Dear Mr Kean,

Say No To Sunnica Action Group Ltd (IP ID 20031080) notes difficulty with establishing basic facts about the proposals. These are spread across multiple documents, or in some cases do not exist. This not only has potential to create needless disagreement over the facts, it hinders the preparation of evidence and response to documents. We further note that we believe that the Examining Authority would benefit from a single document establishing basic facts that are not in dispute between the parties.

We therefore request that the ExA asks the Applicant to prepare a summary document of key facts which could then, once validated, be included in Statements of Common Ground. We suggest that these should include as a minimum the total area within the order limits, the area of each Work, the maximum operational area of solar PV, the maximum area of each BESS compound, the length of the grid connection cable including interconnectors between substations, total area of ecological mitigation and the like. It may be that this information exists within the application, we are asking that it be brought together into a single document for the assistance of all parties.

Best Regards

For and on Behalf of Say No To Sunnica
