Subject: OFH1 Sunnica Industrial Power Station

Dear Sir/Madam,

Interested Party reference number: [REDACTED]

[REDACTED] I have just managed to view the video of the OFH1 meeting and felt the need to respond.

The applicant did a sterling job trying to respond to the points made by the public and councillors, however having listened to the points raised I feel its time to end this application now.

The applicant constantly fails to even outline the scheme properly. Nowhere has the applicant committed the numbers for the volume of panels, number of Shipping containers, number of batteries, etc and has given many "details" that are unrealistic. Such things as completing the construction in two years are simply unbelievable to anyone who has been involved with major projects of this size.

The points raised particularly by the councillors who have professional knowledge, experience and duty of care and professionalism are, in my view, sufficient to stop this application in its tracks. There is an enormous amount of money, time, heartache, and effort being expended on an inappropriate scheme. Most people are in favour of green energy production that is properly planned and implemented in appropriate areas; no one (except the proposer) spoke up for the scheme at this meeting. Indeed there were doubts expressed about the green credentials of the scheme as well. I also doubt that the land will ever be returned to agriculture as the need for power will only increase and already the applicant has stated publicly that underground infrastructure will never be removed.

There are many points that could be made at the meeting but the limited times allowed of 5 or 10 minutes were far too short to explore just one of the subjects.

I know that you are required to follow the requirements of the legislation but please also apply real world intelligence and save us all from this potential fiasco of waste and threat of ruining our country one scheme at a time. There was a debate in the House of Commons (land use strategy) (Large Solar) that you should have as evidence and you should also call the two local MP's to give evidence who are both against the scheme as proposed.

Stop Sunnica now please.

Best Regards
Nick Harvey
