Hello

My comments are as follows;

Soil grade - the soil in this area is of high grade agricultural land. It is at least grade 2. This area has always provided excellent land for vegetable growing it should not be converted to industrial land.

It is not correct that the applicant;
- on Sunnica's soil assessments/ ALC. Does their assessment of the land as being 'over 96% poor quality soil'

This project should not be granted so to preserve this lush arable vegetable farming area.

Thank you for listening

Emma
