Caroline

Below is the text from section 6 and 7 you have requested to go with the video I sent regarding noise.

Video 1: Noise emanating from Flixborough Industrial Estate from EPR Glanford Power Station, Eighth Avenue on start up after shut down.

Purpose of video content: This video taken on 19<sup>th</sup> October 2022 at 20.48 highlights the noise that can be heard in Amcotts from EPR Glanford power station on Flixborough Industrial Estate after it had been shut down for approximately 16 days. The noise that can be heard is the start-up of the plant after it has been idle. It went on for nearly 2 hours. This was reported and logged with NLC (who confirmed they had contacted EPR Glanford and the source noise on the video did come from their location) and the Environment Agency. The power station continues to disturb the enjoyment of my home and garden on numerous occasions. Other noises that can be heard from this location can only be described like a steam engine chugging. This noise can go on for hours. I want this video to highlight what noise a small power station can make and how concerned I am about the noise a much larger scale project will make. Note the video has been trimmed to comply with data protection.

Thanks,

Amy-Louise Ogman
