

Anglian Water has contacted Sunnica to request a further addition to the Statement of Common ground. This relates to a request to enter an agreement, that 24/7 access to the water treatment site from Broads Road will be maintained at all times.Â

Whilst the proposed scheme does not directly impact Anglian Water's freehold title, the public highway which is used to access their site is likely to become more intensively used when installing the cables. This road appears to be only a single lane and also accessible from the south only. As a statutory undertaker, it is essential that Anglian Water have access to their site 24 hours a day, in the case of an emergency. Therefore, Anglian Water requires certainty that Sunnica will maintain access to the water treatment works during construction or through any further maintenance period.
