

I would firstly like to state that this process is very complicated for the general public - and that many people I know feel they have already written several representations of complaint to their MP or other bodies, or made comments when first registered on this site

I would like to be assured that all previous comments will be regarded

I have already stated my concerns on this platform - which are published and would like all my previous points taken note of

Further to these I would like to add the grave concern that our countryside will be desecrated - it will never be farmland again - it will be far too difficult and costly to remove the invasive metal works several metres down into the soil

We will lose out heritage and our future

The land will be in the control of foreign companies - who have no interest in our welfare - or our future

This is so ill thought out due to the fact that these solar panels are made in countries using coal fired electricity - the carbon footprint will take 20 years to balance

However the solar panels will need replacing in 15/20 years time -

This is a futile exercise - very costly to the lives of all who live here

This will be a wasteland
