

John Hughes ref: ID 200361414

Submission ID: 16748 (REP1-035)

Justification for suggested location for site inspection.

Following the above submission which was for an accompanied site visit on private land I note I've not submitted a justification for requested location a draft itinerary for the request.

The justification would be for the examining inspectorate to come to the property of 9 Glen Crescent, Essendine to understand how reaching the current view are from the property at ground floor window level in the Lounge, Kitchen, Conservatory and Garden out over field 26 and how the site of the of the substation and ancillary buildings in field 19 and also the PV arrays in field 18 will never blend into the landscape even with mitigated planting and show the true visual impact MPSF would have from a residents perspective, based on the current subsation

The substation and ancillary buildings are the tallest structures to which there is the least detail
