

Submission ID: 13201

Please consider the more acceptable alternative grid connection point at Walpole. National Grid ESO should be asked to explain why this alternative was not offered and Equinor should be asked to explain why, in view of its professed concern for local communities and the environment, it did not push for the Walpole grid connection.

The cumulative impacts of SEP and DEP on local communities and the environment in conjunction with the Orsted Hornsea Three project and the Vattenfall Vanguard and Boreas projects must be examined.

Finally the consequential impact of SEP and DEP on the need for the National Grid East Anglia GREEN project must be considered.
