---

I have written in at several stages of this development application and would just iterate my previous comments:-

1. This development is on a massive scale and it will industrialise some lovely countryside.
2. I am a supporter of solar power and have even had my own solar panels on my home since 2011. I have urged government and my MP Lucy Frazer to require new build commercial and domestic buildings to have panels but to date no decisions have been made
3. There are several large farms around Burwell already all connecting to the Burwell National Grid Substation-- so I feel we have lost a lot of our land already
4. The area produces good crops of wheat, barley, potatoes, sugar beet and food security and home production is valuable.
5. In the USA the president has ordered massive areas of barren land to develop solar farms and has grant funded this. I ask why should we cover our lovely countryside with even more farms -we have done a fair bit?
6. My family walk often on the footpaths close to these sites and all this will be a lesser experience.

In conclusion I hope this massive project should not go ahead

Robert Dorman, C.Eng, MICE
