

We are owners of [REDACTED] directly opposite the proposed main access for the incinerator. Further to our previous representation regarding construction of acoustic fencing and electric gates to our property, we now query how future changes to our access would be accommodated. For example if we wished to widen or move our access would we be able to do so after acoustic fencing was installed. We also note the vehicle holding area and wonder how the required number of bays has been calculated. If this area wasn't adequate it could lead to a build up of waiting vehicles on the highway, causing disruption to other road users and restricting access to our property. We have concerns regarding traffic survey, specifically access to A47/ Elm High Road from A1101, approaching from the South. As regular users of this road we experience frequent delays at this roundabout and do not recognise the description given. We think further consideration should be given to an up to date survey.

Have the criteria attached to environmental surveys been met? We can confirm that inspections on our land at [REDACTED] have not taken place.
