

I am wholly against the Sunnica application, from the very beginning the whole process by the applicant was been mishandled.

Prime farmland which is producing food for the growing local and national population is being used for this development, local villages will heavily affected by the construction for years, our roads are classed as B roads and sure not suitable for HGV's in the numbers claimed to be needed during construction.

Our villages will be surrounded and wildlife will be misplaced from the land, the beautiful views will disappear and ugly battery storage units will be seen.

The applicant has failed to give any reassurance regarding the safety of the batteries and how any problems or fires will be responded to, no consideration has been given to any potential fires and the effect of any toxic substances given off and how it will impact animal and human life.

From what I have witnessed and heard from Sunnica I feel that the plans are rushed and not properly thought out, locals have not been given enough chance to challenge the applicant at local meeting as they were held via zoom and many elderly residents are not tech savvy.

I feel strongly that the size of the site proposed is not suitable for this area and should be rejected.
