1 INTRODUCTION

This annex provides tables of seabird density in each survey for each species recorded during the DBS East and West Offshore Wind Farm projects' baseline surveys (March 2021 – February 2023).

The densities were estimated using design-based methods and are summarised as central estimate (i.e. extrapolated from the number seen in the surveyed area to the whole area) and 95% confidence range, derived from 1,000 nonparametric bootstrap samples.

This appendix (a) provides the density in each survey for each species on the water and in flight.

Appendix (b) provides the density in each survey for each species on the water.

Appendix (c) provides the density in each survey for each species in flight.

Table 1. DBS - East. Density (birds Per Square Km) of Arctic skua recorded in flight and on the sea, S.D. and 95% confidence intervals and co-efficient of variation, in the Array Area, Array Area and 2km buffer and Array Area and 4km buffer.

Month	Density

MacArthur Green is helping combat the climate crisis by operating a biodiversity positive, carbon conscious business. Read more at www.macarthurgreen.com

1 INTRODUCTION

This annex provides tables of seabird density in each survey for each species recorded during the DBS East and West Offshore Wind Farm projects' baseline surveys (March 2021 – February 2023).

The densities were estimated using design-based methods and are summarised as central estimate (i.e. extrapolated from the number seen in the surveyed area to the whole area) and 95% confidence range, derived from 1,000 nonparametric bootstrap samples.

Appendix (a) provides the density in each survey for each species on the water and in flight.

This appendix (b) provides the density in each survey for each species on the water.

Appendix (c) provides the density in each survey for each species in flight.

Table 1. DBS - East. Density (birds Per Square Km) of Arctic skua recorded on the sea, S.D. and 95% confidence intervals and co-efficient of variation, in the Array Area, Array Area and 2km buffer and Array Area and 4km buffer.

1 INTRODUCTION

This annex provides tables of seabird density in each survey for each species recorded during the DBS East and West Offshore Wind Farm projects' baseline surveys (March 2021 – February 2023).

The densities were estimated using design-based methods and are summarised as central estimate (i.e. extrapolated from the number seen in the surveyed area to the whole area) and 95% confidence range, derived from 1,000 nonparametric bootstrap samples.

Appendix (a) provides the density in each survey for each species on the water and in flight.

Appendix (b) provides the density in each survey for each species on the water.

This appendix (c) provides the density in each survey for each species in flight.

Table 1. DBS - East. Density (birds Per Square Km) of Arctic skua recorded in flight, S.D. and 95% confidence intervals and co-efficient of variation, in the Array Area, Array Area and 2km buffer and Array Area and 4km buffer.
