Sir, I would like to query who the ergonomist was and what fields he did tests on to come up with that our farmers fields can't grow crops on because they have such poor soil.

I have lived in Isleham village for [REDACTED] years and there have always been cereal crops - potatoes - carrots - onions - beet - maize (which they don't grow here now). the villagers who have lived here all their lives say this has always been so.

We have for the last few months watched all these cereals being harvested all round Isleham. These fields are now manured and ready for the next crops to be sown. The potatoes carrots and onions are being dug up now. The beet will follow later.

All this food our farmers grow we need to eat to live.
Foreign foods are so pricey . I personally go to farmers markets and buy from the farmers road side stalls. I know where it comes from and it stores a far sight longer.

Isleham villagers myself included want to continue seeing our own foods growing in the fields

NOT FIELDS OF BLACK SOLAR PANELS.

These panels will have a detrimental effect on our wildlife, birds , animals, mammals and bats of which we have a great variety and which we enjoy so much and we can watch from very close quarters .

Thanking you for your time to read this .

Please leave our village and the surrounding ones to there natural states.

Mrs Jeanne Winter .
