1. Introduction

- 1.1 RWE Renewables UK Dogger Bank South (West) Limited and RWE Renewables UK Dogger Bank South (East) Limited (hereafter 'RWE Renewables') are proposing to develop the Dogger Bank South (DBS) Offshore Wind Farms (hereafter 'the Projects'). The Projects are located more than 100 km off the northeast coast of England in the area of the North Sea known as Dogger Bank. The Projects comprise two separate sites, DBS East and DBS West. The Projects will include offshore and onshore infrastructure including export cables to **landfall** and a cable connection to the electricity transmission network.
- 1.2 RWE Renewables has appointed Royal HaskoningDHV as the lead Environmental Impact (EIA) coordinator and author of the Preliminary Environmental Information Report (PEIR) and Environmental Statement for the Projects (Royal HaskoningDHV 2023a; Document Number: 004153597). Royal HaskoningDHV is also providing environmental and consenting support services to RWE Renewables, including onshore archaeology and cultural heritage.
- 1.3 AOC Archaeology Group has been commissioned by RWE Renewables to undertake a programme of archaeological trial trenching within the proposed Onshore Development Area, the boundary within which all onshore infrastructure required for the Projects will be located (including landfall, cable route, accesses, construction compounds and substations) (see Figure 22-8-1). The programme of trial trenching is being undertaken in phases and in conjunction with an ongoing programme of geophysical survey within the Onshore Development Area (AOC Archaeology 2023a; Document Number: 004300131; AOC Archaeology 2024; Document Number: *pending*). The results of a geoarchaeological desk-based assessment have also informed the programme of works (AOC Archaeology 2023b; Document Number: 004300131)
- 1.4 Royal HaskoningDHV produced a Written Scheme of Investigation (WSI) for Archaeological Trial Trenching which details the overarching methodology for the onshore trenching and which has been approved by the Historic Environment Consultees for the Projects (Royal HaskoningDHV 2023b; Document Number: 004797542).
- 1.5 The scope of the Phase 1 trenching and a set of detailed trench plans were presented in a Technical Briefing Note which formed a supplement to the WSI and which was approved by the Historic Environment Consultees (Royal HaskoningDHV 2023c; Document Number: 004797542-05). The Phase 1 trenching comprised 59 trenches at the Landfall Area (Trenches 1-59, Figure 22-8-2) and 82 trenches at the proposed Substation Zone (Trenches 60-141; Figure 22-8-4A). The Landfall Area lies immediately to the north of Cliff Road, Skipsea, East Riding of Yorkshire (National Grid Reference: TA 17729, 55382), and the Substation Zone lies immediately to the north of Copleflat Lane, Bentley, East Riding of Yorkshire (National Grid Reference: TA 01992, 36447) (Figure 22-8-1).
- 1.6 The trenches were positioned to target potential buried archaeological assets identified through desk-based research, aerial imagery, geophysical survey and the results of the geoarchaeological desk-based assessment. A proportion of the trenches were also positioned to target archaeologically 'blank' areas where no archaeological data have previously been recorded.
- 1.7 During the course of the trenching persistent heavy rain led to concerns being raised by landowners about ground conditions and damage to land parcels. As such, and with the agreement of Humber Archaeology Partnership (HAP) (the archaeological advisor to East Riding of Yorkshire Council and one the Historic Environment Consultees), trenching at the substation site was postponed after the excavation of 49 trenches (Trenches 60-97, Trenches 108-112 and Trenches 115-119). Similar issues

affected the trenching at the landfall area and, given the worsening weather towards the end of the fieldwork programme, HAP agreed to a proposal to descope two trenches at this site to facilitate the completion of the works (Trenches 49 and 54). Descoped trenches were machined and were subject to pre-excavation survey and photography; however, no hand excavation, hand cleaning or recording of features was undertaken in these trenches.

2. Document Purpose

- 2.1 The purpose of this document is to provide an interim account of the significant archaeological results from the trenching completed during Phase 1. It comprises a brief narrative account of the significant archaeological features encountered at the Landfall Area and Substation Zone, tabulated data for each excavated trench showing features encountered, finds recovered and provisional dating (where known), a brief account of further work required to complete assessment and reporting, a quantification of the primary archive, and site and trench plans. Please note that the dating of archaeological features presented in this report is provisional and is subject to review pending the results of specialist reporting on the pottery, as well as a programme of radiocarbon dating.
- 2.2 A post-excavation assessment report for the Phase 1 trenching will be produced in due course which will contain a full methodology, the archaeological and historical background to the sites, stratigraphic narratives for each trench, a discussion placing the results of the trenching in a broader regional context, a full suite of site plans and sections, and finds and environmental assessment reports.

3. Summary Results

- 3.1 The following section presents an overview of the significant results from each site. Tables showing further details of the features encountered in each trench, the finds recovered from features and their provisional dating are presented in Appendix 1.

The Landfall Area

- 3.2 The site consists of gently undulating land across four fields, with several notable low points and rises. At modern ground level, heights ranged from 7.85m above Ordnance Datum (aOD) to 13.22m aOD. Heights recorded on the natural geology (as exposed within the trenches) ranged from 7.26m to 12.89m aOD.
- 3.3 In general, some level of archaeological activity was encountered across most parts of the landfall site, with notable concentrations of more significant activity suggestive of settlement in two key zones. The pattern of archaeological activity broadly followed the trends suggested by the geophysics, but all areas of the site generally had more archaeological features than were visible to the survey prior to excavation (Figure 22-8-2).
- 3.4 Several areas of the site, especially low points in the landscape, contained sequences of water lain deposits. Many were shallow and probably represent episodic flooding in seasonally wet areas of the site, while others were deeper or more complex and may represent palaeochannels or larger (and/or more permanent) pond features. Where they interacted with archaeological features, the ponds/palaeochannels were found to be truncated by the features and thus were of some antiquity. Three examples were sampled with monolith tins to interrogate the depositional sequence during post-excavation assessment and analysis. In particularly low-lying areas of the site, later deposits sealed archaeological features and were therefore of more recent date and likely colluvial or alluvial in character. These would have been caused by localised erosion of soils from higher to lower ground,

particularly during wetter periods, infilling hollows in the underlying geology. While the site was generally fairly level, there are instances of localised drops in height exceeding 1m from one end of a trench to the other (for example Trenches 5, 38, 39, 52 and 55), as well as trenches which lay in distinct hollows (for examples Trenches 24-26, Trench 33 and Trench 40). In such locations, deposits formed by water action have accumulated below the topsoil. The sealing deposits (where present) were typically truncated by plough furrows and sealed by the topsoil (a modern agricultural ploughsoil). Where colluvial/alluvial sealing layers were absent, the archaeological features were truncated by furrows and sealed directly by the topsoil. Generally, there was no consistent agricultural subsoil present below the modern ploughsoil.

Southeast corner of site: double-ditched trackway and settlement environs (probable Iron Age-Roman activity). Figures 22-8-3A–22-8-3B.

- 3.5 A clear geophysical trend in the southeast corner of the site suggested a double-ditched trackway was present in this area. Two large, parallel ditches were encountered in Trenches 4 and 5 in line with the geophysical anomalies, on a northwest-southeast alignment in this part of the site (Figure 22-8-3A). The ditches were generally large (over 1m deep and 2m wide), typically with smaller recuts suggesting a later phase of smaller-scale reuse along the same alignment. Ditches excavated in Trenches 7, 8, 9, 33 and 35 were all similar in character to those excavated in Trenches 4 and 5, and possibly formed part of the same feature across the landscape (Figure 22-8-3B). The ditches were slightly sinuous in plan overall and were aligned northwest-southeast where encountered in Trench 5, curving to run slightly more east-west towards the west (Trenches 4, 7, 8 and 9) and then becoming east-west aligned by Trenches 33 and 35. Both ditches were seen in Trenches 4, 5 and 8, while only one ditch of the pair was encountered in Trenches 7, 9, 33 and 35. In Trench 7, it is possible there was a break in the northern ditch, or it may have been masked by later activity in this trench, especially if its upper fills were sterile. In Trenches 9, 33 and 35, the trench positioning was such that they only intersected with one of the ditches (the parallel ditches are presumed to be beyond the trench limits at these points). In Trenches 8 and 9, the association of the ditches with the trackway ditches to the east can be made with relatively high confidence due to their proximity and similarity to those seen further east. The identification becomes more speculative further west but is based on the very similar character of these ditches as well as their position and alignment.
- 3.6 In Trenches 3, 4 and 5, the area immediately around the trackway ditches contained a significant concentration of archaeological features with a high incidence of finds, indicating that this part of the site is likely to be close to settlement activity which may extend into the site (Figure 22-8-3A). Trench 3 contained an extremely productive feature which consisted of a large linear ditch with multiple recuts. At the base of the ditch was an intact pottery vessel (of probable Iron Age/Romano-British date); the remaining fills of the feature and its recut contained hundreds of pottery sherds from various vessel types. The density of pottery suggests a dump of rubbish, indicating settlement activity in the immediate vicinity of this trench. A number of pits and ditches were also recorded in Trenches 4 and 5, including ditches running parallel to the trackway. There was a very broad pit at the southern end of Trench 5 which could represent a man-made pond (rather than a natural feature).
- 3.7 Moving west along the trackway ditches, the incidence of pottery and other cultural material declined, as did the presence of associated archaeological features. The productive northwest-southeast aligned ditch from Trench 3 was also not encountered c. 50m to the northwest in Trench 2 (although an undated parallel gully and a curvilinear gully in that trench indicate archaeological activity was still occurring in this area). An undated north-south aligned ditch in Trench 1 and an east-west aligned

ditch crossing Trenches 29 and 30, all to the south of the projected trackway route, indicate that archaeological features are still present (if less productive) in this area. Trench 34, situated to the north of the projected trackway route, contained a concentration of undated pits (including two containing burnt stone fills) which may be contemporary or unrelated activity.

- 3.8 It appears that concentrated settlement activity was confined to the southeast corner of the site, the trackway further west perhaps marking a route linking the settlement with field systems and potentially other settlements in the surrounding landscape. The possible trackway was traced westwards to Trench 35 but not beyond. However, west of this point, it could continue without crossing any of the evaluation trenches. The area along this linear trend, and to either side of it, can be considered likely to produce further evidence of Iron age/Roman field systems with possible associated activity.

Northeast corner and east edge of site: undated and Iron Age/Roman activity. Figure 22-8-3C.

- 3.9 A small number of features were encountered in the northwest corner of the site (Trenches 19 and 28) which had blackened fills containing fired stones, indicative of burning activity. In Trench 28 a pit containing burnt material was situated on a slope, and a depression immediately to its southeast had filled with a dark layer formed by runoff from the archaeological activity upslope. These features were undated in the field but the fills have good potential for radiocarbon dating due to their charcoal content. A ditch corresponding to an uncertain geophysical trend lay to the north of the pit in Trench 28; this feature yielded a small amount of handmade pottery (probably of Iron Age date).
- 3.10 Nearby, there were other isolated instances of undated archaeological activity. A north-south aligned ditch and two northwest-southeast aligned ditches were excavated in Trench 20 and there was a notable concentration of undated features in Trench 18 (at the far eastern edge of the site) consisting of several pits, a curvilinear gully and a large northeast-southwest aligned ditch. A further isolated ditch was excavated in Trench 15 on a northwest-southeast orientation. Ditches from these trenches extended into an area towards the eastern edge of the site which contained several archaeologically blank trenches (Trenches 10-13, 16 and 17). The presence of a number of archaeologically blank trenches in this zone suggests a lower density of archaeological activity in this part of the site, but linear features extending near or around the blank trenches indicates there is still some archaeological potential within this zone, albeit distant from any associated settlement activity.
- 3.11 Trench 6 contained one likely archaeological feature (a small pit or posthole) but there was a concentration of features at its eastern end which were filled with unusual blue clays and then sealed by a porous silty clay deposit. These were excavated and are interpreted as of probable geological origin. Similar deposits to the upper sealing layer were also investigated in Trenches 11, 12 and 15 and are interpreted as naturally deposited.
- 3.12 A small amount of post-medieval activity was also recorded in the east and southeast part of the site, an approximately north-south aligned boundary ditch and its recut being encountered in Trenches 3 and 14 (probably the same feature). An approximately north-south aligned post-medieval ditch and its recut were also seen partially in Trench 7 and may be part of the same boundary system.

North and northwest edge of site: undated and Iron Age/Roman activity. Figure 22-8-3D.

- 3.13 A concentration of ditches in the northwest corner of the site, some of which contained struck flints or handmade pottery, indicates a further zone of possible Iron Age activity. The most substantial ditches were ones crossing Trenches 55 and 56 (containing pottery) and one to the east which truncated a pond feature in Trench 25 (containing no finds). These were both on a northwest-southeast orientation.

A northeast-southwest aligned ditch in Trench 24 may form part of a contemporary field system on a perpendicular alignment; it contained fragmentary pottery. A pit situated close to the ditch in Trench 25, also truncating the pond sequence, may also represent contemporary activity.

- 3.14 Further west, a ditch aligned approximately north-south crossed Trenches 58 and 59; this feature yielded no pottery but in Trench 58 it contained a fill containing quantities of burnt animal bone and charcoal. This trench also contained the terminus of a northeast-southwest aligned ditch which contained struck flints, indicating a possible prehistoric date. A curving feature excavated at the edge of Trench 57, whose full profile could not be seen, may represent part of a curvilinear ditch or a large pit. This feature yielded many sherds of handmade pottery of probable Iron Age date.

Northwest corner of site: medieval settlement zone. Figure 22-8-3E.

- 3.15 The highest concentration of archaeological features at the site lay close to its northwest corner where there was a cluster of highly productive medieval features located immediately to the south of an extant field boundary ditch. The archaeological features represent a medieval settlement over more than one phase of activity and consist of large boundary ditches, smaller ditches probably functioning as field or plot divisions, several curvilinear gullies and a posthole which may indicate structural remains, and pits of varying sizes. The quantity of finds in these trenches, particularly in Trenches 50 and 53, indicates that the activity is highly likely to have been within (rather than simply close to) settlement. The finds included pottery of mixed medieval fabrics, including several caches or concentrations in individual features. This was the most common finds type across the settlement, with smaller quantities of generally poorly preserved animal bone, some shell, and several iron or copper alloy objects. Small quantities of daub or fired clay were also present. The character of the finds appears to be domestic, with no obvious signs of industrial activity, and probably represents domestic waste discarded in features close to contemporary settlement.
- 3.16 This activity corresponds to an area of strong geophysical trends and the combination of the geophysical results and the trenching results suggests a rectilinear enclosure surrounding sub-divided land parcels. Ditches were generally slightly off east-west or north-south alignments, in line with the ridge and furrow trends in this part of the site. Documentary research undertaken by HAP suggests that this is highly likely to be the location of the 'lost' medieval hamlet of Cleeton (pers. comm. Richard Newman, Principal Archaeologist, HAP).
- 3.17 The very high density of features declined immediately to the north of Trenches 52 and 53, and comparable features were not visible in the de-scoped Trench 54. However, the de-scoped Trench 49 (to the south of Trench 50) appeared to contain several narrow ditches following comparable alignments which had dark fills resembling the medieval deposits in Trenches 50, 51, 52 and 53. Evidence for contemporary settlement activity was absent further south in Trenches 40-48, indicating that the geophysical survey correctly identified the densest concentration of activity in this location. The land to the south of the settlement (and indeed to the north and east) is likely to have been used for agriculture, as indicated by remnant furrows recorded across the site during the evaluation.

Central site (Trenches 37 and 38): undated archaeological features. Figure 22-8-3F.

- 3.18 The natural geology in this area, which was situated in a low point in the landscape, was characterized by dense sandy clays. Palaeochannel or pond deposits recorded at the north end of Trench 38 indicate that this location has been a wet environment prone to flooding for a long time. A small number of discrete pits were excavated in this area, along with a possible linear ditch terminus in Trench 37. The

pits were positioned in softer natural sands, similar to activity seen to the south in Trench 34 (Figure 22-8-3B). Fills were typically pale and sandy, resembling natural sterile deposits, but they filled features which had regular edges and, in some cases, sharp horizons against the underlying geology. The pits produced no finds but environmental samples may yield dating evidence for this activity.

Southwest corner of site (Trenches 40-44): low concentration of undated and post-medieval archaeological features. Figure 22-8-3G.

- 3.19 The southwest corner of the site was characterized by soft, sandy natural deposits which appear to have settled in a broad depression in the underlying boulder clay. The ground was soft and prone to flooding. A broad natural hollow or pond was recorded in Trench 41, and a naturally deposited sequence of soft sandy deposits was noted in parts of Trenches 40, 43 and 44. A small number of undated features were identified in this area as well as probable post-medieval activity.
- 3.20 In Trench 42, a single undated pit or terminus of a ditch may represent archaeological activity pre-dating the post-medieval period; it contained a pale and sterile fill. An approximately north-south aligned ditch also crossed Trenches 40 and 43, within a very boggy part of the area. This feature was shallow and contained no finds.
- 3.21 To the west of the small ditch in Trench 43 was a spread of cobble stones which resembled a dump of hard material to consolidate the ground (rather than a more ordered surface or trackway). It was sealed by a dark silty sand layer. This activity was undated but the cobbles appeared to have been imported and dumped within a gritty sandy matrix and were most likely deposited in the post-medieval period. At the south end of Trench 40 a further late feature was recorded: a northwest-southeast aligned ditch containing a blackish fill with brick inclusions.

Substation Zone

- 3.22 The Substation Zone consisted of a combination of pasture and arable fields (Figures 22-8-4A, B and C). The southeastern corner of the substation site was low lying at approximately 21.8m aOD but to the north of this area the land rose steeply, particularly to the north of Trenches 86-89 (Figures 22-8-4B and 22-8-5A) where it reached a summit at 35.18m aOD. The natural geology was encountered within the trenches between 21.4m aOD and 34.9m aOD.
- 3.23 The evaluation demonstrated that significant archaeological features generally survived in the low-lying region, rather than on the higher ground (where one would typically expect settlement activity). However, the lower incidence of archaeological features on the higher ground (particularly in Trenches 70-79; Figure 22-8-4B) may be due to differential truncation of deposits. In the southeastern corner of the site where archaeological preservation was good, the archaeological features were sealed by colluvial and subsoil deposits which provided a degree of protection from plough truncation. To the north on the higher ground, these sealing deposits were not present and any potential archaeological features would have been subject to much greater attrition through ploughing, potentially removing some entirely (the natural geology on the northern parts of the site showed evidence of heavy ploughing).
- 3.24 Across the eastern two thirds of the Substation Zone site, archaeological features were cut by furrows (remnants of ridge and furrow ploughing regimes) but these were not evident on the western third of the site. Other than in the southeastern corner of the site, subsoils were generally absent, the archaeological features and furrows being sealed by a ploughsoil.

Southeastern corner of the site: large ditches of probable Romano-British date. Figures 22-8-4B and 22-8-5A.

- 3.25 The results from the geophysical survey and archaeological evaluation demonstrated that a focus of archaeological activity lay in the southeastern corner of the site (Trenches 81-91). The geophysical survey results indicated potential rectilinear enclosures defined by north-south aligned ditches running along either side of an east-west aligned ditched trackway or settlement boundary. For the most part, the features recorded in this area during the evaluation accorded with the results of the geophysical survey, although one linear geophysical anomaly running through the southern ends of Trenches 88 and 89 was not apparent within these trenches.
- 3.26 Substantial east-west aligned ditches associated with the trackway were recorded in Trenches 82 and Trenches 86-89 (they were up to 3.7m wide and 1.2m deep). These ditches had largely been cut through the natural chalk geology and presumably therefore drained fairly freely. Their fills consisted largely of redeposited chalk combined with silt and clay. It seems likely that a proportion of the fill material derived from upcast material from the original excavation of the ditches that had slumped back into the ditches (potentially bank material). In addition, these large ditches had been recut numerous times which implies they required significant maintenance and, potentially, demarcated a significant boundary that was redefined on a regular basis.
- 3.27 The north-south aligned ditches recorded in Trenches 81, 84, 85 and 91 were considerably smaller than the ones demarcating the east-west aligned trackway. They likely defined small enclosures which may not have required deep ditches. The ditch in Trench 91 terminated within the trench but the corresponding geophysical anomaly continued north beyond the trench limit. It is possible therefore that the terminus may have demarcated the southern side of an entrance. The north-south aligned ditch recorded in Trench 85 was found to continue in Trench 84 to the south, although this continuation was not picked up in the geophysical survey.
- 3.28 The trackway ditches produced significant assemblages of pottery and animal bone which implies settlement/occupation in the near vicinity. The north-south aligned enclosure ditches produced fewer finds but these included further pottery sherds. Much of the pottery retrieved is thought to be of Romano-British date. Refuse pits and fire pits, some containing additional pottery sherds, were also recorded in Trenches 86, 87 and 88, and are also potentially indicative of domestic activity. The pit in Trench 86 also produced several corroded iron objects. It is notable that these discrete features largely lay to the north of the trackway ditches, perhaps indicating that the original focus of settlement activity lay to the north on the higher ground (the evidence for which having been largely removed by repeated ploughing).
- 3.29 The large ditches in Trenches 82 and 86-89 were sealed by colluvial deposits which also produced sherds of potentially Romano-British pottery. These deposits together with later subsoil and topsoil deposits protected the ditches by up to 0.90m of overburden.
- 3.30 Discrete archaeological features were recorded in the trenches further to the north of the trackway on the higher ground but they were not widespread (Trenches 74, 75, 77 and 90). An undated pit was recorded in Trench 74 and an undated north-south aligned ditch was recorded in Trench 75 (Figure 22-8-5B). A north-south aligned ditch in Trench 77 is thought to be field boundary or drainage ditch, potentially of medieval or post-medieval date (Figure 22-8-5B). Trench 90 contained the remnants of a fire pit, although it was heavily truncated (Figure 22-8-5A).

Dispersed features across the remainder of the site. Figures 22-8-4B, 4C and 22-8-5C-E.

- 3.31 To the northeast, in Trench 66, a single undated pit was recorded which appeared to be a fire pit (Figures 22-8-4B and 22-8-5C). Trench 66 also contained a post-medieval field boundary ditch which continued into Trench 65 to the south (this feature had been identified during the geophysical survey) (Figures 22-8-4B and 22-8-5C). Another post-medieval boundary ditch, also recorded during the geophysical survey, was excavated in Trench 60; two small pits to the northwest of the ditch are also thought to represent post-medieval activity (Figures 22-8-4B and 22-8-5C).
- 3.32 On the western side of the site, a large ditch was recorded in Trench 117 which appeared to turn within the trench from an east-west alignment to a north-south alignment (Figures 22-8-4C and 22-8-5D). This ditch may therefore define the corner of an enclosure, the main body of which lay to the northwest of the trench. The ditch produced a single, small, largely non-diagnostic fragment of handmade pottery; it may be of Iron Age or Romano-British date.
- 3.33 Trench 115 contained an isolated undated pit containing refuse from a fire (Figures 22-8-4C and 22-8-5D). Trench 118 contained a post-medieval field boundary ditch that had been identified by the geophysical survey, and Trenches 111, 116 and 117 contained a modern north-south aligned drainage ditch (Figures 22-8-4C and 22-8-5D). Trench 112 contained a similar most likely modern drainage ditch (Figures 22-8-4C and 22-8-5D).
- 3.34 Undated linear gullies were recorded in Trenches 109, 110 and 111 (Figs 22-8-4C and 22-8-5E) which may relate to field systems of unknown date.

4. Post-Excavation Tasks to Complete

- 4.1 In order to complete the Phase 1 post-excavation assessment, the following tasks are required.
- Completion of soil sample processing, and retent and flot sorting.
 - Distribution of retent finds to relevant specialists.
 - Completion of specialist finds and environmental assessments.
 - Completion of monolith assessment.
 - Submission of selected fast-track, range finder radiocarbon samples.
 - Completion of report text.
 - Completion of report illustration.
 - Integration of specialist assessment results and radiocarbon dates into site narrative.
 - Completion of OASIS entry.
- 4.2 It is assumed that archive preparation and museum deposition will take place at later stages of the project.

5. Site Archive Quantification

- 5.1 For the purposes of site recording, the prefixes DBS1, DBS3 and DBS4 were used for the Substation Zone and the prefix DBS2 for the Landfall Area. The finds quantifications by site and material type are as follows:

Material	Site				Totals
	DBS1	DBS2	DBS3	DBS4	
Pot - Prehistoric	0	124	266	0	390
Pot - IA / RB	0	814	260	0	1074
Pot - Medieval	2	532	32	0	566
Pot - Post-med	21	3	0	0	24
CBM	3	11	0	0	14
Glass	7	31	0	0	38
CTP	4	2	0	0	6
Metal - Fe	2	24	11	0	37
Slag	0	10	1	0	11
Animal bone	11	867	323	0	1201
Shell	0	27	0	0	27
Lithics	0	18	17	0	35
Daub / Fired clay	0	12	1	0	13
Stone	17	9	0	0	26
Shale	0	0	0	3	3
Coal	0	1	0	0	1
Fossil	0	1	0	0	1
Totals	67	2486	911	3	3467

5.2 The site archive quantifications are as follows:

Archive type	Landfall Area (DBS2)	Substation Zone (DBS1, DBS3, DBS4)
Trench Sheets	105	67
Context Sheets	1047	314
Photo Register sheets - Digital	34	24
Photo register sheets - B&W	9	0
Drawing Register sheets	19	9
Sheet Register sheets	9	5
Sample Register sheets	26	9
RF Register sheets	2	2
Permatrace drawing sheets	225	84
Section/plan drawings	442	205
Digital Photographs	3218	3831
Black and White Photographs	273	142
Environmental Samples (bulk)	277	84
Monolith Samples	3	2

Appendix 1

Trench Summaries

Dogger Bank South Interim Evaluation Report: Trench and Feature catalogue

Trench Number	Feature count	Feature type	Main cut number	Pottery present?	Lithics present?	Bone/organics present? (C14 potential)	Other potential dating evidence present?	Notes	Provisional time period
---------------	---------------	--------------	-----------------	------------------	------------------	--	--	-------	-------------------------

1

Trench number	<input type="text" value="1"/>	WSI trench ID	<input type="text" value="1313.23"/>
Site ID	<input type="text" value="DBS1"/>	Area ID	<input type="text" value="Landfall 8"/>
Archaeology present?	<input checked="" type="checkbox"/>	Furrow(s) present?	<input checked="" type="checkbox"/>
		Pond/palaeochannel deposits present?	<input type="checkbox"/>

1	N-S orientated ditch containing 2 fills. Truncated by modern land drain [122].	119	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		
2	Sub-rounded small pit (or natural feature)	105	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		Undated
3	Sub-rounded small pit (or natural feature)	107	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		Undated
4	N-S orientated furrow containing 1 fill. Partially excavated as obscuring features.	103	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		Post-Med
5	Modern land drain cutting ditch 119 - contained pottery possibly displaced from ditch	122	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Only included here due to pottery find	Modern

Trench Number	Feature count	Feature type	Main cut number	Pottery present?	Lithics present?	Bone/organics present? (C14 potential)	Other potential dating evidence present?	Notes	Provisional time period
---------------	---------------	--------------	-----------------	------------------	------------------	--	--	-------	-------------------------

2

Trench number	2	WSI trench ID	1313.28
Site ID	DBS2	Area ID	Landfall 8
Archaeology present?	<input checked="" type="checkbox"/>	Furrow(s) present?	<input checked="" type="checkbox"/>
		Pond/palaeochannel deposits present?	<input type="checkbox"/>

1	E-W orientated small ditch containing 4 fills; recut [206] containing 1 fill	203	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		Undated, suspected Iron Age/RB
2	Curvilinear ditch, NE-SW orientated. Possible terminus (context 213) also excavated.	210	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>		Undated
3	Elongated linear pit with rounded ends, containing 2 fills. Positioned to south of ditch [203].	215	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		Undated

3

Trench number	3	WSI trench ID	1313.22
Site ID	DBS2	Area ID	Landfall 8
Archaeology present?	<input checked="" type="checkbox"/>	Furrow(s) present?	<input checked="" type="checkbox"/>
		Pond/palaeochannel deposits present?	<input type="checkbox"/>

1	Possible small pit or terminus of a linear feature; contained a single fill.	303	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		Undated
---	--	-----	--------------------------	--------------------------	--------------------------	--------------------------	--	---------

Trench Number	Feature count	Feature type	Main cut number	Pottery present?	Lithics present?	Bone/organics present? (C14 potential)	Other potential dating evidence present?	Notes	Provisional time period
	2	A sequence of NW-SE orientated ditches, beginning with a large ditch cut [330]. The feature was recut a number of times and contained multiple fills.	330	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	Huge quantity of pottery, including an intact vessel. Also a shale object.	Iron Age / Romano-British
	3	Large N-S orientated ditch with a later smaller recut [319] containing a land drain. A probable field boundary which was later reused for drainage.	313	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Post-Med glass and CBM recovered from the later drainage cut [319].	Late Med to post-Med
	4	N-S orientated furrow truncating the ditch [313] and the drainage cut [319], and thus fully excavated.	321	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		post-Med
	5	N-S orientated ditch containing a tip of large stones and a single silty fill.	354	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>		Iron Age / R-B
	6	Sub-rounded small pit with 2 fills, cut into the backfilled ditch [354].	356	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		Iron Age / R-B
	7	N-S orientated ditch with numerous fills and a later recut [379]. A final small-scale recut [381] was the last phase of use. Probable boundary ditch.	355	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Pot & bone from original cut [355]. Pot from final recut [381].	Iron Age / R-B
	8	NW-SE orientated ditch with 3 fills. Feature was at the corner of the trench and only the SW edge of the ditch was seen, not its full profile.	343	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		Undated

Trench Number	Feature count	Feature type	Main cut number	Pottery present?	Lithics present?	Bone/organics present? (C14 potential)	Other potential dating evidence present?	Notes	Provisional time period
---------------	---------------	--------------	-----------------	------------------	------------------	--	--	-------	-------------------------

4

Trench number	<input type="text" value="4"/>	WSI trench ID	<input type="text" value="1313.21"/>
Site ID	<input type="text" value="DBS2"/>	Area ID	<input type="text" value="Landfall 8"/>
Archaeology present?	<input checked="" type="checkbox"/>	Furrow(s) present?	<input checked="" type="checkbox"/>
		Pond/palaeochannel deposits present?	<input type="checkbox"/>

1	WNW-ESE orientated linear ditch containing 4 fills.	406	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		Undated
2	E-W orientated linear ditch containing 1 fill. Recut by [420] and [424] with multiple fills. Possible southern trackway ditch.	407	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	8 pieces pot from (408). 2 pieces of pot, 1 piece animal bone from fill (422). C.20 pieces pot, c.5 pieces animal bone from fill (423). >20 pieces pot and 3 pieces animal bone from fill (425).	Iron Age / R-B
3	Oval pit containing 2 fills; cut into ditch recut [420] and truncated by later ditch recut [424]. A possible refuse pit.	410	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		Undated
4	Possible terminus or circular pit containing 1 fill. Truncates ditch [418]	412	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		Undated

Trench Number	Feature count	Feature type	Main cut number	Pottery present?	Lithics present?	Bone/organics present? (C14 potential)	Other potential dating evidence present?	Notes	Provisional time period
	5	NW-SE orientated linear gully containing 1 fill. Truncated by [418]	414	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		Undated
	6	N-S orientated furrow containing 1 fill. Same as [449]. Truncates [412], [418], [414] and [451], [436]=[448]	415	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		Undated
	7	NW-SE orientated gully containing 1 fill. Truncated by possible pit [412] and a land drain, truncates gully [414].	418	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	4 pieces Roman pot from (417)	Iron Age / R-B
	8	Large sub-circular pit containing 2 fills. Truncated by pits [431] and [433].	429	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	1 piece Roman pot from (430).	Iron Age / R-B
	9	Sub-circular pit containing 3 fills. Truncates pit [429]; truncated by pit [433].	431	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	5 pieces pot from (438).	Iron Age/Romano-British
	10	Sub-circular pit containing 4 fills. Truncates pit [431].	433	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	1 piece pot from (439).	Iron Age / R-B
	11	Irregular oval pit containing 6 fills. Same as [448]. Cut by ditch [451].	436	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	>10 pieces pot from (447).	Iron Age / R-B
	12	E-W orientated ditch containing 5 fills; recut by [435]. Probable boundary ditch. Cuts pit [436]=[448].	451	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Pot and possible shale from (464).	Iron Age / R-B

Trench Number	Feature count	Feature type	Main cut number	Pottery present?	Lithics present?	Bone/organics present? (C14 potential)	Other potential dating evidence present?	Notes	Provisional time period
	13	NW-SE orientated rounded gully terminus containing 1 fill.	452	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		Undated
	14	NW-SE orientated ditch containing 5 fills; recut by [479]. Probable northern trackway ditch.	473	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	6 pieces pot from (474). C.10 pieces pot from (485). >10 pieces from topmost fill (487).	Iron Age / R-B

5

Trench number	<input type="text" value="5"/>	WSI trench ID	<input type="text" value="1313.01"/>
Site ID	<input type="text" value="DBS2"/>	Area ID	<input type="text" value="Landfall 8"/>
Archaeology present?	<input checked="" type="checkbox"/>	Furrow(s) present?	<input checked="" type="checkbox"/>
		Pond/palaeochannel deposits present?	<input type="checkbox"/>

	1	NW-SE orientated linear ditch containing 1 fill.	504	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		Undated
	2	N-S orientated furrow containing 1 fill.	506	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		Undated
	3	NW-SE orientated linear ditch containing 3 fills. Probable northern trackway ditch.	508	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		Undated, suspected IA/R-B
	4	N-S orientated furrow containing 1 fill.	512	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		Undated

Trench Number	Feature count	Feature type	Main cut number	Pottery present?	Lithics present?	Bone/organics present? (C14 potential)	Other potential dating evidence present?	Notes	Provisional time period
	5	Oval possible pit or terminus containing 1 fill.	514	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		Undated
	6	Broad pit - possible pond - containing 2 fills. Truncates feature [519].	518	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	6 pieces pot from (524). >10 pieces pot and >20 pieces animal bone from (525)	Iron Age / R-B
	7	Cut of feature containing 1 visible fill. Extent unclear; continues beyond trench to the south, truncated in trench by [518].	519	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		Undated
	8	Small WNW-ESE aligned linear gully containing 2 fills.	522	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Surface find of slag on top of (521).	Undated
	9	Large N-S orientated furrow containing 3 fills. Truncates colluvial deposit (526) and possible drainage feature [518].	527	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	3 pieces CBM from (529).	Undated, suspected Med or Post Med
	10	Linear N-S orientated field drain containing 2 fills. Truncates deposit (531).	532	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	CBM field drain from (533).	Post-med
	11	Linear E-W orientated ditch containing 3 fills. Recut by [538] and [541]. Probable southern trackway ditch.	535	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	1 animal bone from (536).	Undated

Trench Number	Feature count	Feature type	Main cut number	Pottery present?	Lithics present?	Bone/organics present? (C14 potential)	Other potential dating evidence present?	Notes	Provisional time period

1	Oval pit containing 4 fills, adjacent to pits [3413] and [3415]. High concentration of burnt angular stone in uppermost fill.	3404	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		Undated
2	Small elongated oval possible pit containing one fill. Possibly geological.	3402	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		Undated
3	Truncated pit containing one fill and cut by pit [3415]. Contained high concentration of angular burnt stones in a dark fill; possible high charcoal content.	3413	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	High potential for charcoal from environmental sample	Undated
4	Cut of oval pit with 2 fills which truncated pit [3413]. High concentration of burnt angular stones in both fills. Possible charcoal content.	3415	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	High potential for charcoal from environmental sample	Undated
5	Small oval pit containing 2 fills. Sealed by flood layer (3442)	3430	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		Undated
6	Cut of possible pit or pond containing a sequence of 4 fills. Truncated by post-med ditch [3435].	3437	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		Undated

Trench Number	Feature count	Feature type	Main cut number	Pottery present?	Lithics present?	Bone/organics present? (C14 potential)	Other potential dating evidence present?	Notes	Provisional time period
	7	Cut of elongated oval pit or linear terminus. Contained 1 fill.	3423	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		Undated
	8	Cut of irregular oval shallow pit truncating [3421]. Contained 1 fill.	3418	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		Undated
	9	Cut of small oval pit containing 1 fill. Truncated by [3418].	3421	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		Undated
	10	Cut of moderate sized, steep-sided oval pit containing 1 fill. Adjacent to pits [3418], [3421].	3409	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		Undated
	11	Cut of east-west orientated linear ditch containing a ceramic land drain and 4 fills. Truncated pit/pond [3437].	3435	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		Post-medieval
	12	Small sub-oval feature, on excavation proved to be a natural tree throw with a single fill. Associated with root channel [3427].	3425	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		Natural, undated
	13	Small circular feature in plan, proved to be a root channel on excavation. Probable root network associated with tree hollow [3425].	3427	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		Natural, undated.

Figure 22-8-5D

DOGGER BANK SOUTH, EAST YORKSHIRE:
INTERIM ARCHAEOLOGICAL EVALUATION
REPORT

**Substation: Detail view of Trenches
115-118**

- Legend**
- ▭ Onshore Development Area
 - ▭ Trench Top
 - ▭ Trench Base
 - ▭ LOE Top
 - ▭ LOE Base
 - ▭ Excavated
 - ▭ Feature
 - ▭ Base of Feature
 - ▭ Field Drain
 - ▭ Natural
- Geophysics Interpretation - Magnometer
- Linear Trend (Unclear Origin)
 - - - Linear Trend (Agricultural, Ploughing)
 - Linear Trend (Drainage)
 - Anomaly (Unclear Origin)
 - Spread (Unclear Origin)
 - Spread (Magnetic Disturbance)
 - Anomaly (Ferrous/Iron Spike)

Drawn/checked:	SD
DWG no:	01/53087/REP/01/01
AOC Project No:	53087

SYSTEM
Coordinate System: British National Grid
Projection: Transverse Mercator
Datum: OSGB 1936
