue.

The scale of the proposal means the integrity of this rural area will be destroyed. The impact will change the landscape to a industrial place.

The safety of the battery stores is not proven or guaranteed. The risk and danger of fire is known. With the droughts that have been experienced in this part of the country - the rate of spread of any fire is tremendous.

The plan for decommissioning of the farm is vague and not acceptable. The landscape will be left with a mountain of defunct industrial technology.

The claim of the scheme being carbon neutral is questionable.
