It is not possible to hide the impacts of a development of this size and scale. Industrialising rural settings and blighting rural communities with these monstrosities is not acceptable .

Solar should be on rooftops. We should not be using agricultural land for inefficient solar.

8ft high fences for miles and miles and 5 m high security cameras. No. It just beggars belief that the U.K. would use our finite land for something that will not produce the energy we need in the cold winter months.

It is not a good design nor can It ever be , sitting in rural communities of this size and scale! Just horrendous!

We should not be using our finite connections to the grid either. They should be kept for the renewables that will provide energy when we need it. For example nuclear and wind.

Where is our land use frame work? Where is our rooftop solar initiative?

We should not impose this on the rural communities.
