Drax Bioenergy with Carbon Capture and Storage Extension Development Consent Order Application

Dear Sirs

We have been in communication with Drax Power Limited (the Applicant) through various stages of the pre-application phase of their Development Consent Order and we are pleased to see the application submitted to and accepted by the Planning Inspectorate. We are aware that the development will require the receipt and transport of a number of pieces of very specialist equipment and infrastructure from the Port of Goole to the Power Station. Associated British Ports and the Port of Goole is well capable of assisting and supporting these key and complex parts of the development and we have a wealth of experience in dealing with large and specialist loads similar to those which Drax will be moving and utilising. The Port's infrastructure is specifically designed and capable of managing a number of these movements including adapting Port facilities where necessary to allow the movement of deliveries into and then out of the Port and onto a defined route. ABP and the Port of Goole looks forward to working with Drax to make their project a successful one which will likely have benefits across the region and the Humber.

Yours sincerely

Tom Jeynes, Sustainable Development Manager
