## 1 INTRODUCTION

This annex provides tables of seabird density in each calendar month for each species recorded during baseline surveys for the Five Estuaries Offshore Windfarm project (VE). These have been derived from the 24 surveyed months over which data was collected (March 2019 – February 2021).

Monthly densities were estimated using design-based methods and are summarised as central estimate (i.e. extrapolated from the number seen in the surveyed area to the whole area) and 95% confidence range, derived from 1,000 nonparametric bootstrap samples. The monthly values were obtained as the average of the two calendar months available (see Volume 6, Part 5, Annex 4.5 for the densities from each individual survey).
