Absolutely all for renewable energy, however i still have very big Health & safety concerns regarding the scale of this project and the proximity to citizens and of the toxic gases this will cause if there was an explosion or fire. It's in too close proximity to our schools and residence. Whats the evacuation procedure?.

It will take away highly valuable farm land needed for production of foods.

With the recent rises in gas and electricity it is a real concern. So why are we not putting up more wind farms?. The steep cost of foods recently is all the more reason why we should keep our valuable farm land. This would have a huge Environmental impact if we had to import foods. Additional traffic and contractors causing obstruction to surrounding villages Big environmental concerns at time of decommissioning. Where and how will solar panels and batteries be recycled or disposed of?. The large scale of the project. It will be one of the largest solar panel sites in Europe and it will be placed in a wonderful historical rural land full of wildlife and nature. Why can solar not be placed on commercial property such as industrial estates, supermarkets, airports and also compulsory on new build houses?. Archeological impact.â€•.
