

I again am objecting to the Mallard Pass Solar Farm (Ltd.)'s application on grade 1 arable land in south Lincolnshire. As before this proposal is a threat to the lives of the population both from an environmental and traditional way of life. The possible gains are outweighed by the detrimental effects on nature. This is a well-known flood risk area having flooded quite recently.

Solar panels are best put on property and industrial structures.

No jobs will be generated after the construction

Please listen to the comments of citizens of all over this country who are concerned for future generations and the legacy that will be left them.
