

Submission ID: 15292

We strongly object to the Medworth facility.

This is on health, environmental and safety grounds.

Our employees live in Wisbech and work on the Weasenham Lane Estate very near the proposed incinerator.

All of my staff are worried by the proposal.

Our health, together everybody else in the vicinity, will be effected by the massive extra volume of movements to even build the place let alone if it ever got built.

These massive number of extra vehicle movements will definitely contribute to more accidents and incidents.

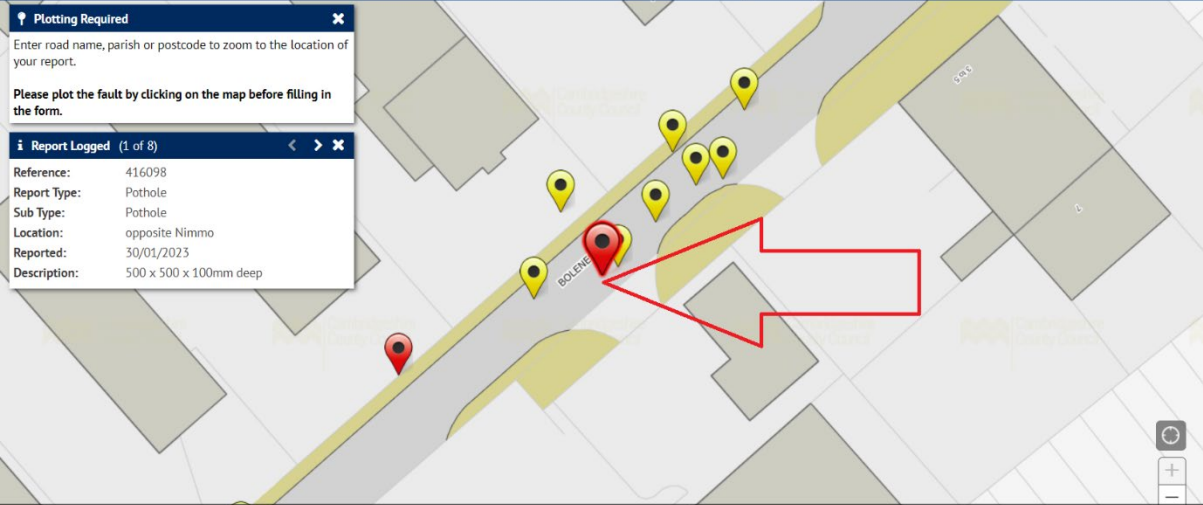

Weasenham Lane is already regularly completely closed for road sinkholes over the years.

The proposed route on from that of Algores Way for construction is already a disgustingly bad road with many potholes and poor surfacing. People already swerve down the road. Boleness Road will also get used and this is in even worse condition. In fact our business has a claim in against the council for 2 tyres destroyed by hitting a pothole right at this moment. (NCC Insurance Claim PL23 0592)

These types of facility should be away from school and housing areas, close to major multi-laned road such as the A1/A14 and not where roads already aren't of sufficient quality for existing traffic.

Plotting Required
Enter road name, parish or postcode to zoom to the location of your report.
Please plot the fault by clicking on the map before filling in the form.
