

## Video Submission Proforma

File name: JHCmoatfieldCableNightingale.mp4

This is a very short video clip (in order to email) of a nightingale singing in the cable route between Moatfield Lane and Wilcocks Farm. It shows the habitat and depth of blackthorn scrub needed for these red list birds to breed. The sound of the nightingale singing is very distinctive and, as shown here, can be broad daylight in the months of April - June.

Please attach this to my written representation for deadline #1 on 28 Feb 2024.
