In response to this application to cover hundreds of acres of farmland with panels and unsafe batteries I again submit my objection.
Since this scheme was originally instigated the land is still producing acres of wheat and barley, in other words, food. Corn which since the Ukraine war is even more important. Russia has now blocked the release of the Ukrainian harvest.
We need these acres more now. It is vital that we keep producing food. Wind can produce electricity, it cannot provide what land can - food.
I would be obliged if you will take this basic fact into consideration.
Thank you
Evelyn Graham
