Dear Mr Wheadon,

Ref: EN010110

I am replying to your letter dated 29<sup>th</sup> January 2024.

I am completely opposed to an incinerator being built and established in Wisbech. My Member of Parliament and the three councils for Wisbech, all who represent the people are also against this proposal. The town does not need it, and it was not asked for. Why would we when practically the whole town will be affected by it in various ways detrimentally? It seems that so much time, effort and money has been spent on this project mitigating the extensive negative issues that surround the incinerator. To think of how the town would benefit if it was a project that the people wanted, that would benefit us all and bring a smile to our faces. Instead, we have to think about all the waste that will be transported into Wisbech creating more vehicles on the roads, unpleasant smells, noise and air pollution.

With a project of this size, or even half the size, the incinerator will release emissions however miniscule into our precious air, lungs, fields, crops and waterways etcetera. The visual impact will be an eye-sore and house prices will be reduced.

This government has said that the biggest environmental threat to health in the UK is air pollution. If it does go ahead it actually means that the Clean Air Bill of 1956 has no meaning, nor will the word of the government.

We should be enhancing our lives whenever possible, and not reducing our living standards and polluting the town even more than before.

Yours sincerely,

Jean Jones
