

Mallard Pass

I wish that I am opposed to this development for the following reasons :-

Impact on local residential areas.

Proximity to conservation area.

Not financially viable form of sustainable energy.

Loss of farm land that the UK will be negative in by 2030

It also contravenes SKDC's criteria for Solar development following clauses

Section 3

3.18,3.19,3.22,3.27,3.28 and 3.39

I am contacting you concerning the above to voice my dismay that such a project could even be considered so close to Stamford a conservation area and Local Villages. It will permanently be a scar on the beautiful landscape. I ask you these questions :-

1. Was the substation on Essendine road constructed with this project in mind, If so were you aware of the proposal then ?
2. Have you been aware of this project prior to this consultation paper.?
3. Are you pro active in supporting or opposing this project.?
3. Do you agree that such sites should be away from populated areas to reduce their effect on peoples environment.?
4. Could not an area such as the Quarry near Ketton be used having the panels lower would lessen their impact and with suitable planting make them generally invisible in the area. What do you think to this suggestion. ?

I am supportive in achieving lower carbon emissions and have seen similar installations , however these have been sited away from populated areas near train lines etc which don,t impinge on inhabited areas.

I have written to you before on 2 occasions in the past regarding Brexit, asking specific questions but did not have the courtesy of a reply from you on either

Mr. P Archer
