## 1. INTRODUCTION

#### 1.1. PURPOSE OF THE DOCUMENT

- 1.1.1. This Policy Accordance Tracker has been prepared by WSP UK Limited on behalf of Cory Environmental Holdings Limited ('the Applicant') and relates to an application for a Development Consent Order ('DCO Application') that has been submitted to the Secretary of State ('SoS') for Energy Security and Net Zero ('DESNZ') under section 37 of the Planning Act 2008 ('PA 2008') [1].
- 1.1.2. By way of letter dated 6th October 2022, the Secretary of State (SoS) made a Direction, under Section 35(1) of the Planning Act 2008 (PA2008), that the Proposed Scheme should be treated as development for which development consent under the PA2008 (as amended) is required and therefore a Project of National Significance (PNS). Paragraph 1.3.10 of NPS EN-1 states that "EN-1, in conjunction with any relevant technology specific NPS, will be the primary policy for Secretary of State decision making on projects in the field of energy for which a direction has been given under section 35". This means that the Proposed Scheme will be determined under section 104 of the PA2008, and that NPS EN-1 will apply to the Proposed Scheme.
- 1.1.3. The UK Government has concluded that there is a Critical National Priority (CNP) for the provision of nationally significant low carbon infrastructure. Pursuant to paragraphs 3.5.8 and 4.2.5 of NPS EN-1, it is considered that the Proposed Scheme constitutes a scheme of CNP as defined by that NPS.
- 1.1.4. This document is used to determine the accordance of the Proposed Scheme with the National Policy Statement (NPS) considered to be an important and relevant consideration in decision-making by the SoS. The Applicant considers this to be:
  - Overarching National Policy Statement for Energy (EN-1)
- 1.1.5. This Policy Accordance Tracker also details compliance of the Proposed Scheme in accordance with relevant national and development plan policy, as these are considered to be 'important and relevant matters' for the Secretary of State to take into account, comprising: the National Planning Policy Framework (NPPF); the London Plan (Greater London Authority); the Bexley Local Plan (London Borough of Bexley); and the South East Inshore Marine Plan (Marine Management Organisation (MMO). The UK Marine Policy Statement is dealt with in the **Planning Statement** (Document Reference 5.2).
- 1.1.6. This document will be reviewed and updated throughout the Examination, as and when required.

#### **1.2. THE PROPOSED SCHEME**

1.2.1. The Applicant is seeking development consent for the proposed construction, operation and maintenance of a carbon capture storage project (hereafter referred to as the Proposed Scheme) to capture carbon dioxide from energy from waste facilities

Riverside 1 and Riverside 2 (at the time of writing, construction works for Riverside 2 are being undertaken) at the Riverside Campus, located adjacent to the River Thames at Belvedere in the London Borough of Bexley (LBB).

 1.2.2. A full description of the Proposed Scheme is detailed in Chapter 2: Site and Proposed Scheme Description (Volume 1) of the Environment Statement (ES) (Document Reference 6.1.2) (as submitted with the application).

#### Table 1-1: Accordance with National Policy Statement EN-1

Policy	Policy Text	Proposed Scheme Compliance with NPS
	4.1.6 In this context, the Secretary of State should take into account environmental, social and economic benefits and adverse impacts, at national, regional and local levels. These may be identified in this NPS, the relevant technology specific NPS, in the application or elsewhere (including in local impact reports, marine plans, and other material considerations as outlined in Section 1.1).	In response to para 4.1.8: The Statement of and the Schedule of Negotiations and Pow 4.4) provides details on the land that as requ and for the provision of related mitigation and the Applicant seeks compulsory acquisition of under the usual compulsory acquisition prince
	4.1.7 Where this NPS or the relevant technology specific NPS require an Applicant to mitigate a particular impact as far as possible, but the Secretary of State considers that there would still be residual adverse effects after the implementation of such mitigation measures, the Secretary of State should weigh those residual effects against the benefits of the proposed development. For	In response to para 4.1.10 – 4.1.15: The <b>Pla</b> <b>Reference 5.2)</b> assesses the Proposed Sch EN-1 and other policy considerations which and relevant matters including the South Eas relevant development plan policy.
	projects which qualify as CNP Infrastructre, it is likely that the need case will outweigh the residual effects in all but the most exceptional cases. This presumption, however, does not apply to residual impacts which present an unacceptable risk to, or interfere with, human health and public safety, defence, irreplaceable habitats or unacceptable risk to the achievement of net zero. Further, the same exception applies to this presumption for residual impacts which present	The established benefits of the Proposed Sc Benefits Report (Document Reference 5.4 (Document Reference 5.2) balances these adverse impacts in considering these policie compliance with these documents has been
	an unacceptable risk to, or unacceptable interference offshore to navigation, or onshore to floor and coastal erosion risk.	In response to para 4.1.17 – 4.119: The App community, statutory bodies, and other relev Scheme. Two stages of consultation have be engagement with key stakeholders. Early en

	Secretary of State in considering applications for nationally significant energy infrastructure, (or therefore the "benchmark" for what is, or is not, an acceptable nationally significant energy development).	related in scale and kind to the proposed dev respects.
	4.1.11 The energy NPS have taken account of the National Planning Policy Framework (NPPF), the Planning Practice Guidance for England, and Planning Policy Wales and Technical Advice Notes (TANs) for Wales, where appropriate. <sup>95</sup>	The above demonstrates that the Propose policy aims set out in Part 4.1 of EN-1.
	4.1.12 Other matters that the Secretary of State may consider both important and relevant to their decision-making may include Development Plan documents or other documents in the Local Development Framework.	
	4.1.13 Where the project conflicts with a proposal in a draft Development Plan, the Secretary of State should take account of the stage which the Development Plan document in England or Local Development Plan in Wales has reached in deciding what weight to give to the plan for the purposes of determining the planning significance of what is replaced, prevented, or precluded.	
	4.1.14 The closer the Development Plan document in England or Local Development Plan in Wales is to being adopted by the LPA, the greater weight which can be attached to it.	
	4.1.15 In the event of a conflict between these documents and an NPS, the NPS prevails for the purpose of Secretary of State decision making given the national significance of the infrastructure.	
	Development consent	
	4.1.16 The Secretary of State should only impose requirements in relation to a development consent that are necessary, relevant to planning, relevant to the development to be consented, enforceable, precise, and reasonable in all other respects.	

evelopment, and reasonable in all other

sed Scheme is consistent with the

Overarching National Policy Statement for Energy (EN-1) Designated January 2024		
Policy	Policy Text	Proposed Scheme Compliance with NPS E
	4.1.17 The Secretary of State should consider the guidance in the NPPF, the Planning Practise Guidance: Use of Planning Conditions, and TANs, or any successor documents, where appropriate.	
	4.1.18 The Secretary of State may consider any development consent obligations that an Applicant agrees with local authorities. These must be relevant to planning, necessary to make the proposed development acceptable in planning terms, directly related to the proposed development, fairly and reasonably related in scale and kind to the proposed development, and reasonable in all other respects.	
	Early engagement	
	4.1.19 Early engagement both before and at the formal pre-application stage between the Applicant and key stakeholders, including public regulators, Statutory Consultees (including Statutory Nature Conservation Bodies (SNCBs), and those likely to have an interest in a proposed energy infrastructure application, is strongly encouraged in line with the Government's pre-application guidance. This means that only applications which are fully prepared and comprehensive can be accepted for examination, enabling them to be properly assessed by the Examining Authority and leading to a clear recommendation report to the Secretary of State.	
	4.1.20 This is particularly so in the case of HRA matters covered in paragraphs 5.4.25 to 5.4.31 below, which explain the onus is on the Applicant to submit sufficient information to enable the Secretary of State to conduct an Appropriate Assessment if required.	
	Financial and technical viability	
	4.1.21 In deciding to bring forward a proposal for infrastructure development, the Applicant will have made a judgement on the financial and technical viability of the proposed development, within the market framework and taking account of government interventions.	
	4.1.22 Where the Secretary of State considers that the financial viability and technical feasibility of the proposal has been properly assessed by the Applicant, it	

Designated January 2024		
Policy	Policy Text	Proposed Scheme Compliance with NPS El
	is unlikely to be of relevance in Secretary of State decision making (any exceptions to this principle are dealt with where they arise in this or other energy NPS and the reasons why financial viability or technical feasibility is likely to be of relevance explained).	
The Critical National Priority for Low Carbon Infrastructure Part 4.2	4.2.1 Government has committed to fully decarbonising the power system by 2035, subject to security of supply, to underpin its 2050 net zero ambitions. More than half of final energy demand in 2050 could be met by electricity, as transport and heating in particular shift from fossil fuel to electrical technology.	In response to paras $4.2.1 - 4.2.9$ : The Applica Scheme directly contributes to meeting the UK operational the Proposed Scheme will capture (CO <sub>2</sub> ) emissions, which is equivalent to approx one of the largest carbon capture projects in th
the smoo increase and nucl	4.2.2 Ensuring the UK is more energy independent, resilient, and secure requires the smooth transition to abundant, low-carbon energy. The UK's strategy to increase supply of low carbon energy is dependent on deployment of renewable and nuclear power generation, alongside hydrogen and CCUS. Our energy security and net zero ambitions will only be delivered if we can enable the	carbon infrastructure that is sought by NPS EN critical national priority (as per paragraph 3.5.8 energy infrastructure brought into the Planning Direction.
	development of new low carbon sources of energy at speed and scale.	The Proposed Scheme forms infrastructure co benefits from the overarching need case and s given to that need as a starting point for asses
	4.2.3 With smart and strategic planning, the UK can maintain high environmental standards and minimise impacts while increasing the levels of deployment at the scale and pace needed to meet our energy security and net zero ambitions.	The <b>Planning Statement (Document Referen</b> of State (SoS) considers the Proposed Schem of National Significance (PNS), not least becau
	4.2.4 Government has therefore concluded that there is a critical national priority (CNP) for the provision of nationally significant low carbon infrastructure.	"The carbon capture element of the Proposed the decarbonisation of energy from waste deriv delivering over a million tonnes of CO2 saving
	4.2.5 This does not extend the definition of what counts as nationally significant infrastructure: the scope remains as set out in the Planning Act 2008. Low carbon infrastructure for the purposes of this policy means:	achievement of a fully de-carbonised district he authority areas".
	• For electricity generation, all onshore and offshore generation that does not involve fossil fuel combustion (that is, renewable generation, including anaerobic digestion and other plants that convert residual waste into energy, including combustion, provided they meet existing definitions of low carbon; and nuclear generation), as well as natural gas fired generation which is carbon capture ready. cheme is supported by the policies ational Priority infrastructure that P status brings.

Policy	Policy Text	Proposed Scheme Compliance with NPS E
	Non-HRA and non-MCZ residual impacts of CNP Infrastructure	
	4.2.15 Where residual non-HRA or non-MCZ impacts remain after the mitigation hierarchy has been applied, these residual impacts are unlikely to outweigh the urgent need for this type of infrastructure. Therefore, in all but the most exceptional circumstances, it is unlikely that consent will be refused on the basis of these residual impacts. The exception to this presumption of consent are residual impacts onshore and offshore which present an unacceptable risk to, or unacceptable interference with, human health and public safety, defence, irreplaceable habitats or unacceptable risk to the achievement of net zero. Further, the same exception applies to this presumption for residual impacts which present an unacceptable risk to, or onshore to flood and coastal erosion risk.	
	4.2.16 As a result, the Secretary of State will take as the starting point for decision- making that such infrastructure is to be treated as if it has met any tests which are set out within the NPS, or any other planning policy, which requires a clear outweighing of harm, exceptionality or very special circumstances.	
	<ul> <li>4.2.17 This means that the Secretary of State will take as a starting point that CNP Infrastructure will meet the following, non-exhaustive, list of tests:</li> <li>Where development within a Green Belt requires very special circumstances to justify development;</li> <li>Where development within or outside a Site of Special Scientific Interest (SSSI) requires the benefits (including need) of the development in the location proposed to clearly outweigh both the likely impact on features of the site that make it a SSSI, and any broader impacts on the national network of sssis;</li> <li>Where development in nationally designated landscapes requires exceptional circumstances to be demonstrated; and</li> <li>Where substantial harm to or loss of significance to heritage assets should be exceptional or wholly exceptional.</li> </ul>	
	HRA derogations and MCZ assessments for CNP Infrastructure 4.2.18 Any HRA or MCZ residual impacts will continue to be considered under the framework set out in the Habitats Regulations and the Marine and Coastal Access Act 2009 respectively.	

Policy	Policy Text	Proposed Scheme Compliance with NPS EN
,		
	4.2.19 Where, following Appropriate Assessment, CNP Infrastructure has residual adverse impacts on the integrity of sites forming part of the UK national site network, either alone or in combination with other plans or projects, the Secretary of State will consider making a derogation under the Habitats Regulations. <sup>100</sup>	
	4.2.20 Similarly, if during an MCZ assessment, CNP Infrastructure has residual impacts which significantly risk hindering the achievement of the stated conservation objectives for the MCZ, the Secretary of State will consider making a derogation under section 126(7) of the Marine and Coastal Access Act 2009.	
	4.2.21 For both derogations, the Secretary of State will consider the particular circumstances of any plan or project, but starting from the position that energy security and decarbonising the power sector to combat climate change:	
	<ul> <li>Requires a significant number of deliverable locations for CNP Infrastructure and for each location to maximise its capacity. This NPS imposes no limit on the number of CNP infrastructure projects that may be consented. Therefore, the fact that there are other potential plans or projects deliverable in different locations to meet the need for CNP Infrastructure is unlikely to be treated as an alternative solution. Further, the existence of another way of developing the proposed plan or project which results in a significantly lower generation capacity is unlikely to meet the objectives and therefore be treated as an alternative solution.</li> <li>Are capable of amounting to imperative reasons of overriding public interest (IROPI) for hras, and, for MCZ assessments, the benefit to the public is capable of outweighing the risk of environmental damage, for CNP Infrastructure.</li> </ul>	
	4.2.22 For HRAS, where an Applicant has shown there are no deliverable alternative solutions, and that there are IROPI, compensatory measures must be secured <sup>101</sup> by the Secretary of State as the competent authority, to offset the adverse effects to site integrity as part of a derogation. For MCZS, where an Applicant has shown there are no other means of proceeding which would create a substantially lower risk and the benefit to the public outweighs the risk of	

Policy	Policy Text	Proposed Scheme Compliance with NPS E
	damage to the environment, the Secretary of State must be satisfied that measures of equivalent environmental benefit will be undertaken.	
Environmental Effects/ Considerations Part 4.3	4.3.1 All proposals for projects that are subject to the Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the EIA Regulations) must be accompanied by an Environmental Statement (ES) describing the aspects of the environment likely to be significantly affected by the project.	In response to para 4.3.1 and 4.3.2: The Prop Schedule 1 development under paragraph 23 under the category of 'Installations for the cap purposes of geological storage pursuant to D referred to in this Schedule'.
	4.3.2 The Regulations specifically refer to effects on population, human health, biodiversity, land, soil, water, air, climate, the landscape, material assets and cultural heritage, and the interaction between them.	In accordance with the EIA Regulations 2017 (Document Reference 6.1 – 6.4) which asse the Proposed Scheme considering the propose distinguishing the construction and operation
	4.3.3 The Regulations require an assessment of the likely significant effects of the proposed project on the environment, covering the direct effects and any indirect, secondary, cumulative, transboundary, short, medium, and long-term, permanent and temporary, positive and negative effects at all stages of the project, and also of the measures envisaged for avoiding or mitigating significant adverse effects.	In response to para 4.3.3 - 4.3.4: The ES (Do distinguishes between the construction and o Scheme and assesses both the intra and inte Chapter 21: Cumulative Effects (Volume 1)
	4.3.4 To consider the potential effects, including benefits, of a proposal for a project, the Applicant must set out information on the likely significant environmental, social and economic effects of the development, and show how any likely significant negative effects would be avoided, reduced, mitigated or compensated for, following the mitigation hierarchy. This information could include matters such as employment, equality, biodiversity net gain, community cohesion,	6.1). The scope of this assessment was estable described in detail in Chapter 4: EIA Method (Document Reference 6.1). This includes an heritage and impacts to health. 	4.3.13 To help the Secretary of State consider thoroughly the potential effects of a proposed project in cases where the EIA Regulations do not apply and an ES is not therefore required, the Applicant should instead provide information	The Proposed Scheme would also generate a positive contribution to socio-economic well
	proportionate to the scale of the project on the likely significant environmental, social, and economic effects.	This demonstrates that the Proposed Sch
	4.3.14 References to an ES in this NPS and the technology specific NPS should be taken as including a statement which provides this information, even if the EIA Regulations do not apply. Where the NPS require specific information to be provided in the ES, such information should still be provided in this statement.	
	4.3.15 Applicants are obliged to include in their ES, information about the reasonable alternatives they have studied. This should include an indication of the main reasons for the Applicant's choice, taking into account the environmental, social and economic effects and including, where relevant, technical and commercial feasibility.	
	4.3.16 In some circumstances, the NPS may impose a policy requirement to consider alternatives.	
	4.3.17 Where there is a policy or legal requirement to consider alternatives, the Applicant should describe the alternatives considered in compliance with these requirements.	
	Secretary of State decision making	
	4.3.18 The Secretary of State should consider the worst-case impacts in its consideration of the application and consent, providing some flexibility in the consent to account for uncertainties in specific project details.	
	4.3.19 The Secretary of State should consider how the accumulation of, and interrelationship between, effects might affect the environment, economy, or community as a whole, even though they may be acceptable when considered on an individual basis with mitigation measures in place.	

te employment opportunities and provide vellbeing.

cheme complies with Part 4.3 of EN-1.

Policy	Policy Text	Proposed Scheme Compliance with NPS EN
	4.3.20 The Government has set 13 legally binding targets for England under the Environment Act 2021, covering the areas of: biodiversity; air quality; water; resource efficiency and waste reduction; tree and woodland cover; and Marine Protected Areas. Meeting the legally binding targets will be a shared endeavour that will require a whole of government approach to delivery. The Secretary of State have regard to the ambitions, goals and targets set out in the Government's Environmental Improvement Plan 2023 for improving the natural environment and heritage. This includes having regard to the achievement of statutory targets set under the Environment Act.	
	4.3.21 In addition, in exercising functions in relation to Wales, the Secretary of State should consider Section 6 of the Environment (Wales) Act 2016 and seek to maintain and enhance biodiversity, and in so doing promote the resilience of ecosystems, so far as consistent with the proper exercise of the Secretary of State's functions.	
	4.3.22 Given the level and urgency of need for new energy infrastructure, the Secretary of State should, subject to any relevant legal requirements (e.g., under the Habitats Regulations) which indicate otherwise, be guided by the following principles when deciding what weight should be given to alternatives:	
	<ul> <li>the consideration of alternatives in order to comply with policy requirements should be carried out in a proportionate manner; and</li> <li>only alternatives that can meet the objectives of the proposed development need to be considered.</li> </ul>	
	4.3.23 The Secretary of State should be guided in considering alternative proposals by whether there is a realistic prospect of the alternative delivering the same infrastructure capacity (including energy security, climate change, and other environmental benefits) in the same timescale as the proposed development.	
	4.3.24 The Secretary of State should not refuse an application for development on one site simply because fewer adverse impacts would result from developing similar infrastructure on another suitable site, and it should have regard as	

Policy	Policy Text	Proposed Scheme Compliance with NPS EI
	appropriate to the possibility that all suitable sites for energy infrastructure of the type proposed may be needed for future proposals.	
	4.3.25 Alternatives not among the main alternatives studied by the Applicant (as reflected in the ES) should only be considered to the extent that the Secretary of State thinks they are both important and relevant to the decision.	
	4.3.26 As the Secretary of State must assess an application in accordance with the relevant NPS (subject to the exceptions set out in section 104 of the Planning Act 2008), if the Secretary of State concludes that a decision to grant consent to a hypothetical alternative proposal would not be in accordance with the policies set out in the relevant NPS, the existence of that alternative is unlikely to be important and relevant to the Secretary of State's decision.	
	4.3.27 Alternative proposals which mean the necessary development could not proceed, for example because the alternative proposals are not commercially viable or alternative proposals for sites would not be physically suitable, can be excluded on the grounds that they are not important and relevant to the Secretary of State's decision.	
	4.3.28 Alternative proposals which are vague, or immature can be excluded on the grounds that they are not important and relevant to the Secretary of State's decision.	
	4.3.29 It is intended that potential alternatives to a proposed development should, wherever possible, be identified before an application is made to the Secretary of State (so as to allow appropriate consultation and the development of a suitable evidence base in relation to any alternatives which are particularly relevant). Therefore, where an alternative is first put forward by a third party after an application has been made, the Secretary of State may place the onus on the person proposing the alternative to provide the evidence for its suitability as such and the Secretary of State should not necessarily expect the Applicant to have assessed it.	

Policy	Policy Text	Proposed Scheme Compliance with NPS
Health Part 4.4	4.4.1 Energy infrastructure has the potential to impact on the health and well-being ("health") of the population. Access to energy is clearly beneficial to society and to our health as a whole. However, the construction of energy infrastructure and the production, distribution and use of energy may have negative impacts on some people's health.	In response to Paras 4.4.1- 4.4.3: The health workers, local residents and users of adjaced appropriately assessed on a topic-by-topic b (Document Reference 6.1) as appropriate ( Chapter 6: Noise and Vibration, Chapter 1 Chapter 17: Ground Conditions and Soils

## Overarching National Policy Statement for Energy (EN-1)

Designated January 2024

Policy	Policy Text	Proposed Scheme Compliance with NPS E
	4.6.8 Where possible, this data should be shared, alongside a completed biodiversity metric calculation, with the Local Authority and Natural England for discussion at the pre-application stage as it can help to highlight biodiversity and wider environmental issues which may later cause delays if not addressed.	
	4.6.10 Biodiversity net gain should be applied after compliance with the mitigation hierarchy and does not change or replace existing environmental obligations, although compliance with those obligations will be relevant to the question of the baseline for assessing net gain and if they deliver an additional enhancement beyond meeting the existing obligation, that enhancement will count towards net gain.	
	4.6.11 Biodiversity net gain can be delivered onsite or wholly or partially off-site. We encourage details of any off-site delivery of biodiversity net gain to be set out within the application for development consent.	
	4.6.12 When delivering biodiversity net gain off-site, developments should do this in a manner that best contributes to the achievement of relevant wider strategic outcomes, for example by increasing habitat connectivity, enhancing other ecosystem service outcomes, or considering use of green infrastructure strategies. Reference should be made to relevant national or local plans and strategies, to inform off-site biodiversity net gain delivery. If published, the relevant strategy is the Local Nature Recovery Strategy (LNRS). If an LNRS has not been published, the relevant consenting body or planning authority may specify alternative plans, policies or strategies to use.	
	4.6.13 In addition to delivering biodiversity net gain, developments may also deliver wider environmental gains and benefits to communities relevant to the local area, and to national policy priorities, such as	
	<ul> <li>reductions in GHG emissions,</li> <li>reduced flood risk,</li> <li>improvements to air or water quality,</li> <li>climate adaptation,</li> <li>landscape enhancement,</li> <li>increased access to natural greenspace, or</li> <li>the enhancement, expansion or provision of trees and woodlands.</li> </ul>	

Policy	Policy Text	Proposed Scheme Compliance with NPS El
Гопсу		
	The scope of potential gains will be dependent on the type, scale, and location of specific projects. Applicants should look for a holistic approach to delivering wider environmental gains and benefits through the use of nature-based solutions and Green Infrastructure. 4.6.14 The Environment Act 2021 mandated the preparation of Local Nature Recovery Strategies (LNRSs) across England. They are a new system of spatial strategies for nature recovery and will play a major role in providing detail on the best locations to create, enhance and restore nature and deliver wider environmental benefits. LNRSs will also agree priorities for nature recovery and map the most valuable existing areas for nature. They will be critical in delivering new government targets for species abundance and habitat creation commitments, as well as other pressing environmental outcomes for water and flood risk, carbon and tree planting and woodland creations. LNRSs will also drive	
	the creation of a Nature Recovery Network (NRN), a major commitment in the government's 25 Year Environment Plan. 4.6.15 Applications for development consent should be accompanied by a	
	statement demonstrating how opportunities for delivering wider environmental net gains have been considered, and where appropriate, incorporated into proposals as part of good design (including any relevant operational aspects) of the project.	
	4.6.16 Applicants should make use of available guidance and tools for measuring natural capital assets and ecosystem services, such as the Natural Capital Committee's 'How to Do it: natural capital workbook', the government's guidance on Enabling a Natural Capital Approach (ENCA), and other tools that aim to enable wider benefits for people and nature.	
	4.6.17 Where environmental net gain considerations have featured as part of the strategic options appraisal process to select a project, Applicants should reference that information to supplement the site-specific details.	

Page 24 of 262

But high quality and inclusive design goes far beyond aesthetic considerations. The functionality of an object - be it a building or other type of infrastructure - including fitness for purpose and sustainability, is equally important.</li> <li>4.7.2 Applying good design to energy projects should produce sustainable infrastructure sensitive to place, including impacts on heritage, efficient in the use of natural resources, including land-use, and energy used in their construction and operation, matched by an appearance that demonstrates good aesthetic as far as possible. It is acknowledged, however that the nature of energy infrastructure development will often limit the extent to which it can contribute to the enhancement of the quality of the area.</li> <li>4.7.3 Good design is also a means by which many policy objectives in the NPS can be met, for example the impact sections show how good design, in terms of siting and use of appropriate technologies, can help mitigate adverse impacts such as noise. Projects should look to use modern methods of construction and sustainable design practices such as use of sustainable timber and low carbon concrete. Where possible, projects should include the reuse of material.</li> <li>4.7.4 Given the benefits of good design in mitigating the adverse impacts of a project, Applicants should consider how good design can be applied to a project</li> </ul>

Many of the wider impacts of a development, such as landscape and environmental impacts, will be important factors in the design process.         4.7.13 The Secretary of State should consider such impacts under the relevant policies in this NPS. Assessment of impacts must be for the stated design life of the scheme rather than a shorter time period.         4.7.14 The Secretary of State should consider taking independent professional advice on the design aspects of a proposal. In particular, the Design Council can be asked to provide design review for nationally significant infrastructure projects.         125         4.7.15 Further advice on what the Secretary of State should expect Applicants to demonstrate by way of good design is provided in the technology specific NPS where relevant.         4.8.1 Combined Heat and Power (CHP) is the generation of usable heat and electricity in a single process. A CHP station may either supply steam direct to	

pplicant notes the reference to the DTI ent for a CHP assessment, will 'apply to ating station under the Planning Act

Designated January 2024		
Policy	Policy Text	Proposed Scheme Compliance with NPS E
	heating purposes after it has been used to drive electricity generating turbines. The heat can also be used to drive absorption chillers, thereby providing cooling.	The Applicant also notes the Environment Age Combustion and Energy from Waste Power P
	4.8.2 In conventional thermal generating stations, the heat that is raised to drive electricity generation is subsequently emitted to the environment as waste. Supplying steam direct to industrial customers or using lower grade heat, such as	sets out that the Guidance applies to 'new' co Waste (EfW) plants'.
	in district heating networks, can reduce the amount of fuel otherwise needed to generate the same amount of heat and power separately.	However, in the Applicant's view, the Propose 'develop' a generating station, nor to build a <u>n</u> is for the installation of Carbon Capture and S
	4.8.3 CHP is technically feasible for many types of thermal generating stations, including nuclear, EfW, BECCS and hydrogen, although the majority of CHP plants in the UK are fuelled by gas.	35 Direction for the Proposed Scheme has recent extension to one either. As such, a formal 'CH provided for this Proposed Scheme.
	4.8.4 Using less fuel to generate the same amount of heat and power, reduces emissions, particularly CO2. The government has therefore committed to promoting Good Quality CHP, which denotes CHP that has been certified as highly efficient under the CHP Quality Assurance programme. Schemes need to achieve a specified quality index and power efficiency in order to qualify for government support associated with the programme.	However, as part of the Applicant's on-going of opportunities in relation to heat, the Proposed connect to the proposed Riverside Heat Netwo alongside Riverside 1 and Riverside 2 and the infrastructure for that purpose.
	4.8.5 In 2020, there was 6.1GW of Good Quality CHP in the UK, providing 7.7 per cent of electricity128 and saving an estimated 9.66 Megatonnes CO2 per annum. There is a recognised cost-effective potential for Good Quality CHP to continue to provide benefits due to efficiencies inherent in cogeneration.	
	4.8.6 To be economically viable as a CHP plant, a generating station needs to be located sufficiently close to industrial, non-domestic or domestic customers with heat demands. The distance will vary according to the size and type of the generating station and the nature of the heat demand.	
	4.8.7 For industrial purposes, customers are likely to be intensive heat users such as chemical plants, refineries, or paper mills. CHP can also be used to provide lower grade heat for light industrial users such as commercial greenhouses, or	

Agency's <u>CHP Ready Guidance for</u> <u>Plants (2013)</u> (the 'Guidance'), which combustion plants or 'new Energy from

	more commonly for hot water and space heating, including supply through district heating networks.	
	Applicant Assessment	
	4.8.8 Guidance issued by the then Department for Trade and Industry (DTI) in 2006, will apply to any application to develop a thermal generating station under the Planning Act 2008. Applications for thermal stations must either include CHP proposals or contain evidence demonstrating that the possibilities for CHP have been fully explored to inform the Secretary of State's consideration of the application.	
	4.8.9 In developing proposals for new thermal generating stations, applicants should consider both the current and future opportunities for CHP from the start, and it should be adopted as a criterion when considering locations for a project.	
	4.8.10 Given how important liaison with potential customers for heat is, applicants should not only consult those potential customers they have identified themselves but also Local Authorities, obtaining their advice on opportunities. Further advice is contained in the 2006 DTI guidance and applicants should also consider relevant information in regional and local energy planning and heat demand mapping.	
	4.8.11 Where the applicant is not be able to reach an agreement with a potential customer, they should provide evidence demonstrating the reasons for this, and why it will not be reasonably possible to reach an agreement during the lifetime of the thermal station.	
	4.8.12 Utilisation of useful heat that displaces conventional heat generation from fossil fuel sources is to be encouraged and substantial weight will be given to applications incorporating CHP. If an applicant is putting forward a proposal for thermal generation without CHP they should:	

Page 29 of 262

## Overarching National Policy Statement for Energy (EN-1)

Designated January 2024

Policy	Policy Text	Proposed Scheme Compliance with NPS
	<ul> <li>provide details of any potential future heat requirements in the area that have been considered and the reasons the station could not meet them</li> <li>detail the provisions in the proposed scheme for ensuring any potential heat demand in the future can be exploited, and</li> </ul>	
	<ul> <li>provide an audit trail of dialogue between the applicant, prospective customers, the local area energy teams in local government and district heating energy supply companies</li> </ul>	
	4.8.13 CHP may require additional space than for a non-CHP generating station. It is possible that this might conflict with space required for a generating station to be CCR, as set out in Section 4.9. The material provided by applicants should therefore explain how the development can both be ready to provide CHP in the future, and also be CCR, or set out any constraints (for example space restrictions) which would prevent this.	
	Secretary of State decision making	
	4.8.14 Secretary of State should have regard to the DTI 2006 guidance, or any successor to it, when considering the CHP aspects of applications for thermal generating stations.	
	4.8.15 Given the importance which government attaches to CHP, if an application does not demonstrate that CHP has been adequately considered, the Examining Authority should seek further information from the applicant.	
	4.8.16 The Secretary of State should not give development consent unless satisfied that the applicant has provided appropriate evidence that CHP is included or that the opportunities for CHP have been fully explored.	
	4.8.17 If the Secretary of State (or the Examining Authority during the examination stage) is not satisfied with the evidence that has been provided, the Secretary of	

Page 30 of 262

Designated January 2024		
Policy	Policy Text	Proposed Scheme Compliance with NPS E
	State (or the Examining Authority during the examination stage) may wish to investigate this with one or more of the bodies such as Local Authorities.	
	4.8.18 Furthermore, if the Secretary of State (or the Examining Authority during the examination stage), when considering an application for a thermal generating station, identifies a potential heat customer that is not explored in the application (for instance, on the advice of the Local Authorities), the Secretary of State (or the Examining Authority during the examination stage) should request that the applicant pursues this.	
	4.8.19 The Secretary of State may also be aware of potential developments (for example from the applicant or a third party) which could utilise heat from the plant in the future, for example planned housing, and which is due to be built within a timeframe that would make the supply of heat cost-effective. Where it may be reasonably possible for the applicant to reach agreement with a potential heat customer during the lifetime of the station, the Secretary of State may wish to impose requirements to ensure that the generating station is CHP-ready and designed in order to allow heat supply at a later date.	
	4.8.20 If satisfied that the applicant has demonstrated that the need to comply with the requirement to be CCR will preclude any provision for CHP, the Secretary of State will not impose requirements to ensure that the generating station is CHP- ready.	
Carbon Capture and Storage (CCS) Part 4.9	<b>d</b> 4.9.1 CCS is a technology that enables carbon dioxide that would otherwise be released to the atmosphere to be captured and permanently stored. It can be applied to any large point source of carbon dioxide, such as thermal generating power stations or other industrial processes that are high emitters.	In response to paras 4.9.1 - 4.9.9: When oper provide post-combustion carbon capture techr from Riverside 1 and 95% from Riverside 2, a It is therefore considered by the Applicant that Government's approach to and encouragement out in these paragraphs as its core function is
	<ul> <li>4.9.2 Examples of three types of capture technology are:</li> <li>Pre-combustion capture: this method involves reacting fuel with oxygen or air, and in some cases steam, to produce a gas consisting mainly of carbon monoxide and hydrogen. The carbon monoxide is reacted with more steam in a catalytic shift converter to produce more hydrogen and CO2. The CO2 is then separated, and the hydrogen is used as fuel in a combined cycle gas turbine generating station.</li> </ul>	Although the Proposed Scheme does not invo is noted that <b>Chapter 6: Noise and Vibration</b> <b>Reference 6.1)</b> concludes that no likely signif as a result of the Proposed Scheme.

sideration of this part of the NPS is

Designated January 2024		
Policy	Policy Text	Proposed Scheme Compliance with NPS E
	column and regenerator towers in post-combustion plants can be tall, but the overall size will be dependent on the technology and design.	In light of all the above, the Proposed Sch policy contained within Part 4.9 of EN-1.
	4.9.14 The carbon capture plant will have noise and vibration impacts. Applications for development consent for generating stations with CCS should provide evidence that shows:	
	<ul> <li>a) technically feasible plans for the CO2 capture plant; and</li> <li>b) an ES that addresses impacts arising from the project and documentation to ensure compliance with all other existing policy, including that any of the plant's capacity which is not to be fitted with carbon capture at the outset meets the requirements for Carbon Capture Readiness (CCR).</li> </ul>	
	4.9.15 An Environmental Permit will also be required from the Environment Agency (EA) or Natural Resources Wales (NRW) which incorporates conditions for operation of the carbon capture and storage installation, including limits on pollutant emissions. Section 4.12 provides guidance on the Environmental Permitting regime.	
	4.9.16 There are several different capture techniques which might have slightly different environmental impacts and considerations, which should be set out in the application. For example, some capture technologies may require hazardous substances consent for solvents required during the capture process, such as nitrosamines, and fall under Control of Major Accident Hazards (COMAH) solvents such as nitrosamines. For example, the use of amine-based solvents in some types of post-combustion carbon capture can create degradation products such as nitrosamines which may have impacts on human health and the environment. Best Available Techniques (BAT) guidance, assessment tool Horizontal 1 and Environmental Assessment Levels should be used when understanding impacts from capture solvents. The ES should also reflect the latest research in areas such as amine degradation where understanding is still developing.	
	4.9.17 For example, some capture technologies may require hazardous substances consent for solvents required during the capture process, such as	

cheme is clearly consistent with the

Policy	Policy Text	Proposed Scheme Compliance with NPS E
	nitrosamines, and fall under Control of Major Accident Hazards (COMAH) solvents such as nitrosamines.	
	4.9.18 The chain of CCS has three links: capture of carbon, transport, and storage. Due to the approach of deploying CCS in clusters in the UK with shared transport and storage infrastructure, it is likely that development consent applications for power CCS projects may not include an application for consent for the full CCS chain (including the onward transportation and storage of CO2).	
	4.9.19 However, development consent applications for power CCS projects should include details of how the captured CO2 is intended to be transported and stored, how cumulative impacts will be assessed and whether any necessary consents, permits and licences have been obtained.	
	4.9.20 Applicants gaining consent for CCS infrastructure will need a range of consents from different bodies. One method for transporting captured carbon dioxide is through pipelines located both onshore and offshore. Onshore pipelines over 16.093 kilometres in length classify as NSIPs and require Development Consent Order.	
	4.9.21 Applicants are expected to take into account foreseeable future demand when considering the size and route of their investments. Applicants may therefore propose pipelines with a greater capacity than demand at the time of consenting might suggest.	
	4.9.22 Another method for transporting carbon dioxide is by ship. Ports would enable the transfer of carbon dioxide from onshore infrastructure onto ships. Ports and associated infrastructure that process at least 5Mt of material (including CO2) per year would qualify as NSIP Projects and require a Development Consent Order from the Department for Transport. Such applications would be considered under the National Policy Statement for Ports, but the need for CCS infrastructure set out in this NPS is likely to be a relevant consideration. Port development falling outside of NSIP Projects would likely require a marine licence (see para 4.5.6) and local planning consent.

Climate Change Adaption and Resilience Part 4.10	<ul> <li>4.10.1 Whilst we must continue to accelerate efforts to end our contribution to climate change by reaching Net Zero greenhouse gas emissions, adaptation is also necessary to manage the impacts of current and future climate change. If new energy infrastructure is not sufficiently resilient against the possible impacts of climate change, it will not be able to satisfy the energy needs as outlined in Part 3 of this NPS.</li> <li>4.10.2 Climate change is already altering the UK's weather patterns and this will continue to accelerate depending on global carbon emissions. This means it is likely there will be more extreme weather events. As well as climatic and seasonal changes such as hotter, drier summers and warmer, wetter winters, there is also a likelihood of increased flooding, drought, heatwaves, and intense rainfall events, as well as rising sea levels, increased storms and coastal change. Adaptation is therefore necessary to deal with the potential impacts of these change allowances for flood risk assessments. In addition, the government produces a set of UK Climate Projections National Adaptation Programme. as well as hazard-specific tools and guidance like the Environment Agency's climate change allowances for flood risk assessments. In addition, the government's National Adaptation Programme and Adaptation Reporting Power will ensure that reporting authorities (a defined list of public bodies and statutory undertakers, including energy utilities) assess the risks to their organisation presented by climate change.</li> <li>4.10.4 The generic impacts advice in this NPS and the technology specific advice</li> </ul>	In response to paras 4.10.1 - 4.10.19: Consider climate change has been considered througho of the Proposed Scheme. s that it is resilient to any potential S concludes that with the addition of ects of climate change on the Proposed

Designated January 2024		
Policy	Policy Text	Proposed Scheme Compliance with NPS I
	4.10.10 Applicants should assess the impacts on and from their proposed energy project across a range of climate change scenarios, in line with appropriate expert advice and guidance available at the time.	This demonstrates that the Proposed Sch 1.
	4.10.11 Applicants should demonstrate that proposals have a high level of climate resilience built-in from the outset and should also demonstrate how proposals can be adapted over their predicted lifetimes to remain resilient to a credible maximum climate change scenario. These results should be considered alongside relevant research which is based on the climate change projections.	
	4.10.12 Where energy infrastructure has safety critical elements, the Applicant should apply a credible maximum climate change scenario. It is appropriate to take a risk-averse approach with elements of infrastructure which are critical to the safety of its operation.	
	Secretary of State decision making	
	4.10.13 The Secretary of State should be satisfied that Applicants for new energy infrastructure have taken into account the potential impacts of climate change using the latest UK Climate Projections and associated research and expert guidance (such as the EA's Climate Change Allowances for Flood Risk Assessments or the Welsh Government's Climate change allowances and flood consequence assessments) available at the time the ES was prepared to ensure they have identified appropriate mitigation or adaptation measures. This should cover the estimated lifetime of the new infrastructure, including any decommissioning period.	
	4.10.14 Should a new set of UK Climate Projections or associated research become available after the preparation of the ES, the Secretary of State (or the Examining Authority during the examination stage) should consider whether they need to request further information from the Applicant.	
	4.10.15 The Secretary of State should be satisfied that there are not features of the design of new energy infrastructure critical to its operation which may be	

heme complies with Part 4.10 of EN-

Designated January 2024

Policy	Policy Text	Proposed Scheme Compliance with NPS I
	seriously affected by more radical changes to the climate beyond that projected in the latest set of UK climate projections, taking account of the latest credible scientific evidence on, for example, sea level rise (for example by referring to additional maximum credible scenarios – i.e. from the Intergovernmental Panel on Climate Change or EA) and that necessary action can be taken to ensure the operation of the infrastructure over its estimated lifetime.	
	4.10.16 If any adaptation measures give rise to consequential impacts (for example on flooding, water resources or coastal change) the Secretary of State should consider the impact of the latter in relation to the application as a whole and the impacts guidance set out in Part 5 of this NPS.	
	4.10.17 Any adaptation measures should be based on the latest set of UK Climate Projections, the government's latest UK Climate Change Risk Assessment, when available and in consultation with the EA's Climate Change Allowances for Flood Risk Assessments or the Welsh Government's Climate change allowances and flood consequence assessments.	
	4.10.18 The Secretary of State may take into account reporting authorities' reports (see paragraph 4.10.4 above) to the Secretary of State when considering adaptation measures proposed by an Applicant for new energy infrastructure.	
	4.10.19 Adaptation measures should be required to be implemented at the time of construction where necessary and appropriate to do so. However, where they are necessary to deal with the impact of climate change, and that measure would have an adverse effect on other aspects of the project and/or surrounding environment (for example coastal processes), the Secretary of State may consider requiring the Applicant to keep the need for the adaptation measure under review, and ensure that the measure could be implemented should the need arise, rather than at the outset of the development (for example increasing height of existing, or requiring new, sea walls).

Policy	Policy Text	Proposed Scheme Compliance with NPS E
Network Connection 4.11	4.11.1 The connection of a proposed electricity generation plant to the electricity network is an important consideration for applicants wanting to construct or extend a generation plant.	<u>In response to paras 4.11.1 – 4.11.10:</u> <b>Section</b> (Document Reference 5.3) confirms that the electricity. Power for the Proposed Scheme w Riverside 2.
	4.11.2 In the market system and in the past, it has been for the applicant to ensure that there will be necessary infrastructure and capacity within an existing or planned transmission or distribution network to accommodate the electricity generated.	Part 4.11 of EN-1 is not considered further
	4.11.3 To support the achievement of the transition to net zero, government is accelerating the co-ordination of the development of the grid network to facilitate the UK's net zero energy generation development and transmission.	
	4.11.4 Transmission network infrastructure, and related network reinforcement and upgrade works, associated with nationally significant low carbon infrastructure is considered as CNP Infrastructure. Further guidance can be found in Section 4.2 of this NPS and EN-5.	
	Applicant assessment	
	4.11.5 The applicant must liaise with National Grid who own and manage the transmission network in England and Wales or the relevant regional DNO or TSO to secure a grid connection.	
	4.11.6 Applicants may wish to take a commercial risk where they have not received or accepted a formal offer of a grid connection from the relevant network operator at the time of the application. In this situation applicants should provide information as part of their application confirming that there is no obvious reason why a network connection would not be possible.	
	4.11.7 The Planning Act 2008 aims to create a holistic planning regime so that the cumulative effect of different elements of the same project can be considered together. Co-ordinated applications typically bring economic efficiencies and reduced environmental impact. The government therefore envisages that	

tion 3 of the Planning Statement he Proposed Scheme will not generate will be sourced from Riverside 1 and

er

Designated January 2024

Policy	Policy Text	Proposed Scheme Compliance with NPS E
	wherever reasonably possible, applications for new generating stations and related infrastructure should be contained in a single application to the Secretary of State or in separate applications submitted in tandem which have been prepared in an integrated way, as outlined in EN-5. This is particularly encouraged to ensure development of more co-ordinated transmission overall.	
	4.11.8 On some occasions it may not be possible to coordinate applications. For example, different elements of a project may have different lead-in times and be undertaken by different legal entities subject to different commercial and regulatory frameworks (for example grid companies operate within OFGEM controls) making it inefficient from a delivery perspective to submit one application. Applicants may therefore decide to submit separate applications for each element. Where this is the case, the applicant should include information on the other elements160 and explain the reasons for the separate application confirming that there are no obvious reasons for why other elements are likely to be refused.	
	4.11.9 If this option is pursued, the applicant accepts the implicit risks involved in doing so and must ensure they provide sufficient information to comply with the EIA Regulations including the indirect, secondary, and cumulative effects, which will encompass information on grid connections.	
	4.11.10 It is recognised that this may be the situation for some new offshore transmission projects, where applications for consent may be brought forward separate to (though planned with) the applications for associated wind farms161 as outlined in EN-5.	
	Secretary of State decision making	
	4.11.11 The Secretary of State should consider guidance contained within EN-5.	
	4.11.12 The Secretary of State should be satisfied that appropriate network connection arrangements are/will be in place for a given project regardless of whether one or multiple (linked) applications are submitted.	

Designated January 2024		
Policy	Policy Text	Proposed Scheme Compliance with NPS E
	4.11.13 Where the Secretary of State has decided to grant consent for one project this should not in any way fetter the Secretary of State's ability to take subsequent decisions on any related projects.	
Pollution Control and Other Environmental Regulatory Regimes Part 4.12	<ul> <li>4.12.1 Issues relating to discharges or emissions from a proposed project, and which lead to other direct or indirect impacts on terrestrial, freshwater, marine, onshore, and offshore environments, or which include noise and vibration may be subject to separate regulation under the pollution control framework or other consenting and licensing regimes, for example local planning consent or marine licences (see paragraph 4.4.6 for more information).</li> <li>4.12.2 The planning and pollution control systems are separate but complementary. The planning system controls the development and use of land in the public interest. It plays a key role in protecting and improving the natural environment, public health and safety, and amenity, for example by attaching conditions to allow developments which would otherwise not be environmentally acceptable to proceed and preventing harmful development which cannot be made acceptable even through conditions. Pollution control is concerned with preventing pollution through the use of measures to prohibit or limit the releases of substances to the environment from different sources to the lowest practicable level. It also ensures that ambient air, water, and land quality meet standards that guard against impacts to the environment or human health.</li> </ul>	In response to paras 4.12.1 - 4.12.4: Chapter (Document Reference 6.1) assesses the pote result of the Proposed Scheme. Designated January 2024		
Policy	Policy Text	Proposed Scheme Compliance with NPS E
	4.12.11 The Secretary of State's consent may include a deemed marine licence and the MMO will advise on what conditions should apply to the deemed marine licence.	
	4.12.12 The Secretary of State and the MMO, or NRW, should cooperate closely to ensure that energy NSIPs are licensed in accordance with environmental legislation.	
	4.12.13 In considering the impacts of the project, the Secretary of State may wish to consult the regulator on any management plans that would be included in an Environmental Permit application.	
	4.12.14 The Secretary of State should be satisfied that development consent can be granted taking full account of environmental impacts.	
	4.12.15 Working in close cooperation with the EA or NRW and/or the pollution control authority, and other relevant bodies, such as the MMO, the SNCB, Drainage Boards, and water and sewerage undertakers, the Secretary of State should be satisfied, before consenting any potentially polluting developments, that:	
	<ul> <li>the relevant pollution control authority is satisfied that potential releases can be adequately regulated under the pollution control framework.</li> <li>the effects of existing sources of pollution in and around the site are not such that the cumulative effects of pollution when the proposed development is added would make that development unacceptable, particularly in relation to statutory environmental quality limits.</li> </ul>	
	4.12.16 The Secretary of State should not refuse consent on the basis of pollution impacts unless there is good reason to believe that any relevant necessary operational pollution control permits or licences or other consents will not subsequently be granted. On this basis, it is reasonable for the Secretary of State to consider residual amenity issues only when considering whether the development itself is an acceptable use of the land or sea, and on the impacts of that use.	

Policy	Policy Text	Proposed Scheme Compliance with NPS E
Safety	4.13.1 In addition to its role in the planning system, the HSE is the independent	In response to paras 4.13.1 - 4.13.8: The HSE

Policy	Policy Text	Proposed Scheme Compliance with NPS E
	submitted to the Secretary of State, it will provide confirmation of this to the Secretary of State. The Secretary of State should not need to give any further consideration to the details of the security measures in its examination.	
	4.16.9 In exceptional cases, where examination of an application would involve public disclosure of information about defence or national security which would not be in the national interest, the examination of that evidence may take place in a closed session as set out under Examination Procedure Rules.	
	4.16.10 The Secretary of State must also consider duties under other legislation including duties under the Environment Act 2021 in relation to environmental targets and the Government's Environmental Improvement Plan 2023.	
5 Generic Impacts		
Air Quality and Emissions Part 5.2	5.2.1 Energy infrastructure development can have adverse effects on air quality. The construction, operation and decommissioning phases can involve emissions to air which could lead to adverse impacts on health, on protected species and habitats, or on the wider countryside and species. Air emissions include particulate matter (for example dust) up to a diameter of ten microns (PM10) and up to a diameter of 2.5 microns (PM2.5) as well as gases such as sulphur dioxide, carbon monoxide and nitrogen oxides (NOx).	In response to paras 5.2.1 – 5.2.19: The ES ( considered the impacts of the Proposed Sche Chapter 4: EIA Methodology (Volume 1) of Chapter 5: Air Quality (Volume 1) of the ES assesses the potential impacts on air quality This is in light of the fact that the Proposed S sensitive receptor site.
	5.2.2 Legal limits for pollutants in ambient air are set out in the Air Quality Standards Regulations 2010 and for England, national objectives set out in the Air Quality (England) Regulations 2000 reiterated in the Air Quality Strategy, or for Wales, the Air Quality (Wales) Regulations 2000 and the Clean Air Plan for Wales In addition, two fine particulate matter (PM2.5) targets were set under the Environment Act 2021 for England – an annual mean concentration target and a population exposure target. Internationally agreed emissions commitments are set in the National Emission Ceilings Regulations 2018 and establish limits for total UK emissions of key pollutants.	The assessment identified that some effects a construction and changes to emissions during appropriate mitigation methods and controls is operation phases of the Proposed Scheme, it residual effect on Air Quality in both phases is for construction dust impacts is included with <b>Reference 7.4)</b> for the Proposed Scheme an Schedule 2 of the <b>Draft DCO (Document Re</b> are secured through the parameters secured <b>Reference 3.1)</b> and through the proposed Er also sets out the air quality baseline and relative result of the Proposed Scheme, as well as the

The assessment lative changes in concentrations as a result of the Proposed Scheme, as well as the absolute emission levels of the

Designated January 2024

Policy	Policy Text	Proposed Scheme Compliance with NPS EI
	5.2.3 For many air pollutants there is not a threshold below which there is no health impact so it is important that energy infrastructure schemes consider not just how a scheme may impact statutory air quality limits, objectives or targets but also measures to mitigate all emissions in order to minimise human exposure to air pollution, especially for those who are more susceptible to the impacts of poor air quality.	Proposed Scheme with primary mitigation in pl Environment Targets (Fine Particulate Matter) associated Defra guidance. It uses DEFRA, ot its own modelling to assess the impacts set ou <b>2 of the ES (Volume 3) (Document Reference</b>
	5.2.4 In addition, a particular effect of air emissions from some energy infrastructure may be eutrophication, which is the excessive enrichment of nutrients in the environment. Eutrophication from air pollution results mainly from emissions of Nox and ammonia. The main emissions from energy infrastructure are from generating stations. Eutrophication can affect plant growth and functioning, altering the competitive balance of species and thereby damaging biodiversity. In aquatic ecosystems it can cause changes to algal composition and lead to algal blooms, which remove oxygen from the water, adversely affecting plants and fish. The effects on ecosystems can be short term or irreversible and can have a large impact on ecosystem services such as pollination, aesthetic services and water supply.	<ul> <li>The Proposed Development will not lead to a big quality limits, objectives or targets, or affect the achieve compliance.</li> <li>Air quality modelling has been undertaken and compliance with environmental limits, particular products in the flue gas.</li> <li>In respect of cumulative impact, <b>Chapter 21: Optimize to a compliance tot a compliance to a compliance to a compliance to a comp</b></li></ul>
	5.2.5 Operational emissions from combustion plant are controlled through Environmental Permits. The relationship between environmental permitting and planning systems is set out in Section 4.12. Emissions from combustion plants are generally released through exhaust stacks. Design of exhaust stacks, particularly height, is the primary driver for the delivery of optimal dispersion of emissions and is often determined by statutory requirements. The optimal stack height is dependent upon the local terrain and meteorological conditions, in combination with the emission characteristics of the plant. The EA or NRW will require the exhaust stack height of a thermal combustion generating plant, including fossil fuel generating stations and waste or biomass plant, to be optimised in relation to impact on air quality. The Secretary of State need not, therefore, be concerned with the exhaust stack height optimisation process in relation to air emissions, though the impact of stack heights on landscape and visual amenity will be a consideration (see Section 5.10).	This demonstrates that the Proposed Sche
	5.2.6 Impacts of thermal combustion generating stations with respect to air emissions are set out in the technology specific NPSs.

des that the Proposed Scheme is not e effects on air quality as a result of inojects.

heme complies with Part 5.2 of EN-1.

Policy	Policy Text	Proposed Scheme Compliance with NPS EN
	5.2.7 Proximity to emission sources can have significant impacts on sensitive receptor sites for air quality, such as education or healthcare sites, residential use or sensitive or protected ecosystems. Projects near a sensitive receptor site for air quality should only be proposed in exceptional circumstances if no viable alternative site is available. In these instances, substantial mitigation of any expected emissions will be required (see paragraph 5.2.12 below).	
	Applicant assessment	
	5.2.8 Where the project is likely to have adverse effects on air quality the Applicant should undertake an assessment of the impacts of the proposed project as part of the ES.	
	5.2.9 The ES should describe:	
	<ul> <li>existing air quality concentrations and the relative change in air quality from existing levels;</li> <li>any significant air quality effects, mitigation and any residual effects distinguishing between the project stages and taking account of any significant emissions from any road traffic generated by the project;</li> <li>the predicted absolute emissions, concentration change and absolute concentrations as a result of the proposed project, after mitigation methods have been applied; and</li> <li>any potential eutrophication impacts.</li> </ul>	
	5.2.10 In addition, Applicants should consider the Environment Targets (Fine Particulate Matter) (England) Regulations 2022 and associated Defra guidance.	
	5.2.11 Defra publishes future national projections of air quality based on estimates of future levels of emissions, traffic, and vehicle fleet. Projections are updated as the evidence base changes and the Applicant should ensure these are current at the point of an application. The Applicant 's assessment should be consistent with this but may include more detailed modelling and evaluation to demonstrate local and national impacts. If an Applicant believes they have robust additional	

Page 52 of 262

Policy	Policy Text	Proposed Scheme Compliance with NPS E
	assessment, they should include this in their representations to the Examining Authority along with the source.	
	5.2.12 Where a proposed development is likely to lead to a breach of any relevant statutory air quality limits, objectives or targets, or affect the ability of a non-compliant area to achieve compliance within the timescales set out in the most recent relevant air quality plan/ strategy at the time of the decision, the Applicant should work with the relevant authorities to secure appropriate mitigation measures to ensure that those statutory limits, objectives or targets are not breached.	
	5.2.13 The Secretary of State should consider whether mitigation measures are needed both for operational and construction emissions over and above any which may form part of the project application. A construction management plan may help codify mitigation at this stage. In doing so the Secretary of State should have regard to the Air Quality Strategy in England, or the Clean Air Plan for Wales in Wales, or any successors to it and should consider relevant advice within Local Air Quality Management guidance and PM2.5 targets guidance.	
	5.2.14 The mitigations identified in Section 5.14 on traffic and transport impacts will help mitigate the effects of air emissions from transport.	
	Secretary of State decision making	
	5.2.15 Many activities involving air emissions are subject to pollution control. The considerations set out in Section 4.12on the interface between planning and pollution control therefore apply. The SoS must also consider duties under other legislation including duties under the Environment Act 2021 in relation to environmental targets and have regard to policies set out in the Government's Environmental Improvement Plan 2023.	
	5.2.16The Secretary of State should give air quality considerations substantial weight where a project would lead to a deterioration in air quality This could for example include where an area breaches any national air quality limits or statutory air quality objectives. However, air quality considerations will also be important	

Designated January 2024		
Policy	Policy Text	Proposed Scheme Compliance with NPS E
	where substantial changes in air quality levels are expected, even if this does not lead to any breaches of or statutory limits, objectives or targets.	
	5.2.17 The Secretary of State should give air quality considerations substantial weight where a project is proposed near a sensitive receptor site, such as an education or healthcare facility, residential use or a sensitive or protected habitat.	
	5.2.18 Where a project is proposed near to a sensitive receptor site for air quality, if the Applicant cannot provide justification for this location, and a suitable mitigation plan, the Secretary of State should refuse consent.	
	5.2.19 In all cases, the Secretary of State must take account of any relevant statutory air quality limits, objectives and targets. If a project will lead to noncompliance with a statutory limit, objective or target the Secretary of State should refuse consent.	
Emissions Part 5.3decarbonisation of the UK economy. The construction, operation a decommissioning of that energy infrastructure will in itself, lead to 5.3.2 In considering this section, Applicants should also have regard	<ul> <li>5.3.1 Significant levels of energy infrastructure development are vital to ensure the decarbonisation of the UK economy. The construction, operation and decommissioning of that energy infrastructure will in itself, lead to GHG emissions.</li> <li>5.3.2 In considering this section, Applicants should also have regard to Part 2 of this NPS, which explains the current policy on climate change and how this NPS</li> </ul>	In response to paras 5.3.1 – 5.3.3: It is predic capture a minimum 95% of carbon emissions EfW plants once operational, equating to app operational. vides an assessment of the likely on greenhouse gases during Scheme would have significant operation. Construction emissions will therefore no significant effects on GHG ion. In addition, the Applicant has vn GHG emissions at all stages of the he **Planning Statement (Document** 

Overarching National Policy Statement for Energy (EN-1) Designated January 2024		
Policy	Policy Text	Proposed Scheme Compliance with NPS E
	<ul> <li>5.3.4 All proposals for energy infrastructure projects should include a GHG assessment as part of their ES (See Section 4.3). This should include:</li> <li>A whole life GHG assessment showing construction, operational and decommissioning GHG impacts, including impacts from change of land use.</li> <li>An explanation of the steps that have been taken to drive down the climate change impacts at each of those stages.</li> <li>Measurement of embodied GHG impact from the construction stage.</li> <li>How reduction in energy demand and consumption during operation has been prioritised in comparison with other measures.</li> <li>How operational emissions have been reduced as much as possible through the application of best available techniques for that type of technology.</li> <li>Calculation of operational energy consumption and associated carbon emissions.</li> <li>Whether and how any residual GHG emissions will be (voluntarily) offset or removed using a recognised framework.</li> <li>Where there are residual emissions, the level of emissions and the impact of those on national and international efforts to limit climate change, both alone and where relevant in combination with other developments at a regional or national level, or sector level, if sectoral targets are developed. Mitigation</li> </ul>	The complete list of mitigations measures emissions is within the Mitigation Schedule (secured through the Outline CoCP (Docume Construction Traffic Management Plan (Document Reference 3.1). Together these measures make up the Applic Strategy, and as such a separate document here in a separate document here is that no significate the construction phase, and overall, the Proposed will result in a net reduction in emissions and outline construction. This demonstrates that the Proposed Schedule (Schedule 1997) and the proposed Schedule 1997) and the proposed Schedule 1997.
	Mitigation	
	5.3.5 A GHG assessment should be used to drive down GHG emissions at every stage of the proposed development and ensure that emissions are minimised as far as possible for the type of technology, taking into account the overall objectives of ensuring our supply of energy always remains secure, reliable and affordable, as we transition to net zero.	
	5.3.6 Applicants should look for opportunities within the proposed development to embed nature-based or technological solutions to mitigate or offset the emissions of construction and decommissioning.	
	5.3.7 Steps taken to minimise and offset emissions should be set out in a GHG Reduction Strategy, secured under the Development Consent Order. The GHG Reduction Strategy should consider the creation and preservation of carbon stores	

# EN-1

mbedded in the design to reduce GHG e (Document Reference 7.8) and are nent Reference 7.4), Framework **Document Reference 7.12)** and other rement in Schedule 2 of the **Draft DCO**

	and sinks including through woodland creation, hedgerow creation and restoration, peatland restoration and through other natural habitats.	
	Secretary of State decision making	
	5.3.8 The Secretary of State must be satisfied that the Applicant has as far as possible assessed the GHG emissions of all stages of the development.	
	5.3.9 The Secretary of State should be content that the Applicant has taken all reasonable steps to reduce the GHG emissions of the construction and decommissioning stage of the development.	
	5.3.10 The Secretary of State should give appropriate weight to projects that embed nature based or technological processes to mitigate or offset the emissions of construction and decommissioning within the proposed development. However, in light of the vital role energy infrastructure plays in the process of economy wide decarbonisation, the Secretary of State must accept that there are likely to be some residual emissions from construction and decommissioning of energy infrastructure.	
	5.3.11 Operational GHG emissions are a significant adverse impact from some types of energy infrastructure which cannot be totally avoided (even with full deployment of CCS technology). Given the characteristics of these and other technologies, as noted in Part 3 of this NPS, and the range of non-planning policies that can be used to decarbonise electricity generation, such as the UK ETS (see Section 2.4), government has determined that operational GHG emissions are not reasons to prohibit the consenting of energy projects or to impose more restrictions on them in the planning policy framework than are set out in the energy NPS (e.g. the CCR requirements). Any carbon assessment will include an assessment of operational GHG emissions, but the policies set out in Part 2, including the UK ETS, can be applied to these emissions.	
	5.3.12 Operational emissions will be addressed in a managed, economy-wide manner, to ensure consistency with carbon budgets, net zero and our international climate commitments. The Secretary of State does not, therefore need to assess	

Designated January 2024		
Policy	Policy Text	Proposed Scheme Compliance with NPS E
	individual applications for planning consent against operational carbon emissions and their contribution to carbon budgets, net zero and our international climate commitments.	
Biodiversity and Geological Conservation Part 5.4	5.4.1 Biodiversity is the variety of life in all its forms and encompasses all species of plants, animals, and fungi, the genetic diversity they contain and the complex ecosystems of which they are a part. Geological conservation relates to the sites that are designated for their geology and/or their geomorphological importance.	In response to Part 5.4: Chapter 7: Terrestria Biodiversity, Chapter 10: Townscape and V 1) of the ES (Document Reference 6.1), and Inform a HRA (Volume 3) of the ES (Docum biodiversity assessments undertaken for the F
	5.4.2 In the 25 Year Environment Plan, the government set out its vision for a quarter-of-a-century action to help the natural work regain and retain good health. A commitment to review the plan every 5 years was set into law in the Environment Act 2021. The Environmental Improvement Plan was published in 2023, which reinforces the intent of the 25 Year Environment Plan and sets out a plan to deliver on its framework and vision. The government's policy for	<b>Chapter 7</b> and <b>Chapter 8</b> of the <b>ES (Docume</b> to terrestrial and marine habitats and species, woodland, ancient trees and regional and loca are relevant).
	biodiversity in England is set out in the Environmental Improvement Plan 2023, the National Pollinator Strategy and the UK Marine Strategy. The aim is to halt overall biodiversity loss in England by 2030 and then reverse loss by 2042, support healthy well-functioning ecosystems and establish coherent ecological networks, with more and better places for nature for the benefit of wildlife and people. This	These chapters conclude no likely significant e the requirements of section 126(7) of the Marin not need to be engaged.
	aim needs to be viewed in the context of the challenge presented by climate change. Healthy, naturally functioning ecosystems and coherent ecological networks will be more resilient and adaptable to climate change effects. Failure to address this challenge will result in significant adverse impact on biodiversity and the ecosystem services it provides. #### heme complies with Part 5.4 of EN-1.

Policy	Policy Text	Proposed Scheme Compliance with NPS E
	those outside England), on protected species and on habitats and other species identified as being of principal importance for the conservation of biodiversity, including irreplaceable habitats.	
	5.4.18 The Applicant should provide environmental information proportionate to the infrastructure where EIA is not required to help the Secretary of State consider thoroughly the potential effects of a proposed project.	
	5.4.19 The Applicant should show how the project has taken advantage of opportunities to conserve and enhance biodiversity and geological conservation interests.	
	5.4.20 Applicants should consider wider ecosystem services and benefits of natural capital when designing enhancement measures.	
	5.4.21 As set out in Section 4.7, the design process should embed opportunities for nature inclusive design. Energy infrastructure projects have the potential to deliver significant benefits and enhancements beyond Biodiversity Net Gain, which result in wider environmental gains (see Section 4.6 on Environmental and Biodiversity Net Gain). The scope of potential gains will be dependent on the type, scale, and location of each project.	
	5.4.22 The design of Energy NSIP proposals will need to consider the movement of mobile / migratory species such as birds, fish and marine and terrestrial mammals and their potential to interact with infrastructure. As energy infrastructure could occur anywhere within England and Wales, both inland and onshore and offshore, the potential to affect mobile and migratory species across the UK and more widely across Europe (transboundary effects) requires consideration, depending on the location of development.	
	5.4.23 Energy projects will need to ensure vessels used by the project follow existing regulations and guidelines to manage ballast water.	

Policy	Policy Text	Proposed Scheme Compliance with NPS El
	Applicant assessment - Habitats Regulations	
	5.4.25 The Applicant should seek the advice of the appropriate SNCB and provide the Secretary of State with such information as the Secretary of State may reasonably require, to determine whether an HRA Appropriate Assessment (AA) is required. Applicants can request and agree 'Evidence Plans' with SNCBs, which is a way to record upfront the information the Applicant needs to supply with its application, so that the HRA can be efficiently carried out. If an AA is required, the Applicant must provide the Secretary of State with such information as may reasonably be required to enable the Secretary of State to conduct the AA. This should include information on any mitigation measures that are proposed to minimise or avoid likely significant effects.	
	5.4.26 If, during the pre-application stage, the SNCB indicate that the proposed development is likely to adversely impact the integrity of habitat sites, the Applicant must include with their application such information as may reasonably be required to assess a potential derogation under the Habitats Regulations.	
	5.4.27 If the SNCB gives such an indication at a later stage in the development consent process, the Applicant must provide this information as soon as is reasonably possible and before the close of the examination. This information must include assessment of alternative solutions, a case for Imperative Reasons of Overriding Public Interest (IROPI) and appropriate environmental compensation.	
	5.4.28 Provision of such information will not be taken as an acceptance of adverse impacts and if an Applicant disputes the likelihood of adverse impacts, it can provide this information as part of its application 'without prejudice' to the Secretary of State's final decision on the impacts of the potential development. If, in these circumstances, an Applicant does not supply information required for the assessment of a potential derogation, there will be no expectation that the Secretary of State will allow the Applicant the opportunity to provide such information following the examination.	

Page 62 of 262

	Overarching National Policy Statement for Energy (EN-1) Designated January 2024	
Policy	Policy Text	Proposed Scheme Compliance with NPS E
	5.4.29 It is vital that Applicants consider the need for compensation as early as possible in the design process as 'retrofitting' compensatory measures will introduce delays and uncertainty to the consenting process.	
	5.4.30 Applicants should work closely at an early stage in the pre-application process with SNCB and Defra/Welsh Government to develop a compensation plan for all protected sites adversely affected by the development. Applicants should engage with the relevant Local Planning Authority at an early stage regarding the proposed location of compensatory measures. Applicants should also take account of any strategic plan level compensation plans in developing project level compensation plans.	
	5.4.31 Before submitting an application, Applicants should seek the views of the SNCB and Defra/Welsh Government as to the suitability, securability and effectiveness of the compensation plan to ensure the development will not hinder the achievement of the conservation objectives for the protected site. In cases where such views are provided, the Applicant should include a copy of this information with the compensation plan in their application for further consideration by the Examining Authority.	
	Applicant assessment – Ancient woodland, ancient trees, veteran trees and other irreplaceable habitats	
	5.4.32 Applicants should include measures to mitigate fully the direct and indirect effects of development on ancient woodland, ancient and veteran trees or other irreplaceable habitats during both construction and operational phase.	
	Applicant assessment – Protection and enhancement of habitats and species	
	5.4.33 Applicants should consider any reasonable opportunities to maximise the restoration, creation, and enhancement of wider biodiversity, and the protection and restoration of the ability of habitats to store or sequester carbon as set out under Section 4.6.	
	5.4.34 Consideration should be given to improvements to, and impacts on, habitats and species in, around and beyond developments, for wider ecosystem	

Designated January 2024

Policy	Policy Text	Proposed Scheme Compliance with NPS
	services and natural capital benefits, beyond those under protection and identified as being of principal importance. This may include considerations and opportunities identified through Local Nature Recovery Strategies, and national goals and targets set through the Environment Act 2021 and the Environmental Improvement Plan 2023.	
	Mitigation	
	5.4.35 Applicants should include appropriate avoidance, mitigation, compensation and enhancement measures as an integral part of the proposed development. In particular, the Applicant should demonstrate that:	
	<ul> <li>during construction, they will seek to ensure that activities will be confined to the minimum areas required for the works.</li> <li>the timing of construction has been planned to avoid or limit disturbance.</li> <li>during construction and operation best practice will be followed to ensure that risk of disturbance or damage to species or habitats is minimised, including as a consequence of transport access arrangements.</li> <li>habitats will, where practicable, be restored after construction works have finished</li> <li>opportunities will be taken to enhance existing habitats rather than replace them, and where practicable, create new habitats of value within the site landscaping proposals. Where habitat creation is required as mitigation, compensation, or enhancement the location and quality will be of key importance. In this regard habitat creation should be focused on areas where the most ecological and ecosystems benefits can be realised.</li> <li>mitigations required as a result of legal protection of habitats or species will be complied with.</li> </ul>	
	5.4.36 Applicants should produce and implement a Biodiversity Management Strategy as part of their development proposals. This could include provision for biodiversity awareness training to employees and contractors so as to avoid unnecessary adverse impacts on biodiversity during the construction and operation stages.	
	5.4.37 In the design of any direct cooling system the locations of the intake and outfall should be sited to avoid or minimise adverse impacts on the receiving waters, including their ecology. There should also be specific measures to	

Page 64 of 262

Policy	Policy Text	Proposed Scheme Compliance with NPS E
	minimise impact to fish and aquatic biota by entrainment and impingement or by excessive heat or biocidal chemicals from discharges to receiving waters.	
	5.4.38 To further minimise any adverse impacts on geodiversity, where appropriate Applicants are encouraged to produce and implement a Geodiversity Management Strategy to preserve and enhance access to geological interest features, as part of relevant development proposals.	
	Secretary of State decision making	
	5.4.39 The government's 25 Year Environment Plan and the Environment Act 2021 mark a step change in ambition for wildlife and the natural environment. The Secretary of State should have regard to the aims and goals of the government's Environmental Improvement Plan 2023, and in Wales the objectives of the Nature Recovery Plan, and any relevant measures and targets, including statutory targets set under the Environment Act or elsewhere.	
	5.4.41 The benefits of nationally significant low carbon energy infrastructure development may include benefits for biodiversity and geological conservation interests and these benefits may outweigh harm to these interests. The Secretary of State may take account of any such net benefit in cases where it can be demonstrated.	
	5.4.42 As a general principle, and subject to the specific policies below, development should, in line with the mitigation hierarchy, aim to avoid significant harm to biodiversity and geological conservation interests, including through consideration of reasonable alternatives (as set out in Section 4.3 above). Where significant harm cannot be avoided, impacts should be mitigated and as a last resort, appropriate compensation measures should be sought.	
	5.4.43 If significant harm to biodiversity resulting from a development cannot be avoided (for example through locating on an alternative site with less harmful impacts), adequately mitigated, or, as a last resort, compensated for, then the Secretary of State will give significant weight to any residual harm.	

Designated January 2024

Policy	Policy Text	Proposed Scheme Compliance with NPS I
	5.4.44 The Secretary of State should consider what appropriate requirements should be attached to any consent and/or in any planning obligations entered into, in order to ensure that any mitigation or biodiversity net gain measures, if offered, are delivered and maintained. Any habitat creation or enhancement delivered including linkages with existing habitats for compensation or biodiversity net gain should generally be maintained for a minimum period of 30 years, or for the lifetime of the project, if longer.	
	5.4.45 The Secretary of State will need to take account of what mitigation measures may have been agreed between the Applicant and the SNCB and the MMO/NRW (where appropriate) .The Secretary of State will also need to consider whether the SNCB or the MMO/NRW has granted or refused, or intends to grant or refuse, any relevant licences, including protected species mitigation licences	
	5.4.46 Development proposals provide many opportunities for building-in beneficial biodiversity or geological features as part of good design. The Secretary of State should give appropriate weight to environmental and biodiversity enhancements, although any weight given to gains provided to meet a legal requirement (for example under the Environment Act 2021) is likely to be limited.	
	5.4.47 When considering proposals, the Secretary of State should maximise such reasonable opportunities in and around developments, using requirements or planning obligations where appropriate. This can help towards delivering biodiversity net gain as part of or in addition to the approach set out at Section 4.6.	
	5.4.48 In taking decisions, the Secretary of State should ensure that appropriate weight is attached to designated sites of international, national, and local importance; protected species; habitats and other species of principal importance for the conservation of biodiversity; and to biodiversity and geological interests within the wider environment.	
	Secretary of State decision making – Habitats Regulations	
	5.4.49 The Secretary of State must consider whether the project is likely to have a significant effect on a protected site which is part of the National Site Network (an	

Policy	Policy Text	Proposed Scheme Compliance with NPS E
	habitat site), a protected marine site, or on any site to which the same protection is applied as a matter of policy, either alone or in combination with other plans or projects.	
	Secretary of State decision making – Sites of Special Scientific Interest (SSSIs)	
	5.4.50 The Secretary of State should use requirements and/or planning obligations to mitigate the harmful aspects of the development and, where possible, to ensure the conservation and enhancement of the site's biodiversity or geological interest.	
	Secretary of State decision making – Marine Conservation Zones	
	5.4.51 The Secretary of State is bound by the duties on public authorities in relation to MCZs imposed by sections 125 and 126 of the Marine and Coastal Access Act 2009.	
	Secretary of State decision making – Regional and Local Sites	
	5.4.52 The Secretary of State should give due consideration to regional or local designations. However, given the need for new nationally significant infrastructure, these designations should not be used in themselves to refuse development consent.	
	Secretary of State decision making – Ancient woodland, ancient trees, veteran trees and other irreplaceable habitats	
	5.4.53The Secretary of State should not grant development consent for any development that would result in the loss or deterioration of any irreplaceable habitats, including ancient woodland, and ancient and veteran trees unless there are wholly exceptional reasons and a suitable compensation strategy exists.	
	Secretary of State decision making – Protection and enhancement of habitats and species	
	5.4.54The Secretary of State should ensure that species and habitats identified as being of importance for the conservation of biodiversity are protected from the	

Page 67 of 262

Designated January 2024		
Policy	Policy Text	Proposed Scheme Compliance with NPS E
	adverse effects of development by using requirements, planning obligations, or licence conditions where appropriate.	
	5.4.55 The Secretary of State should refuse consent where harm to a protected species and relevant habitat would result, unless there is an overriding public interest and the other relevant legal tests are met. In this context the Secretary of State should give substantial weight to any such harm to the detriment of biodiversity features of national or regional importance or the climate resilience and the capacity of habitats to store carbon, which it considers may result from a proposed development.	
Civil and Military Aviation and Defence Interests Part 5.5	5.5.1 All aerodromes, covering civil and military activities, as well as aviation technical sites, meteorological radars, and other types of defence interests (both onshore and offshore) can be affected by new energy development.	In response to paras $5.5.1 - 5.5.19$ : No civil a interests are expected to be affected by the P Transport System (NATS), Ministry of Defence (CAA) have been consulted on the Proposed
	5.5.2 Collaboration and co-existence between aviation and energy industry stakeholders should strive for scenarios such that neither is unduly compromised.	Consultation Report (Document Reference In response to paras 5.5.20 – 5.5.28: No com
	5.5.3 Alongside defence and other infrastructure, energy infrastructure, such as wind turbines, are an established part of the expected built energy environment, issues such as the cumulative impact, location and increasing geographical spread and height of offshore windfarms, can all potentially have a bearing on aviation safety, defence capabilities and weather warnings and forecasts.	surveillance infrastructure are expected to be addition, <b>Chapter 20: Major Accidents and I</b> ( <b>Document Reference 6.1</b> ) details that the P unlikely to be vulnerable to aviation related ris been scoped out.
	Safeguarding	This demonstrates that the Proposed Sche
	5.5.8 Certain civil aerodromes, and aviation technical sites, selected on the basis of their importance to the national air transport system, are officially safeguarded in order to ensure that their safety and operation are not compromised by new development.	
	5.5.9 A similar official safeguarding system applies to all military aerodromes, defence surveillance sites, and other defence assets.	

I and military aviation and defence Proposed Scheme. The National Air nce (MoD) and Civil Aviation Authority ed Scheme as documented in the **ce 5.1).** 

ommunications, navigation and be affected by the Proposed Scheme. In **d Disasters (Volume 1) of the ES** Proposed Scheme is considered risks and therefore is a matter that has

heme complies with Part 5.5 of EN-1.

Designated January 2024		
Policy	Policy Text	Proposed Scheme Compliance with NPS EN
	5.5.10 Areas of airspace around aerodromes used by aircraft, including taking off or on approach and landing are described as "obstacle limitation surfaces" (OLS). All civil aerodromes licensed by the Civil Aviation Authority (CAA) and all military aerodromes must comply with the OLS. These are defined according to criteria set out in relevant CAA guidance for licensed civil aerodromes and according to MOD criteria, as set by the Military Aviation Authority, which is part of the Defence Safety Authority (DSA), for military aerodromes.	
	5.5.11 Aerodromes that are officially safeguarded will have officially produced plans that show the OLS. Care must be taken to ensure that new developments do not infringe these protected OLS, as these encompass the critical airspace within which key air traffic associated with the aerodrome operates.	
	5.5.12 The CAA's CAP 738 sets out that all licensed aerodromes are required to ensure they have a system in place to safeguard their aerodrome against the growth of obstacles or activities that may present a hazard to aircraft operations.	
	5.5.13 It is considered best practice for the LPA to include the safeguarded area and explanatory notes on its planning 'constraints' plan so that potential Applicants can be aware of the presence of the aerodrome and the extent and nature of the safeguarding relevant to a particular aerodrome. DfT/ODPM Circular 01/2003 provides advice to planning authorities on the official safeguarding of aerodromes and includes a list of the civil aerodromes which are officially safeguarded.	
	5.5.14 The DfT/ODPM Circular 01/2003 and CAA guidance also recommends that the operators of aerodromes which are not officially safeguarded should take steps to protect their aerodrome from the possible effects of development by establishing an agreed consultation procedure between themselves and the LPAs.	
	5.5.15 The certified Safeguarding maps for all aerodromes (both licensed and unlicensed) depicting the OLS and other criteria (for example to minimise "birdstrike" hazards) are deposited with the relevant LPAs.	

Policy	Policy Text	Proposed Scheme Compliance with NPS El
	5.5.16 The CAA makes clear that the responsibility for the safeguarding of General Aviation aerodromes lies with the aerodrome operator.	
	5.5.17 There are also "Public Safety Zones" (PSZs) at the end of runways of the busiest airports in the UK, within which development is restricted to minimise risks to people on the ground in the event of an aircraft accident on take-off or landing. Maps showing the PSZs are deposited with the relevant LPAs. DfT Circular 01/2010 provides advice to local planning authorities on Public Safety Zones.	
	5.5.18 The military Low Flying system covers the whole of the UK and enables low flying activities as low as 75m (mean separation distance). A considerable amount of military flying for training purposes is conducted at as low as 30m in designated Tactical Training Areas (TTAs) in mid Wales, Cumbria, the Scottish Border region and in the Electronic Warfare Range in the Scottish Border area. In addition, military helicopters may operate down to ground level.	
	5.5.19 New energy infrastructure may cause obstructions in Ministry of Defence (MOD) low flying areas. A balance must be struck between defence and energy needs in these areas.	
	5.5.20 Sufficient air training space and space for civil operations will be required and operation around structures such as wind turbines will become increasingly important as the number of these structures increase.	
	Communications, navigation, and surveillance (CNS) infrastructure	
	5.5.21 Safe and efficient operations within UK airspace is dependent upon CNS infrastructure, including radar (often referred to as 'technical sites').	
	5.5.22 Energy infrastructure development may interfere with the operation of CNS systems such as radar. This is a particular problem for wind turbines as they can act as a reflector or diffractor of radio signals upon which Air Traffic Control Services rely (an effect which is particularly likely to arise when large structures, such as wind turbines, are near Communications and Navigation Aids and	

Designated January 2024		
Policy	Policy Text	Proposed Scheme Compliance with NPS EN
	technical sites). Wind turbines may also cause false returns and other technical issues when built in line of sight to radar installations.	
	5.5.23 Windfarms are an integral part of the plan to achieve Net Zero, as well as delivering affordable clean energy to consumers. The government has an official ambition to deliver up to 50GW of offshore wind by 2030 and the Committee on Climate Change's 6th Carbon Budget (CB6) views offshore wind as the backbone of electricity generation across all its scenarios. The Offshore Wind Sector Deal confirmed that government will work collaboratively with the energy sector and wider stakeholders to address strategic deployment issues including aviation and surveillance systems including radar.	
	5.5.24 Whilst it is hoped that future surveillance technologies will enable civil and military aviation, defence and meteorological surveillance providers and offshore windfarms to meet coexistence challenges, it should not be assumed, however, that there will be sufficient advancement in surveillance technologies to meet all future requirements.	
	5.5.25 Surveillance methods that rely on cooperation alone, such as Automatic Dependent Surveillance – Broadcast (ADS-B) or Secondary Surveillance Radar transponders, are not sufficient to meet the UKs security and national defence requirements nor would they assure the flight safety of air traffic from non-cooperative threats.	
	5.5.26 MOD recognises that the environmental baseline includes existing windfarms and any mitigation solutions that have been established to support them when procuring future radar systems.	
	5.5.27 As existing CNS infrastructure reaches the end of its operational life, replacement options that are more tolerant of wind turbines, if available, should be installed by CNS owners/operators to futureproof aerodromes against possible future turbine installations in order to maintain or enhance aviation safety. This should be considered on a case-by-case basis, so that the correct solution(s) are	

Overarching National Policy Statement for Energy (EN-1) Designated January 2024		
Policy	Policy Text	Proposed Scheme Compliance with NPS E
	identified which strike the balance between surveillance quality/needs and reasonableness of costs being achieved, whilst maintaining safety.	
	5.5.28 Applicants should provide relevant information on proposed developments to enable CNS owners/operators to consider upgrades appropriately.	
Coastal Change Part 5.6	The policies in this section are directed at projects more clearly in coastal locations. However, it is noted that the Applicant has pro ( <b>Appendix 11-4 of the ES Volume 3 (Document Reference 6.3)</b> ) to consider the sediment impacts of dredging associated with the Applicant has provide a sequence of the sediment impacts of dredging associated with the Applicant has provide a sequence of the sediment impacts of dredging associated with the Applicant has provide a sequence of the sediment impacts of dredging associated with the Applicant has provide a sequence of the sediment impacts of dredging associated with the Applicant has provide a sequence of the sediment impacts of dredging associated with the Applicant has provide a sequence of the sediment impacts of dredging associated with the Applicant has provide a sequence of the sediment impacts of dredging associated with the Applicant has provide a sequence of the sediment impacts of dredging associated with the Applicant has provide a sequence of the sediment impacts of dredging associated with the Applicant has provide a sequence of the sediment impacts of dredging associated with the Applicant has provide a sequence of the sediment impacts of dredging associated with the Applicant has provide a sequence of the sediment impacts of dredging associated with the Applicant has provide a sequence of the sediment ha	
	This concludes, that with appropriate mitigation measures in place, no significant in	pacts are predicted to any receptor.
Dust, Odour, Artificial Light, Smoke, Steam, and Insect Infestation Part 5.7	<ul> <li>5.7.1 During the construction, operation and decommissioning of energy infrastructure there is potential for the release of a range of emissions such as odour, dust, steam, smoke, artificial light and infestation of insects. All have the potential to have a detrimental impact on amenity or cause a common law nuisance or statutory nuisance under Part III, Environmental Protection Act 1990. However, they are not regulated by the environmental permitting regime, so mitigation of these impacts will need to be included in the Development Consent Order.</li> </ul>	<u>In response to paras 5.7.1 – 5.7.4</u> : It has been could occur through dust and changes in pollu Some changes in air quality are anticipated du Proposed Scheme with an increase om the en and aldehydes. With controls and mitigation, i Scheme will have any impacts of significance.
	5.7.2 Note that pollution impacts from some of these emissions (for example dust, smoke) are covered in the Section 5.2 on air emissions. Policy	Policy Text	Proposed Scheme Compliance with NPS El
	Secretary of State decision making	
	5.7.12 The Secretary of State should satisfy itself that:	
	<ul> <li>an assessment of the potential for artificial light, dust, odour, smoke, steam and insect infestation to have a detrimental impact on amenity has been carried out</li> <li>that all reasonable steps have been taken, and will be taken, to minimise any such detrimental impacts</li> </ul>	
	5.7.13 If development consent is granted for a project, the Secretary of State should consider whether there is a justification for all of the authorised project (including any associated development) to be covered by a defence of statutory authority against nuisance claims. If the Secretary of State cannot conclude that this is justified, the Secretary of State should disapply in whole or in part the defence through a provision in the development consent order.	
	5.7.14 Where the Secretary of State believes it appropriate, the Secretary of State may consider attaching requirements to the development consent, to secure certain mitigation measures.	
	5.7.15 In particular, the Secretary of State should consider whether to require the Applicant to abide by a scheme of management and mitigation concerning insect infestation and emissions of odour, dust, steam, smoke, and artificial light from the development. The Secretary of State should consider the need for such a scheme to reduce any loss to amenity which might arise during the construction, operation and decommissioning of the development. A construction management plan may help codify mitigation at that stage.	
Flood Risk Part 5.8	5.8.1 Flooding is a natural process that plays an important role in shaping the natural environment. However, flooding threatens life and causes substantial disruption and damage to property.	Initial assessments of groundwater and surface geomorphology and flood risk have been carrie potential significant effects associated with the Proposed Scheme on potentially sensitive rece
	5.8.2 The effects of weather events on the natural environment, life and property can be increased in severity both as a consequence of decisions about the	

ace water quality and resource, fluvial arried out in order to identify the the construction and operation of the eceptors.

Designated January 2024

Policy	Policy Text	Proposed Scheme Compliance with NPS E
	location, design and nature of settlement and land use, and as a potential consequence of future climate change. Having resilient energy infrastructure not only reduces the risk of flood damages to the infrastructure, it also reduces the disruptive impacts of flooding on those homes and businesses that rely on that infrastructure. Although flooding cannot be wholly prevented, its adverse impacts can be avoided or reduced through good planning and management.	The Flood Zones are shown in <b>Figure 2-2: En</b> <b>Flood Zones (Volume 2) of the ES (Docume</b> are Flood Defence Owner maintained flood de Thames, parts of which are within the Site. The reduction in local flood risk.
	5.8.3 The government's Flood and Coastal Erosion Risk Management Policy Statement sets out our ambition to create a nation more resilient to future flood and coastal erosion risk. It outlines policies and actions which will accelerate progress to better protect and better prepare the country against flooding and coastal erosion. The industry should consider any updates to government policy and apply updated approaches as a matter of priority.	Appendix 11-2: Flood Risk Assessment (Fl (Document Reference 6.3) has been prepare the NPPF providing a quantitative analysis of has been informed by the Works Plans (Doc supported by the Outline Drainage Strategy discussions with the Environment Agency and
	5.8.4 All buildings in flood risk areas can improve their preparedness to reduce costs and disruption to key public services when a flood happens. Where infrastructure is not better protected as part of a wider community scale flood defence scheme, those who own and run infrastructure sites – whether in public or private hands – are expected to take action to keep water out, minimise the damage if water gets in through flood-resilient materials, and reduce the disruption caused. This includes effective contingency planning to mitigate the impacts of flooding on the delivery of important services.	It concludes that the Proposed Scheme passe flooding, including the Sequential Test, pursua measures, which, alongside the measures in <b>Reference 7.4)</b> and the <b>Outline Emergency</b> (Document Reference 7.11) (dealing with flo secured by DCO Requirement. An <b>Outline Drainage Strategy (Document R</b> ensure that foul and surface water drainage h
	5.8.5 Climate change is already having an impact and is expected to have an increasing impact on the UK throughout this century. The UK Climate Projections 2018 show an increased chance of milder, wetter winters and hotter, drier summers in the UK, with more intensive rainfall causing flooding. Sea levels will continue to rise beyond the end of the century, increasing risks to vulnerable coastal communities. Within the lifetime of energy projects, these factors will lead to increased flood risks in areas susceptible to flooding, and to an increased risk of the occurrence of floods in some areas which are not currently thought of as being at risk. A robust approach to flood risk management is a vital element of climate change adaptation; the Applicant and the Secretary of State should take account of the policy on climate change adaptation in Section 4.10.	of design, that it will comply with national and and drainage and will inform spatial planning considers the disposal route for wastewater g Facility (associated with process operation) a <b>Drainage Strategy (Document Reference 7</b> drainage design that will be undertaken at the Proposed Scheme and presented in the detai for approval, as secured through a requireme <b>(Document Reference 3.1).</b>

<b>Overarching National F</b>	Policy Statement for	Energy (EN-1)
-------------------------------	----------------------	---------------

Designated January 2024

Policy	Policy Text	Proposed Scheme Compliance with NPS I
	5.8.6 The aims of planning policy on development and flood risk are to ensure that flood risk from all sources of flooding is taken into account at all stages in the planning process to avoid inappropriate development in areas at risk of flooding, and to steer new development to areas with the lowest risk of flooding.	
	5.8.7 Where new energy infrastructure is, exceptionally, necessary in flood risk areas (for example where there are no reasonably available sites in areas at lower risk), policy aims to make it safe for its lifetime without increasing flood risk elsewhere and, where possible, by reducing flood risk overall. It should also be designed and constructed to remain operational in times of flood.	
	5.8.8 Proposals that aim to facilitate the relocation of existing energy infrastructure from unsustainable locations which are or will be at unacceptable risk of flooding, should be supported where it would result in climate-resilient infrastructure.	
	5.8.9 If, following application of the Sequential Test, it is not possible, (taking into account wider sustainable development objectives), for the project to be located in areas of lower flood risk the Exception Test can be applied, as defined in https://www.gov.uk/guidance/flood-risk-and-coastal-change#table2. The test provides a method of allowing necessary development to go ahead in situations where suitable sites at lower risk of flooding are not available.	
	5.8.10 The Exception Test is only appropriate for use where the Sequential Test alone cannot deliver an acceptable site. It would only be appropriate to move onto the Exception Test when the Sequential Test has identified reasonably available, lower risk sites appropriate for the proposed development where, accounting for wider sustainable development objectives, application of relevant policies would provide a clear reason for refusing development in any alternative locations identified. Examples could include alternative site(s) that are subject to national designations such as landscape, heritage and nature conservation designations, for example Areas of Outstanding Natural Beauty (AONBs), SSSIs and World Heritage Sites (WHS) which would not usually be considered appropriate.	

Page 76 of 262

Designated January 2024

Policy	Policy Text	Proposed Scheme Compliance with NPS E
	5.8.11 Both elements of the Exception Test will have to be satisfied for development to be consented. To pass the Exception Test it should be demonstrated that:	
	<ul> <li>the project would provide wider sustainability benefits to the community that outweigh flood risk; and</li> <li>the project will be safe for its lifetime taking account of the vulnerability of its users, without increasing flood risk elsewhere, and, where possible will reduce flood risk overall.</li> </ul>	
	5.8.12 Development should be designed to ensure there is no increase in flood risk elsewhere, accounting for the predicted impacts of climate change throughout the lifetime of the development. There should be no net loss of floodplain storage and any deflection or constriction of flood flow routes should be safely managed within the site. Mitigation measures should make as much use as possible of natural flood management techniques. Applicant assessment	
	Applicant assessment	
	5.8.13 A site-specific flood risk assessment should be provided for all energy projects in Flood Zones 2 and 3 in England or Zones B and C in Wales. In Flood Zone 1 in England or Zone A in Wales, an assessment should accompany all proposals involving:	
	<ul> <li>sites of 1 hectare or more</li> <li>land which has been identified by the EA or NRW as having critical drainage problems</li> <li>land identified (for example in a local authority strategic flood risk assessment) as being at increased flood risk in future</li> <li>land that may be subject to other sources of flooding (for example surface water)</li> <li>where the EA or NRW, Lead Local Flood Authority, Internal Drainage Board or other body have indicated that there may be drainage problems.</li> </ul>	
	5.8.14 This assessment should identify and assess the risks of all forms of flooding to and from the project and demonstrate how these flood risks will be managed, taking climate change into account.	

Policy	Policy Text	Proposed Scheme Compliance with NPS E
	5.8.15 The minimum requirements for Flood Risk Assessments (FRA) are that they should:	
	<ul> <li>be proportionate to the risk and appropriate to the scale, nature and location of the project; • consider the risk of flooding arising from the project in addition to the risk of flooding to the project;</li> <li>take the impacts of climate change into account, across a range of climate</li> </ul>	
	<ul> <li>scenarios, clearly stating the development lifetime over which the assessment has been made;</li> <li>be undertaken by competent people, as early as possible in the process of preparing the proposal;</li> </ul>	
	<ul> <li>consider both the potential adverse and beneficial effects of flood risk management infrastructure, including raised defences, flow channels, flood storage areas and other artificial features, together with the consequences of their failure and exceedance;</li> </ul>	
	<ul> <li>consider the vulnerability of those using the site, including arrangements for safe access and escape;</li> <li>consider and quantify the different types of flooding (whether from natural and human sources and including joint and cumulative effects) and including joint and cumulative effects and including including including sources and including joint and cumulative effects.</li> </ul>	
	<ul> <li>include information on flood likelihood, speed-of-onset, depth, velocity, hazard and duration;</li> <li>identify and secure opportunities to reduce the causes and impacts of flooding overall, making as much use as possible of natural flood management techniques as part of an integrated approach to flood risk management;</li> </ul>	
	<ul> <li>consider the effects of a range of flooding events including extreme events on people, property, the natural and historic environment and river and coastal processes;</li> </ul>	
	<ul> <li>include the assessment of the remaining (known as 'residual') risk after risk reduction measures have been taken into account and demonstrate that these risks can be safely managed, ensuring people will not be exposed to hazardous flooding;</li> </ul>	
	<ul> <li>consider how the ability of water to soak into the ground may change with development, along with how the proposed layout of the project may affect drainage systems. Information should include:</li> </ul>	
	<ul> <li>Describe the existing surface water drainage arrangements for the site</li> <li>ii. Set out (approximately) the existing rates and volumes of surface</li> <li>water run-off generated by the site. Detail the proposals for restricting</li> <li>discharge rates</li> </ul>	
	iii. Set out proposals for managing and discharging surface water from the site using sustainable drainage systems and accounting for the predicted impacts of climate change. If sustainable drainage systems have been rejected, present clear evidence of why their inclusion would	

Designated January 2024

Policy	Policy Text	Proposed Scheme Compliance with NPS
	<ul> <li>iv. Demonstrate how the hierarchy of drainage options has been followed.</li> <li>v. Explain and justify why the types of SuDS and method of discharge have been selected and why they are considered appropriate.</li> <li>vi. Explain how sustainable drainage systems have been integrated with other aspects of the development such as open space or green infrastructure, so as to ensure an efficient use of the site</li> <li>vii. Describe the multifunctional benefits the sustainable drainage system will provide</li> <li>viii. Set out which opportunities to reduce the causes and impacts of flooding have been identified and included as part of the proposed sustainable drainage system</li> <li>ix. Explain how run-off from the completed development will be prevented from causing an impact elsewhere</li> <li>x. Explain how the sustainable drainage system been designed to facilitate maintenance and, where relevant, adoption. Set out plans for ensuring an acceptable standard of operation and maintenance throughout the lifetime of the development</li> <li>detail those measures that will be included to ensure the development will be safe and remain operational during a flooding event throughout the development is lifetime without increasing flood risk elsewhere;</li> <li>identify and secure opportunities to reduce the causes and impacts of flooding overall during the period of construction; and</li> <li>be supported by appropriate data and information, including historical information on previous events.</li> <li>5.8.16 Further guidance can be found in the Planning Practice Guidance Flood Risk and Coastal Change section which accompanies the NPPF, TAN15 for Wales or successor documents.</li> <li>5.8.17 Development (including construction works) will need to account for any existing watercourses and flood and coastal erosion risk management structures or features, or any land likely to be needed for future structures or features so as to ensure:</li> <li>Access, clearances and sufficient land are retained to enable the</li></ul>	

Page 79 of 262

Designated January 2024

Policy	Policy Text	Proposed Scheme Compliance with NPS I
	5.8.18 Applicants for projects which may be affected by, or may add to, flood risk should arrange pre-application discussions before the official pre-application stage of the NSIP process with the EA or NRW, and, where relevant, other bodies such as Lead Local Flood Authorities, Internal Drainage Boards, sewerage undertakers, navigation authorities, highways authorities and reservoir owners and operators.	
	5.8.19 Such discussions should identify the likelihood and possible extent and nature of the flood risk, help scope the FRA, and identify the information that will be required by the Secretary of State to reach a decision on the application when it is submitted. The Secretary of State should advise Applicants to undertake these steps where they appear necessary but have not yet been addressed.	
	5.8.20 If the EA, NRW or another flood risk management authority has reasonable concerns about the proposal on flood risk grounds, the Applicant should discuss these concerns with the EA or NRW and take all reasonable steps to agree ways in which the proposal might be amended, or additional information provided, which would satisfy the authority's concerns.	
	5.8.21 The Sequential Test ensures that a sequential, risk-based approach is followed to steer new development to areas with the lowest risk of flooding, taking all sources of flood risk and climate change into account. Where it is not possible to locate development in low-risk areas, the Sequential Test should go on to compare reasonably available sites with medium risk areas and then, only where there are no reasonably available sites in low and medium risk areas, within high-risk areas.	
	5.8.22 The technology specific NPS set out some exceptions to the application of the Sequential Test. However, when seeking development consent on a site allocated in a development plan through the application of the Sequential Test, informed by a strategic flood risk assessment, Applicants need not apply the Sequential Test, provided the proposed development is consistent with the use for which the site was allocated and there is no new flood risk information that would have affected the outcome of the test.	

Page 80 of 262

Policy	Policy Text	Proposed Scheme Compliance with NPS E
	5.8.23 Consideration of alternative sites should take account of the policy on alternatives set out in Section 4.3 above. All projects should apply the Sequential Test to locating development within the site.	
	Mitigation	
	5.8.24 To satisfactorily manage flood risk, arrangements are required to manage surface water and the impact of the natural water cycle on people and property.	
	5.8.25 In this NPS, the term SuDS refers to the whole range of sustainable approaches to surface water drainage management including, where appropriate:	
	<ul> <li>source control measures including rainwater recycling and drainage</li> <li>infiltration devices to allow water to soak into the ground, that can include individual soakaways and communal facilities</li> <li>filter strips and swales, which are vegetated features that hold and drain water downhill mimicking natural drainage patterns</li> <li>filter drains and porous pavements to allow rainwater and run-off to infiltrate into permeable material below ground and provide storage if needed</li> <li>basins ponds and tanks to hold excess water after rain and allow controlled discharge that avoids flooding</li> <li>flood routes to carry and direct excess water through developments to minimise the impact of severe rainfall flooding</li> </ul>	
	5.8.26 Site layout and surface water drainage systems should cope with events that exceed the design capacity of the system, so that excess water can be safely stored on or conveyed from the site without adverse impacts.	
	5.8.27 The surface water drainage arrangements for any project should, accounting for the predicted impacts of climate change throughout the development's lifetime, be such that the volumes and peak flow rates of surface water leaving the site are no greater than the rates prior to the proposed project, unless specific off-site arrangements are made and result in the same net effect.	
	5.8.28 It may be necessary to provide surface water storage and infiltration to limit and reduce both the peak rate of discharge from the site and the total volume	

Policy	Policy Text	Proposed Scheme Compliance with NPS E
	discharged from the site. There may be circumstances where it is appropriate for infiltration facilities or attenuation storage to be provided outside the project site, if necessary through the use of a planning obligation.	
	5.8.29 The sequential approach should be applied to the layout and design of the project. Vulnerable aspects of the development should be located on parts of the site at lower risk and residual risk of flooding. Applicants should seek opportunities to use open space for multiple purposes such as amenity, wildlife habitat and flood storage uses. Opportunities should be taken to lower flood risk by reducing the built footprint of previously developed sites and using SuDS.	
	5.8.30 Where a development may result in an increase in flood risk elsewhere through the loss of flood storage, on-site level-for-level compensatory storage, accounting for the predicted impacts of climate change over the lifetime of the development, should be provided.	
	5.8.31 Where it is not possible to provide compensatory storage on site, it may be acceptable to provide it off-site if it is hydraulically and hydrologically linked. Where development may cause the deflection or constriction of flood flow routes, these will need to be safely managed within the site.	
	5.8.32 Where development may contribute to a cumulative increase in flood risk elsewhere, the provision of multifunctional sustainable drainage systems, natural flood management and green infrastructure can also make a valuable contribution to mitigating this risk whilst providing wider benefits.	
	5.8.33 The receipt of and response to warnings of floods is an essential element in the management of the residual risk of flooding. Flood Warning and evacuation plans should be in place for those areas at an identified risk of flooding.	
	5.8.34 The Applicant should take advice from the local authority emergency planning team, emergency services and, where appropriate, from the local resilience forum when producing an evacuation plan for a manned energy project	

Page 82 of 262

Policy	Policy Text	Proposed Scheme Compliance with NPS E
	as part of the FRA. Any emergency planning documents, flood warning and evacuation procedures that are required should be identified in the FRA.	
	5.8.35 Flood resistant and resilient materials and design should be adopted to minimise damage and speed recovery in the event of a flood. Secretary of State decision making	
	Secretary of State decision making	
	5.8.36 In determining an application for development consent, the Secretary of State should be satisfied that where relevant:	
	<ul> <li>the application is supported by an appropriate FRA</li> <li>the Sequential Test has been applied and satisfied as part of site selection</li> <li>a sequential approach has been applied at the site level to minimise risk by directing the most vulnerable uses to areas of lowest flood risk</li> <li>the proposal is in line with any relevant national and local flood risk management strategy</li> <li>SuDS (as required in the next paragraph on National Standards) have been used unless there is clear evidence that their use would be inappropriate</li> <li>in flood risk areas the project is designed and constructed to remain safe and operational during its lifetime, without increasing flood risk elsewhere (subject to the exceptions set out in paragraph 5.8.42)</li> <li>the project includes safe access and escape routes where required, as part of an agreed emergency plan, and that any residual risk can be safely managed over the lifetime of the development</li> <li>land that is likely to be needed for present or future flood risk management infrastructure has been appropriately safeguarded from development to the extent that development would not prevent or hinder its construction, operation or maintenance</li> </ul>	
	5.8.37 For energy projects which have drainage implications, approval for the project's drainage system, including during the construction period, will form part of the development consent issued by the Secretary of State. The Secretary of State will therefore need to be satisfied that the proposed drainage system complies with any National Standards published by Ministers under paragraph 5(1) of Schedule 3 to the Flood and Water Management Act 2010.	

Page 83 of 262

Designated January 2024

Deelginatea calicialy		
Policy	Policy Text	Proposed Scheme Compliance with NPS E
	5.8.38 In addition, the Development Consent Order, or any associated planning obligations, will need to make provision for appropriate operation and maintenance of any SuDS throughout the project's lifetime. Where this is secured through the adoption of any SuDS features, any necessary access rights to property will need to be granted.	
	5.8.39 Where relevant, the Secretary of State should be satisfied that the most appropriate body is being given the responsibility for maintaining any SuDS, taking into account the nature and security of the infrastructure on the proposed site. Responsible bodies could include, for example the landowner, the relevant lead local flood authority or water and sewerage company (through the Ofwat-approved Sewerage Sector Guidance), or another body, such as an Internal Drainage Board.	
	5.8.40 If the EA, NRW or another flood risk management authority continues to have concerns and objects to the grant of development consent on the grounds of flood risk, the Secretary of State can grant consent, but would need to be satisfied before deciding whether or not to do so that all reasonable steps have been taken by the Applicant and the authority to try to resolve the concerns.	
	5.8.42 Exceptionally, where an increase in flood risk elsewhere cannot be avoided or wholly mitigated, the Secretary of State may grant consent if they are satisfied that the increase in present and future flood risk can be mitigated to an acceptable and safe level and taking account of the benefits of, including the need for, nationally significant energy infrastructure as set out in Part 3 above. In any such case the Secretary of State should make clear how, in reaching their decision, they have weighed up the increased flood risk against the benefits of the project, taking account of the nature and degree of the risk, the future impacts on climate change, and advice provided by the EA or NRW and other relevant bodies.	
Historic Environmer Part 5.9	<b>1</b> 5.9.1 The construction, operation and decommissioning of energy infrastructure has the potential to result in adverse impacts on the historic environment above, at and below the surface of the ground.	<u>In response to paras 5.9.1 – 5.9.21:</u> Chapter of the ES (Document Reference 6.1) reports significant environmental effects of the Propos Environment during construction and operatio the impact of the Proposed Scheme against k

Overarching National Policy Statement for Energy (EN-1) Designated January 2024		
Policy	Policy Text	Proposed Scheme Compliance with NPS
	<ul> <li>those that have yet to be formally assessed by the Secretary of State, but which have potential to demonstrate equivalent significance to Scheduled Monuments or Protected Wreck Sites.</li> </ul>	This demonstrates that the Proposed Sch
	5.9.6 Non-designated heritage assets of archaeological interest that are demonstrably of equivalent significance to Scheduled Monuments or Protected Wreck Sites should be considered subject to the policies for designated heritage assets. The absence of designation for such heritage assets does not indicate lower significance or necessarily imply that it is not of national importance.	
	5.9.7 The Secretary of State should also consider the impacts on other non- designated heritage assets (as identified either through the development plan making process by plan-making bodies, including 'local listing', or through the application, examination and decision-making process). This is on the basis of clear evidence that such heritage assets have a significance that merits consideration in that process, even though those assets are of lesser significance than designated heritage assets.	
	5.9.8 Impacts on heritage assets specific to types of infrastructure are included in the technology specific NPS.	
	Applicant assessment	
	5.9.9 The Applicant should undertake an assessment of any likely significant heritage impacts of the proposed development as part of the EIA and describe these along with how the mitigation hierarchy has been applied in the ES (see Section 4.3). This should include consideration of heritage assets above, at, and below the surface of the ground. Consideration will also need to be given to the possible impacts, including cumulative, on the wider historic environment. The assessment should include reference to any historic landscape or seascape character assessment and associated studies as a means of assessing impacts relevant to the proposed project.	
	5.9.10 As part of the ES the Applicant should provide a description of the significance of the heritage assets affected by the proposed development, including any contribution made by their setting. The level of detail should be	

Scheme complies with Part 5.9 of EN-1.

Designated January 2024

Policy	Policy Text	Proposed Scheme Compliance with NPS E
	proportionate to the importance of the heritage assets and no more than is sufficient to understand the potential impact of the proposal on their significance. As a minimum, the Applicant should have consulted the relevant Historic Environment Record (or, where the development is in English or Welsh waters, Historic England or Cadw) and assessed the heritage assets themselves using expertise where necessary according to the proposed development's impact.	
	5.9.11 Where a site on which development is proposed includes, or the available evidence suggests it has the potential to include, heritage assets with an archaeological interest, the Applicant should carry out appropriate desk-based assessment and, where such desk-based research is insufficient to properly assess the interest, a field evaluation. Where proposed development will affect the setting of a heritage asset, accurate representative visualisations may be necessary to explain the impact.	
	5.9.12 The Applicant should ensure that the extent of the impact of the proposed development on the significance of any heritage assets affected can be adequately understood from the application and supporting documents. Studies will be required on those heritage assets affected by noise, vibration, light and indirect impacts, the extent and detail of these studies will be proportionate to the significance of the heritage asset affected.	
	5.9.13 The Applicant is encouraged, where opportunities exist, to prepare proposals which can make a positive contribution to the historic environment, and to consider how their scheme takes account of the significance of heritage assets affected. This can include, where possible:	
	<ul> <li>enhancing, through a range of measures such a sensitive design, the significance of heritage assets or setting affected</li> <li>considering where required the development of archive capacity which could deliver significant public benefits</li> <li>considering how visual or noise impacts can affect heritage assets, and whether there may be opportunities to enhance access to, or interpretation, understanding and appreciation of, the heritage assets affected by the scheme</li> </ul>	

Policy	Policy Text	Proposed Scheme Compliance with NPS E
	5.9.14 Careful consideration in preparing the scheme will be required on whether the impacts on the historic environment will be direct or indirect, temporary, or permanent.	
	5.9.15 Applicant s should look for opportunities for new development within Conservation Areas and World Heritage Sites, and within the setting of heritage assets, to enhance or better reveal their significance. Proposals that preserve those elements of the setting that make a positive contribution to the asset (or which better reveal its significance) should be treated favourably.	
	Mitigation	
	5.9.16 A documentary record of our past is not as valuable as retaining the heritage asset, and therefore the ability to record evidence of the asset should not be a factor in deciding whether such loss should be permitted, and whether or not consent should be given.	
	5.9.17 Where the loss of the whole or part of a heritage asset's significance is justified, the Secretary of State will require the Applicant to record and advance understanding of the significance of the heritage asset before it is lost (wholly or in part). The extent of the requirement should be proportionate to the asset's importance and significance and the impact. The Applicant should be required to publish this evidence and to deposit copies of the reports with the relevant Historic Environmental Record. They should also be required to deposit the archive generated in a local museum or other public repository willing to receive it.	
	5.9.18 Where appropriate, the Secretary of State will impose requirements on the Development Consent Order to ensure that the work is undertaken in a timely manner, in accordance with a written scheme of investigation that complies with the policy in this NPS and which has been agreed in writing with the relevant local authority, and to ensure that the completion of the exercise is properly secured.	
	5.9.19 Where the loss of significance of any heritage asset has been justified by the Applicant on the merits of the new development and the significance of the asset in question, the Secretary of State should consider:	

Policy	Policy Text	Proposed Scheme Compliance with NPS El
	<ul> <li>imposing a requirement in the Development Consent Order</li> <li>requiring the Applicant to enter into an obligation</li> </ul>	
	5.9.20 That will prevent the loss occurring until the relevant part of the development has commenced, or it is reasonably certain that the relevant part of the development is to proceed.	
	5.9.21 Where there is a high probability (based on an adequate assessment) that a development site may include, as yet undiscovered heritage assets with archaeological interest, the Secretary of State will consider requirements to ensure appropriate procedures are in place for the identification and treatment of such assets discovered during construction. Secretary of State decision making	
	Secretary of State decision making	
	5.9.22 In determining applications, the Secretary of State should seek to identify and assess the particular significance of any heritage asset that may be affected by the proposed development, including by development affecting the setting of a heritage asset (including assets whose setting may be affected by the proposed development), taking account of:	
	<ul> <li>relevant information provided with the application and, where applicable, relevant information submitted during the examination of the application</li> <li>any designation records, including those on the National Heritage List for England or included on Cof Cymru for Wales.</li> <li>historic landscape character records</li> <li>the relevant Historic Environment Record(s), and similar sources of information</li> <li>representations made by interested parties during the examination process</li> <li>expert advice, where appropriate, and when the need to understand the significance of the heritage asset demands it</li> </ul>	
	5.9.23 The Secretary of State must also comply with the requirements on listed buildings, conservation areas and scheduled monuments, set out in Regulation 3 of the Infrastructure Planning (Decisions) Regulations 2010.	

Designated January 2024

Policy	Policy Text	Proposed Scheme Compliance with NPS E
	5.9.24 In considering the impact of a proposed development on any heritage assets, the Secretary of State should consider the particular nature of the significance of the heritage assets and the value that they hold for this and future generations. This understanding should be used to avoid or minimise conflict between their conservation and any aspect of the proposal.	
	5.9.25 The Secretary of State should consider the desirability of sustaining and, where appropriate, enhancing the significance of heritage assets, the contribution of their settings and the positive contribution that their conservation can make to sustainable communities, including to their quality of life, their economic vitality, and to the public's enjoyment of these assets.	
	5.9.26 The Secretary of State should also consider the desirability of the new development making a positive contribution to the character and local distinctiveness of the historic environment. The consideration of design should include scale, height, massing, alignment, materials, use and landscaping (for example, screen planting).	
	5.9.27 When considering the impact of a proposed development on the significance of a designated heritage asset, the Secretary of State should give great weight to the asset's conservation. The more important the asset, the greater the weight should be. This is irrespective of whether any potential harm amounts to substantial harm, total loss, or less than substantial harm to its significance.	
	5.9.28 The Secretary of State should give considerable importance and weight to the desirability of preserving all heritage assets. Any harm or loss of significance of a designated heritage asset (from its alteration or destruction, or from development within its setting) should require clear and convincing justification.	F
	5.9.29 Substantial harm to or loss of significance of a grade II Listed Building or a grade II Registered Park or Garden should be exceptional.	
	5.9.30 Substantial harm to or loss of significance of assets of the highest significance, including Scheduled Monuments; Protected Wreck Sites; Registered	

Designated January 2024		
Policy	Policy Text	Proposed Scheme Compliance with NPS E
	Battlefields; grade I and II* Listed Buildings; grade I and II* Registered Parks and Gardens; and World Heritage Sites, should be wholly exceptional.	
	5.9.31 Where the proposed development will lead to substantial harm to (or total loss of significance of) a designated heritage asset the Secretary of State should refuse consent unless it can be demonstrated that the substantial harm to, or loss of, significance is necessary to achieve substantial public benefits that outweigh that harm or loss, or all the following apply:	
	<ul> <li>the nature of the heritage asset prevents all reasonable uses of the site</li> <li>no viable use of the heritage asset itself can be found in the medium term through appropriate marketing that will enable its conservation</li> <li>conservation by grant-funding or some form of not for profit, charitable or public ownership is demonstrably not possible</li> <li>the harm or loss is outweighed by the benefit of bringing the site back into use</li> </ul>	
	5.9.32 Where the proposed development will lead to less than substantial harm to the significance of the designated heritage asset, this harm should be weighed against the public benefits of the proposal, including, where appropriate securing its optimum viable use.	
	5.9.33 In weighing applications that directly or indirectly affect non-designated heritage assets, a balanced judgement will be required having regard to the scale of any harm or loss and the significance of the heritage asset.	
	5.9.34 Not all elements of a Conservation Area or World Heritage Site will necessarily contribute to its significance. Loss of a building (or other element) which makes a positive contribution to the significance of the Conservation Area or World Heritage Site should be treated either as substantial harm or less than substantial harm under paragraph 5.9.29 or less than substantial harm under paragraph 5.9.30, or less than substantial harm under paragraph 5.9.32, as appropriate, considering the relative significance of the element affected and its contribution to the significance of the Conservation Area or World Heritage Site as a whole.	

Policy	Policy Text	Proposed Scheme Compliance with NPS
	5.9.35 Where there is evidence of deliberate neglect of, or damage to, a heritage asset, the Secretary of State should not take its deteriorated state into account in any decision.	
	5.9.36 When considering applications for development affecting the setting of a designated heritage asset, the Secretary of State should give appropriate weight to the desirability of preserving the setting such assets and treat favourably applications that preserve those elements of the setting that make a positive contribution to, or better reveal the significance of, the asset. When considering applications that do not do this, the Secretary of State should give great weight to any negative effects, when weighing them against the wider benefits of the application. The greater the negative impact on the significance of the designated heritage asset, the greater the benefits that will be needed to justify approval.	
Landscape and Visua Part 5.10	<ul> <li>5.10.1 The landscape and visual effects of energy projects will vary on a case by case basis according to the type of development, its location and the landscape setting of the proposed development. In this context, references to landscape should be taken as covering seascape and townscape where appropriate.</li> <li>5.10.2 Among the features which are common to a number of different thermal combustion technologies, cooling towers and exhaust stacks and their plumes have the most obvious impact on landscape and visual amenity. Visual impacts may be not just the physical structures but also visible steam plumes from cooling towers.</li> </ul>	In response to paras 5.10.1 – 5.10.28: The lavisual effects of the Proposed Scheme have <b>Townscape and Visual (Volume 1) of the I</b> considered across the rest of the <b>ES (Docur</b> provides an assessment of the likely significat the townscape character and visual impact d including effects on townscape character, loc amenity.
	5.10.3 Other types of cooling system, for example direct throughput where water is abstracted, used for cooling then returned to source, or air-cooled condensers, will have less visible impacts as the structures are considerably lower than natural draught cooling towers and exhibit no visible steam plumes. Further, modern hybrid cooling systems – for example mechanical draught – do not generally exhibit visible steam plumes except in exceptional adverse weather conditions. These systems are normally considered as the "Best Available Techniques" (BAT). However there may be losses of electricity output owing to the need for energy to operate hybrid cooling or air-cooled condenser systems.	practicable the Proposed Scheme's townsca construction and operation. Methods of mitig and are outlined in the <b>Outline CoCP (Docu</b> <b>LaBARDS (Document Reference 7.9), Des</b> <b>(Document Reference 5.7)</b> and the <b>Design</b> <b>Reference 5.6)</b> to reduce the visual impact of considered features of design and with meas it is still considered that the Proposed Scheme visual effects at a localised level, to the PROV immediate vicinity of the Proposed Scheme, expects.

Overarching National Policy Statement for Energy (EN-1) Designated January 2024		
Policy	Policy Text	Proposed Scheme Compliance with NPS E
	5.10.4 Landscape effects arise not only from the sensitivity of the landscape but also the nature and magnitude of change proposed by the development, whose specific siting and design make the assessment a case-by-case judgement.	Consideration of the lighting design to avoid e adverse effects on the surrounding environme Lighting Strategy (Document Reference 7.3 the Draft DCO (Document Reference 3.1).
	5.10.5 Virtually all nationally significant energy infrastructure projects will have adverse effects on the landscape, but there may also be beneficial landscape character impacts arising from mitigation.	The Applicant considers that the benefits of the the <b>Planning Statement (Document Reference 5.4)</b> ) outweigh landscape and visual.
	5.10.6 Projects need to be designed carefully, taking account of the potential impact on the landscape. Having regard to siting, operational and other relevant constraints the aim should be to minimise harm to the landscape, providing reasonable mitigation where possible and appropriate.	Regarding cumulative impacts, <b>Chapter 21: C</b> <b>the ES (Document Reference 6.1)</b> concludes predicted to result in any significant adverse e result of in-combination effects with other plan
	5.10.7 National Parks, the Broads and AONBs have been confirmed by the government as having the highest status of protection in relation to landscape and natural beauty. Each of these designated areas has specific statutory purposes. Projects should be designed sensitively given the various siting, operational, and other relevant constraints.	This demonstrates that the Proposed Sche 1.
	For development proposals located within designated landscapes the Secretary of State should be satisfied that measures which seek to further purposes of the designation are sufficient, appropriate and proportionate to the type and scale of the development.	
	5.10.8 The duty to seek to further the purposes of nationally designated landscapes also applies when considering applications for projects outside the boundaries of these areas which may have impacts within them. In these locations, projects should be sensitively given the various siting, operational, and other relevant constraints. The Secretary of State should be satisfied that measures which seek to further the purposes of the designation are sufficient, appropriate, and proportionate to the type and scale of the development.

Designated January 2024		
Policy	Policy Text	Proposed Scheme Compliance with NPS E
	5.10.10 Heritage Coasts are defined areas of undeveloped coastline which are managed to conserve their natural beauty and, where appropriate, to improve accessibility for visitors.	
	5.10.11 Development within a Heritage Coast (that is not also a National Park, The Broads or an AONB) is unlikely to be appropriate, unless it is compatible with the natural beauty and special character of the area.	
	5.10.12 Outside nationally designated areas, there are local landscapes that may be highly valued locally. Where a local development document in England or a local development plan in Wales has policies based on landscape or waterscape character assessment, these should be paid particular attention. However, locally valued landscapes should not be used in themselves to refuse consent, as this may unduly restrict acceptable development.	
	5.10.13 All proposed energy infrastructure is likely to have visual effects for many receptors around proposed sites.	
	5.10.14 The Secretary of State will have to judge whether the visual effects on sensitive receptors, such as local residents, and other receptors, such as visitors to the local area, outweigh the benefits of the project.	
	5.10.15 Coastal areas are particularly vulnerable to visual intrusion because of the potential high visibility of development on the foreshore, on the skyline and affecting views along stretches of undeveloped coast.	
	Applicant assessment	
	5.10.16 The Applicant should carry out a landscape and visual impact assessment and report it in the ES, including cumulative effects (see Section 4.3). Several guides have been produced to assist in addressing landscape issues.	
	5.10.17 The landscape and visual assessment should include reference to any landscape character assessment and associated studies as a means of assessing	

Page 94 of 262

Overarching National Policy Statement for Energy (EN-1) Designated January 2024		
Policy	Policy Text	Proposed Scheme Compliance with NPS E
	landscape impacts relevant to the proposed project. The Applicant's assessment should also take account of any relevant policies based on these assessments in local development documents in England and local development plans in Wales.	
	5.10.18 For seascapes, Applicants should consult the Seascape Character Assessment and the Marine Plan Seascape Character Assessments, and any successors to them.	
	5.10.19 The Applicant should consider landscape and visual matters in the early stages of siting and design, where site choices and design principles are being established. This will allow the Applicant to demonstrate in the ES how negative effects have been minimised and opportunities for creating positive benefits or enhancement have been recognised incorporated into the design, delivery and operation of the scheme.	
	5.10.20 The assessment should include the effects on landscape components and character during construction and operation. For projects which may affect a National Park, The Broads or an Areas of Outstanding Natural Beauty the assessment should include effects on the natural beauty and special qualities of these areas'.	
	5.10.21 The assessment should include the visibility and conspicuousness of the project during construction and of the presence and operation of the project and potential impacts on views and visual amenity. This should include light pollution effects, including on dark skies, local amenity, and nature conservation.	
	5.10.22 The assessment should also address the landscape and visual effects of noise and light pollution, and other emissions (see Section 5.2 and Section 5.7), from construction and operational activities on residential amenity and on sensitive locations, receptors and views, how these will be minimised.	
	5.10.23 Applicants are expected to justify BAT for the use of a cooling system that involves visible steam plumes or has a high visible structure, such as a natural	

Page 95 of 262

Designated January 2024		
Policy	Policy Text	Proposed Scheme Compliance with NPS E
	draught cooling tower explaining why the application of modern hybrid cooling technology or other technologies is not reasonably practicable.	
	5.10.24 Applicants should consider how landscapes can be enhanced using landscape management plans, as this will help to enhance environmental assets where they contribute to landscape and townscape quality.	
	5.10.25 In considering visual effects it may be helpful for Applicants to draw attention, in the supporting evidence to their applications, to any examples of existing permitted infrastructure they are aware of with a similar magnitude of impact on equally sensitive receptors. This may assist the Secretary of State in judging the weight they should give to the assessed visual impacts of the proposed development.	
	Mitigation	
	5.10.26 Reducing the scale of a project can help to mitigate the visual and landscape effects of a proposed project. However, reducing the scale or otherwise amending the design of a proposed energy infrastructure project may result in a significant operational constraint and reduction in function - for example, the electricity generation output. There may, however, be exceptional circumstances, where mitigation could have a very significant benefit and warrant a small reduction in function. In these circumstances, the Secretary of State may decide that the benefits of the mitigation to reduce the landscape and/or visual effects outweigh the marginal loss of function.	
	5.10.27 Adverse landscape and visual effects may be minimised through appropriate siting of infrastructure within its development site, and wider setting. The careful consideration of colours and materials, will support the delivery of a well-designed scheme, as will sympathetic landscaping and management of its immediate surroundings.	
	5.10.28 Depending on the topography of the surrounding terrain and areas of population it may be appropriate to undertake landscaping off site. For example,	

Page 96 of 262

Policy	Policy Text	Proposed Scheme Compliance with NPS E
	filling in gaps in existing tree and hedge lines may mitigate the impact when viewed from a more distant vista. Secretary of State decision making	
	Secretary of State decision making	
	5.10.29 The Secretary of State should take into consideration the level of detailed design which the Applicant has provided and is secured in the Development Consent Order, and the extent to which design details are subject to future approvals.	
	5.10.30 The Secretary of State should be satisfied that local authorities will have sufficient design content secured to ensure future consenting will meet landscape, visual and good design objectives.	
	5.10.31 When considering visual impacts of thermal combustion generating stations, the Secretary of State should presume that the adverse impacts would be less if a hybrid or direct cooling system is used. The Secretary of State should therefore expect information in the application justifying BAT for the use of a cooling system that involves visible steam plumes or has a high visible structure, such as a natural draught cooling tower, and be satisfied that the application of modern hybrid cooling technology or other technologies is not reasonably practicable before giving consent to a development with natural draught cooling towers.	
	5.10.32 When considering applications for development within National Parks, the Broads and Areas of Outstanding Natural Beauty the conservation and enhancement of the natural beauty should be given substantial weight by the Secretary of State in deciding on applications for development consent in these areas. The Secretary of State may grant development consent in these areas in exceptional circumstances. Such development should be demonstrated to be in the public interest and consideration of such applications should include an assessment of:	
	<ul> <li>the need for the development, including in terms of national considerations, and the impact of consenting or not consenting it upon the local economy;</li> </ul>	

Page 97 of 262

Designated January 2024

Policy	Policy Text	Proposed Scheme Compliance with NPS E
	<ul> <li>the cost of, and scope for, developing all or part of the development elsewhere outside the designated area or meeting the need for it in some other way, taking account of the policy on alternatives set out in Section 4.3; and</li> <li>any detrimental effect on the environment, the landscape and recreational opportunities, and the extent to which that could be moderated.</li> </ul>	
	5.10.33 For development proposals located within designated landscapes the Secretary of State should be satisfied that measures which seek to further purposes of the designation are sufficient, appropriate and proportionate to the type and scale of the development. The Secretary of State should ensure that any projects consented in these designated areas should be carried out to high environmental standards, including through the application of appropriate requirements where necessary.	
	5.10.34 The duty to seek to further the purposes of nationally designated landscapes also applies when considering applications for projects outside the boundaries of these areas which may have impacts within them. The aim should be to avoid harming the purposes of designation or to minimise adverse effects on designated landscapes, and such projects should be designed sensitively given the various siting, operational, and other relevant constraints. The fact that a proposed project will be visible from within a designated area should not in itself be a reason for the Secretary of State to refuse consent.	
	5.10.35 The scale of energy projects means that they will often be visible across a very wide area The Secretary of State should judge whether any adverse impact on the landscape would be so damaging that it is not offset by the benefits (including need) of the project.	
	5.10.36 In reaching a judgement, the Secretary of State should consider whether any adverse impact is temporary, such as during construction, and/or whether any adverse impact on the landscape will be capable of being reversed in a timescale that the Secretary of State considers reasonable.	

Page 98 of 262

	prejudicing the Green Belt or offer the opportunity for environmental improvement. Applicants should refer to relevant criteria on such developments in Green Belts.	There is no agricultural land within the Site. (Volume 1) of the ES (Document Reference Proposed Scheme on ground and soils through
	5.11.22 Moreover an Applicant may be able to demonstrate that particular energy infrastructure, such as an underground pipeline, may be considered an "engine energy" and reperted as not incomparints in Cross Balt. This is	determines that the Proposed Scheme throu ground or soils.
	"engineering operation" and regarded as not inappropriate in Green Belt. This is provided it preserves the openness of the Green Belt and does not conflict with the purposes of Green Belt designation. It may also be possible for an Applicant to show that the physical characteristics of a proposed overhead line in a particular location would not have so harmful an impact as to conflict with the purposes of Green Belt designation, or with other protections of rural landscape.	This demonstrates that the Proposed Sch 1.
	Mitigation	
	Although in the case of most energy infrastructure there may be little that can be done to mitigate the direct effects of an energy project on the existing use of the proposed site (assuming that some of that use can still be retained post project construction) Applicants should nevertheless seek to minimise these effects and the effects on existing or planned uses near the site by the application of good design principles, including the layout of the project and the protection of soils during construction.	
	5.11.23 Where green infrastructure is affected, the Secretary of State should consider imposing requirements to ensure the functionality and connectivity of the green infrastructure network is maintained in the vicinity of the development and that any necessary works are undertaken, where possible, to mitigate any adverse impact and, where appropriate, to improve that network and other areas of open space including appropriate access to National Trails and other public rights of way and new coastal access routes.	
	5.11.24 The Secretary of State should also consider whether any adverse effect on green infrastructure and other forms of open space is adequately mitigated or compensated by means of any planning obligations, for example exchange land and provide for appropriate management and maintenance agreements. Any exchange land should be at least as good in terms of size, usefulness, attractiveness and quality, and accessibility.	

### S EN-1

e. Chapter 17: Ground and Soils nce 6.1) outlines the impact of the ough its construction phase. It ough construction will have no impact on

#### cheme complies with Part 5.11 of EN-

Overarching National Policy Statement for Energy (EN-1) Designated January 2024		
Policy	Policy Text	Proposed Scheme Compliance with NPS E
	5.11.25 Alternatively, where sections 131 and 132 of the Planning Act 2008 apply, replacement land provided under those sections will need to conform to the requirements of those sections.	
	5.11.26 Existing trees and woodlands should be retained wherever possible. In the EIP, the Government committed to increase the tree canopy and woodland cover to 16.5% of total land area of England by 2050. The Applicant should assess the impacts on, and loss of, all trees and woodlands within the project boundary and develop mitigation measures to minimise adverse impacts and any risk of net deforestation as a result of the scheme. Mitigation may include, but is not limited to, the use of buffers to enhance resilience, improvements to connectivity, and improved woodland management. Where woodland loss is unavoidable, compensation schemes will be required, and the long-term management and maintenance of newly planted trees should be secured.	
	5.11.27 Where a proposed development has an impact upon a Mineral Safeguarding Area (MSA), the Secretary of State should ensure that appropriate mitigation measures have been put in place to safeguard mineral resources.	
	5.11.28 Where a project has a sterilising effect on land use (for example in some cases under transmission lines) there may be scope for this to be mitigated through, for example, using or incorporating the land for nature conservation or wildlife corridors or for parking and storage in employment areas.	
	5.11.29 Public Rights of way, National Trails, and other rights of access to land are important recreational facilities for example for walkers, cyclists and horse riders. The Secretary of State should expect Applicants to take appropriate mitigation measures to address adverse effects on coastal access, National Trails, other rights of way and open access land and, where appropriate, to consider what opportunities there may be to improve or create new access. In considering revisions to an existing right of way, consideration should be given to the use, character, attractiveness, and convenience of the right of way.	

Overarching National Policy Statement for Energy (EN-1) Designated January 2024		
Policy	Policy Text	Proposed Scheme Compliance with NPS
	5.11.30 The Secretary of State should consider whether the mitigation measures put forward by an Applicant are acceptable and whether requirements or other provisions in respect of these measures should be included in any grant of development consent.	
	Secretary of State decision making	
	5.11.31 The Secretary of State should not grant consent for development on existing open space, sports and recreational buildings and land unless an assessment has been undertaken either by the local authority or independently, which has shown the open space or the buildings and land to be surplus to requirements or the Secretary of State determines that the benefits of the project (including need), outweigh the potential loss of such facilities, taking into account any positive proposals made by the Applicant to provide new, improved or compensatory land or facilities.	
	5.11.32 The loss of playing fields should only be allowed where Applicants can demonstrate that they will be replaced with facilities of equivalent or better quantity or quality in a suitable location.	
	5.11.33 The Secretary of State should ensure that Applicants do not site their scheme on the best and most versatile agricultural land without justification. Where schemes are to be sited on best and most versatile agricultural land the Secretary of State should take into account the economic and other benefits of that land. Where development of agricultural land is demonstrated to be necessary, areas of poorer quality land should be preferred to those of a higher quality.	
	5.11.34 In considering the impact on maintaining coastal recreation sites and features, the Secretary of State should expect Applicants to have taken advantage of opportunities to maintain and enhance access to the coast. In doing so the Secretary of State should consider the implications for development of the creation of a continuous signed and managed route around the coast, as provided for in the Marine and Coastal Access Act 2009.	

**Designated January 2024** 

Policy	Policy Text	Proposed Scheme Compliance with NPS I
	5.11.35 When located in the Green Belt, energy infrastructure projects may comprise 'inappropriate development'. Inappropriate development is by definition harmful to the Green Belt. The NPPF makes clear that most new building is inappropriate in Green Belt and should be refused permission unless in very special circumstances.	
	5.11.37 In England, Local Green Spaces may be designated locally in Local Plans and Neighbourhood Plans. These enjoy the same protection as Green Belt in England and the Secretary of State should adopt a similar approach.	
	5.11.36 Green wedges do not convey the same level of permanence of a Green Belt and should be reviewed by the local authority as part of the development plan review process.	
Noise and Vibration Part 5.12	5.12.1 Excessive noise can have wide-ranging impacts on the quality of human life and, health such as annoyance, sleep disturbance, cardiovascular disease and mental ill-health. It can also have an impact on the environment, and the use and enjoyment of areas of value such as quiet places and areas with high landscape quality.	<u>In response to paras 5.12.1 – 5.12.13</u> : <b>Chapt</b> <b>1) of the ES (Document Reference 6.1)</b> rep significant effects of the Proposed Scheme o during construction and operation. The chapt relevant to the Proposed Scheme including N (NPSE) 2010.
	5.12.2 The Government's policy on noise is set out in the Noise Policy Statement for England. It promotes good health and good quality of life through effective noise management. Similar considerations apply to vibration, which can also cause damage to buildings. In this section, in line with current legislation, references to "noise" below apply equally to the assessment of impacts of vibration.	This chapter concludes that construction nois BPM and other specific mitigation measures the <b>Outline CoCP (Document Reference 7.</b> Schedule 2 of the <b>Draft DCO (Document Re</b> working hours. With these measures in place
	5.12.4 Noise resulting from a proposed development can also have adverse impacts on wildlife and biodiversity. Noise effects of the proposed development on ecological receptors should be assessed by the Secretary of State in accordance with the Biodiversity and Geological Conservation section of this NPS at Section 5.4. This should consider underwater noise and vibration especially for marine developments. Underwater noise can be a significant issue in the marine environment, particularly in regard to energy production.	During operation, mitigation measures are renotwithstanding that no likely significant effect Plan will be prepared and secured through a <b>DCO (Document Reference 3.1)</b> prior to the detail the final mitigation measures to demon significant. The DCO requires that noise limit receptors.

**pter 6: Noise and Vibration (Volume** eports the assessment of the likely on noise and vibration on receptors pter also considers the key policies Noise Policy Statement for England

heme complies with Part 5.12 of EN-

Policy	Policy Text	Proposed Scheme Compliance with NPS E
	5.12.7 The nature and extent of the noise assessment should be proportionate to the likely noise impact.	
	5.12.8 Applicants should consider the noise impact of ancillary activities associated with the development, such as increased road and rail traffic movements, or other forms of transportation.	
	5.12.9 Operational noise, with respect to human receptors, should be assessed using the principles of the relevant British Standards and other guidance. Further information on assessment of particular noise sources may be contained in the technology specific NPSs. In particular, for renewables (EN-3) and electricity networks (EN-5) there is assessment guidance for specific features of those technologies. For the prediction, assessment and management of construction noise, reference should be made to any relevant British Standards and other guidance which also give examples of mitigation strategies.	
	5.12.10 Some noise impacts will be controlled through environmental permits and parallel tracking is encouraged where noise impacts determined by an environmental permit interface with planning issues (i.e. physical design and location of development). The Applicant should consult the EA and/or the SNCB, and other relevant bodies, such the MMO or NRW, as necessary, and in particular regarding assessment of noise on protected species or other wildlife. The results of any noise surveys and predictions may inform the ecological assessment. The seasonality of potentially affected species in nearby sites may also need to be considered.	
	5.12.11 In the marine environment, Applicants should consider noise impacts on protected species, as well as other noise sensitive receptors, both at the individual project level and in-combination with other marine activities.	
	5.12.12 Applicants should submit a detailed impact assessment and mitigation plan as part of any development plan, including the use of noise mitigation and noise abatement technologies during construction and operation.	

Overarching National Policy Statement for Energy (EN-1) Designated January 2024		
Policy	Policy Text	Proposed Scheme Compliance with NPS
	<ul> <li>Mitigation</li> <li>5.12.13 The Secretary of State should consider whether mitigation measures are needed both for operational and construction noise over and above any which may form part of the project application. In doing so the Secretary of State may wish to impose mitigation measures. Any such mitigation measures should take account of the NPPF or any successor to it and Planning Practice Guidance on Noise.</li> <li>5.12.14 Mitigation measures may include one or more of the following: <ul> <li>engineering: reducing the noise generated at source and/or containing the noise generated</li> <li>lay-out: where possible, optimising the distance between the source and noise sensitive receptors and/or incorporating good design to minimise noise transmission through the use of screening by natural or purposebuilt barriers, or other buildings</li> <li>administrative: using planning conditions/obligations to restrict activities allowed on the site at certain times and/or specifying permissible noise limits/ noise levels, differentiating as appropriate between different times of day, such as evenings and late at night, and taking into account seasonality of wildlife in nearby designated sites</li> <li>insulation: mitigating the impact on areas likely to be affected by noise including through noise insulation when the impact is on a building.</li> </ul> </li> <li>5.12.15 The project should demonstrate good design through selection of the quietest or most acceptable cost-effective plant available; containment of noise within buildings wherever possible, taking into account any other adverse impacts that such containment might cause (e.g. on landscape and visual impacts; optimisation of plant layout to minimise noise emissions; and, where possible, the use of landscaping, bunds or noise barriers to reduce noise transmission).</li> <li>5.12.16 A development must be undertaken in accordance with statutory requirements for noise. Due regard must be given to the relevant sections of the Noise Policy Statement for E</li></ul>	

Designated January 2024			
Policy	Policy Text	Proposed Scheme Compliance with NPS I	
	Secretary of State decision making		
	5.12.17 The Secretary of State should not grant development consent unless they are satisfied that the proposals will meet the following aims, through the effective management and control of noise:		
	<ul> <li>avoid significant adverse impacts on health and quality of life from noise</li> <li>mitigate and minimise other adverse impacts on health and quality of life from noise</li> <li>where possible, contribute to improvements to health and quality of life through the effective management and control of noise</li> </ul>		
	5.12.18 When preparing the development consent order, the Secretary of State should consider including measurable requirements or specifying the mitigation measures to be put in place to ensure that noise levels do not exceed any limits specified in the development consent. These requirements or mitigation measures may apply to the construction, operation, and decommissioning of the energy infrastructure development.		
Socio-Economic Impacts Part 5.13	5.13.1 The construction, operation and decommissioning of energy infrastructure may have socio-economic impacts at local and regional levels. Parts 2 and 3 of this NPS set out some of the national level socio-economic impacts.	The socioeconomic impact of the Proposed S Economics (Volume 1) of the ES (Docume assessment of the likely significant effects of economics during construction and operation	
	Applicant assessment	indirect, and induced) as a result of the const Scheme has also been assessed. Additionall	
	5.13.2 Where the project is likely to have socio-economic impacts at local or regional levels, the Applicant should undertake and include in their application an assessment of these impacts as part of the ES (see Section 4.3).	be prepared prior to the Proposed Scheme control through a requirement in Schedule 2 of the D	
	5.13.3 The Applicant is strongly encouraged to engage with relevant local authorities during early stages of project development so that the Applicant can gain a better understanding of local or regional issues and opportunities.	The Applicant undertook early engagement we relevant information to inform the socio-economic engagement is set out in the <b>Consultation R</b> and <b>Chapter 15: Socio-Economics (Volume 6.1).</b>	
	5.13.4 The Applicant's assessment should consider all relevant socio-economic impacts, which may include:

#### heme complies with Part 5.14 of EN-

Designated January 2024		
Policy	Policy Text	Proposed Scheme Compliance with NPS E
	5.14.8 The assessment should also consider any possible disruption to services and infrastructure (such as road, rail and airports).	
	5.14.9 If additional transport infrastructure is needed or proposed, it should always include good quality walking, wheeling and cycle routes, and associated facilities (changing/storage etc) needed to enhance active transport provision.	
	5.14.10 Applicants should discuss with network providers the possibility of co- funding by government for any third-party benefits. Guidance has been issued <sup>269</sup> which explains the circumstances where this may be possible, although the government cannot guarantee in advance that funding will be available for any given uncommitted scheme at any specified time.	
	<b>Mitigation</b> 5.14.11 Where mitigation is needed, possible demand management measures	
	<ul> <li>must be considered. This could include identifying opportunities to:</li> <li>reduce the need to travel by consolidating trips,</li> <li>locate development in areas already accessible by active travel and public transport,</li> <li>provide opportunities for shared mobility,</li> <li>re-mode by shifting travel to a sustainable mode that is more beneficial to the network,</li> <li>retime travel outside of the known peak times,</li> <li>reroute to use parts of the network that are less busy.</li> </ul>	
	5.14.12 If feasible and operationally reasonable, such mitigation should be required, before considering requirements for the provision of new inland transport infrastructure to deal with remaining transport impacts. All stages of the project should support and encourage a modal shift of freight from road to more environmentally sustainable alternatives, such as rail, cargo bike, maritime and inland waterways, as well as making appropriate provision for and infrastructure needed to support the use of alternative fuels including charging for electric vehicles.	

Policy	Policy Text	Proposed Scheme Compliance with NP
	5.14.13 Regard should always be given to the needs of freight at all stages in the construction and operation of the development including the need to provide appropriate facilities for HGV drivers as appropriate.	
	5.14.14 The Secretary of State may attach requirements to a consent where there is likely to be substantial HGV traffic that:	
	<ul> <li>control numbers of HGV movements to and from the site in a specified period during its construction and possibly on the routing of such movements</li> <li>make sufficient provision for HGV parking, and associated high quality drive facilities either on the site or at dedicated facilities elsewhere, to support driver welfare, avoid 'overspill' parking on public roads, prolonged queuing on approach roads and uncontrolled on-street HGV parking in normal operating conditions</li> <li>ensure satisfactory arrangements for reasonably foreseeable abnormal disruption, in consultation with network providers and the responsible police force.</li> </ul>	
	5.14.15 The Secretary of State should have regard to the cost-effectiveness of demand management measures compared to new transport infrastructure, as well as the aim to secure more sustainable patterns of transport development when considering mitigation measures.	
	Applicants should consider the DfT policy guidance "Water Preferred Policy Guidelines for the movement of abnormal indivisible loads" when preparing their application.	
	5.14.16 If an Applicant suggests that the costs of meeting any obligations or requirements would make the proposal economically unviable this should not in itself justify the relaxation by the Secretary of State of any obligations or requirements needed to secure the mitigation.	
	Secretary of State decision making	
	5.14.17 A new energy NSIP may give rise to substantial impacts on the surrounding transport infrastructure and the Secretary of State should therefore ensure that the Applicant has sought to mitigate these impacts, including during	

Designated January 2024		
Policy	Policy Text	Proposed Scheme Compliance with NPS E
	the construction phase of the development and by enhancing active, public and shared transport provision and accessibility.	
	5.14.18 Where the proposed mitigation measures are insufficient to reduce the impact on the transport infrastructure to acceptable levels, the Secretary of State should consider requirements to mitigate adverse impacts on transport networks arising from the development, as set out below.	
	5.14.19 Development consent should not be withheld provided that the Applicant is willing to enter into planning obligations for funding new infrastructure or requirements can be imposed to mitigate transport impacts. In this situation the Secretary of State should apply appropriately limited weight to residual effects on the surrounding transport infrastructure.	
	5.14.20 The Secretary of State should only consider refusing development on highways grounds if there would be an unacceptable impact on highway safety, residual cumulative impacts on the road network would be severe, or it does not show how consideration has been given to the provision of adequate active public or shared transport access and provision.	
Resource and Wast Management Part 5.15	<b>e</b> 5.15.1 Government policy on hazardous and non-hazardous waste is intended to protect human health and the environment by producing less waste and by using it as a resource wherever possible. Where this is not possible and disposal is required as a last resort, waste management regulation ensures that waste is disposed of in a way that is least damaging to the environment and to human health.	<u>In response to paras 5.15.5 – 5.13.13:</u> Chap 1) of the ES (Document Reference 6.1) rep significant effects of the Proposed Scheme of generation and disposal, during construction mitigation measures, as set out in the Mitiga 7.8) and secured through the Outline CoCP significant effects on materials and waste are
	5.15.2 Sustainable waste management is implemented through the waste hierarchy, which sets out the priorities that must be applied when managing waste. These are (in order):	construction and operation will be properly ma taken to minimise waste arisings, site arisings the capacity of existing waste management fa be followed to minimise the volume of waste
	<ul> <li>prevention</li> <li>preparing for reuse</li> <li>recycling</li> <li>other recovery, including energy recovery</li> </ul>	

pter 16: Materials and Waste (Volume eports the assessment of the likely on material consumption, waste n and operation. It concludes that with pation Schedule (Document Reference P (Document Reference 7.4), no re anticipated. Waste during the managed, appropriate measures will be igs will not have an adverse effect on a facilities, and the waste hierarchy will e risings sent for disposal.

management of materials and waste oposed Scheme is undertaken in uirements and this will be developed s secured through a requirement in **Reference 3.1)**. Further a Materials I, secured through a requirement in **Reference 3.1)**, prior to construction g for, acquire and monitor materials

# Cumulative Effects (Volume 1) of the

that the Proposed Scheme is not e effects on materials and waste as a ans and projects.

#### heme complies with Part 5.15 of EN-

Policy	Policy Text	Proposed Scheme Compliance with NPS EN
	5.15.10 The Applicant is encouraged to refer to the 'Waste Prevention Programme for England'. Maximising Resources Minimising Waste and 'Towards Zero Waste: Our Waste Strategy for Wales'. and should seek to minimise the volume of waste produced and the volume of waste sent for disposal unless it can be demonstrated that this is the best overall environmental outcome.	
	5.15.11 If the Applicant's assessment includes dredged material, the assessment should also include other uses of such material before disposal to sea, for example through reuse in the construction process.	
	5.15.12 The UK is committed to moving towards a more 'circular economy'. Where possible, Applicants are encouraged to source materials from recycled or reused sources and use low carbon materials, sustainable sources and local suppliers. Construction best practices should be used to ensure that material is reused or recycled onsite where possible.	
	5.15.13 Applicants are also encouraged to use construction best practices in relation to storing materials in an adequate and protected place on site to prevent waste, for example, from damage or vandalism. The use of Building Information Management tools (or similar) to record the materials used in construction can help to reduce waste in future decommissioning of facilities, by identifying materials that can be recycled or reused.	
	Secretary of State decision making	
	5.15.14 The Secretary of State should consider the extent to which the Applicant has proposed an effective system for managing hazardous and non-hazardous waste arising from the construction, operation and decommissioning of the proposed development.	
	5.15.15 The Secretary of State should be satisfied that:	
	<ul> <li>any such waste will be properly managed, both on-site and off-site.</li> <li>the waste from the proposed facility can be dealt with appropriately by the waste infrastructure which is, or is likely to be, available. Such waste</li> </ul>

# Overarching National Policy Statement for Energy (EN-1)

Designated January 2024

Policy	Policy Text	Proposed Scheme Compliance with NPS
	<ul> <li>abstraction rates, proposed new abstraction rates and proposed changes to abstraction rates (including any impact on or use of mains supplies and reference to Abstraction Licensing Strategies) and also demonstrate how proposals minimise the use of water resources and water consumption in the first instance</li> <li>existing physical characteristics of the water environment (including quantity and dynamics of flow) affected by the proposed project and any impact of physical modifications to these characteristics</li> <li>any impacts of the proposed project on water bodies or protected areas (including shellfish protected areas) under the Water Environment (Water Framework Directive) (England and Wales) Regulations 2017 and source protection zones (SPZs) around potable groundwater abstractions</li> <li>how climate change could impact any of the above in the future</li> <li>any cumulative effects</li> </ul>	
	Mitigation	
	5.16.8 The Secretary of State should consider whether mitigation measures are needed over and above any which may form part of the project application. A construction management plan may help codify mitigation at that stage.	
	5.16.9 The risk of impacts on the water environment can be reduced through careful design to facilitate adherence to good pollution control practice. For example, designated areas for storage and unloading, with appropriate drainage facilities, should be clearly marked.	
	5.16.10 The impact on local water resources can be minimised through planning and design for the efficient use of water, including water recycling. If a development needs new water infrastructure, significant supplies or impacts other water supplies, the Applicant should consult with the local water company and the EA or NRW.	
	Secretary of State decision making	
	5.16.11 Activities that discharge to the water environment are subject to pollution control. The considerations set out in Section 4.12 on the interface between planning and pollution control therefore apply. These considerations will also apply in an analogous way to the abstraction licensing regime regulating activities that	

Policy	Policy Text	Proposed Scheme Compliance with NPS El
	take water from the water environment, and to the control regimes relating to works to, and structures in, on, or under controlled waters.	
	5.16.12 The Secretary of State will need to give impacts on the water environment more weight where a project would have an adverse effect on the achievement of the environmental objectives established under the Water Environment (Water Framework Directive) (England and Wales) Regulations 2017.	
	5.16.13 The SoS must also consider duties under other legislation including duties under the Environment Act 2021 in relation to environmental targets and have regard to the policies set out in the Government's Environmental Improvement Plan 2023.	
	5.16.14 The Secretary of State should be satisfied that a proposal has regard to current River Basin Management Plans and meets the requirements of the Water Environment (Water Framework Directive) (England and Wales) Regulations 2017 (including regulation 19). The specific objectives for particular river basins are set out in River Basin Management Plans. The Secretary of State must refuse development consent where a project is likely to cause deterioration of a water body or its failure to achieve good status or good potential, unless the requirements set out in Regulation 19 are met. A project may be approved in the absence of a qualifying Overriding Public Interest test only if there is sufficient certainty that it will not cause deterioration or compromise the achievement of good status or good potential.	
	5.16.15 The Secretary of State should also consider the interactions of the proposed project with other plans such as Water Resources Management Plans and Shoreline Management Plans.	
	5.16.16 The Secretary of State should consider proposals to mitigate adverse effects on the water environment and any enhancement measures put forward by the Applicant and whether appropriate requirements should be attached to any development consent and/or planning obligations are necessary.

#### Table 1-3: Accordance with National Planning Policy Framework

## National Planning Policy Framework

January 2024

Policy	Policy Text	Proposed Scheme Compliance with NPPF
2. Sustainable Development	7. The purpose of the planning system is to contribute to the achievement of sustainable development, including the provision of homes, commercial development, and supporting infrastructure in a sustainable manner. At a very high level, the objective of sustainable development can be summarised as meeting the needs of the present without compromising the ability of future generations to meet their own needs. At a similarly high level, members of the United Nations – including the United Kingdom – have agreed to pursue the 17 Global Goals for Sustainable Development in the period to 2030. These address social progress, economic well-being and environmental protection.	The NPPF sets out the presumption in favour of sustainable dever support economic, social and environmental objectives. <u>In response to paras 8:</u> The <b>Planning Statement (Document Re</b> benefits of the Proposed Scheme. The Applicant has taken into an economic benefits and adverse impacts, at national, regional and <b>Statement (Document Reference 5.4)</b> also sets out the overall p for the Proposed Scheme. The urgent need for the Proposed Sch the UK government's environmental aspirations are also set out in <b>(Document Reference 5.4)</b> .
	8. Achieving sustainable development means that the planning system has three overarching objectives, which are interdependent and need to be pursued in mutually supportive ways (so that opportunities can be taken to secure net gains across each of the different objectives):	In response to para 8a: The Proposed Scheme adheres to the red viability as required within the NPPF. <b>The Funding Statement (D</b> that funding of the Proposed Scheme will not be an impediment to
	a) an economic objective – to help build a strong, responsive and competitive economy, by ensuring that sufficient land of the right types is available in the right places and at the right time to support growth, innovation and improved productivity; and by identifying and coordinating the provision of infrastructure;	In response to para 8b: Chapter 15: Socio-economics (Volume Reference 6.1) provides an assessment of the employment and e Scheme. It is considered that the Proposed Scheme would generat opportunities for employment.
	b) a social objective – to support strong, vibrant and healthy communities, by ensuring that a sufficient number and range of homes can be provided to meet the needs of present and future generations; and by fostering well- designed, beautiful and safe places, with accessible services and open spaces that reflect current and future needs and support communities' health, social and cultural well-being; and	In response to para 8c: The ES Volume 1 (Document Reference environmental impact and any residual impact of the Proposed Sc Alternatives Report (TSAR) (Document Reference 7.6) demon- the mitigation hierarchy and limited impacts to MOL, Accessible C Erith Marshes SINC. Impacts to these aspects are to be mitigated
	c) an environmental objective – to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy.	the measures set out in the <b>Outline LaBARDS (Document Reference 1.1)</b> . the <b>Draft DCO (Document Reference 3.1)</b> . <u>In response to paras 9-11:</u> <b>The Planning Statement (Document</b>
	9. These objectives should be delivered through the preparation and implementation of plans and the application of the policies in this Framework; they are not criteria against which every decision can or	compliance whilst the <b>ES (Document Reference 6.1 - 6.4)</b> asses impact and any residual impact of the Proposed Scheme taking a

## January 2024

Policy	Policy Text	Proposed Scheme Compliance with NPPF
	should be judged. Planning policies and decisions should play an active role in guiding development towards sustainable solutions, but in doing so should take local circumstances into account, to reflect the character, needs and opportunities of each area.	The Proposed Scheme's approach to mitigation is detailed in <b>Ch</b> <b>1) of the ES (Document Reference 6.1)</b> . The Proposed Scheme development by providing the infrastructure necessary to meet n enhancements. The Proposed Scheme would also generate emp positive contribution to socio-economic wellbeing.
	10. So that sustainable development is pursued in a positive way, at the heart of the Framework is a presumption in favour of sustainable development (paragraph 11)	<b>Chapter 16: Materials and Waste (Volume 1) of the ES (Docu</b> the site-won materials will be reused where suitable, to adopt a s management. Waste hierarchy will be followed to manage the wa Sustainable Drainage Systems (SuDS) will be adopted to provide
	The presumption in favour of sustainable development	control from the Proposed Scheme, as detailed in Chapter 2: Sit
	11. Plans and decisions should apply a presumption in favour of sustainable development. For plan-making this means that:	Description (Volume 1) of the ES (Document Reference 6.1).
	a) all plans should promote a sustainable pattern of development that seeks to: meet the development needs of their area; align growth and infrastructure; improve the environment; mitigate climate change (including by making effective use of land in urban areas) and adapt to its effects;	This demonstrates that the Proposed Scheme complies with Development.
	<ul> <li>b) strategic policies should, as a minimum, provide for objectively assessed needs for housing and other uses, as well as any needs that cannot be met within neighbouring areas, unless:</li> </ul>	
	i. the application of policies in this Framework that protect areas or assets of particular importance provides a strong reason for restricting the overall scale, type or distribution of development in the plan area <sup>7</sup> ; or	
	ii. any adverse impacts of doing so would significantly and demonstrably outweigh the benefits, when assessed against the policies in this Framework taken as a whole.	
	For decision-taking this means:	
	<ul> <li>c) approving development proposals that accord with an up-to-date development plan without delay; or</li> </ul>	
	d) where there are no relevant development plan policies, or the policies which are most important for determining the application are out-of-date, granting permission unless:	

Chapter 4: EIA Methodology (Volume me would support sustainable national net zero targets with local mployment opportunities and provide a

**cument Reference 6.1)** describes that a sustainable approach for waste waste produced. Additionally, de an adequate level of pollution **Site and Proposed Scheme** ).

th Policy 2. Sustainable

# January 2024

Policy	Policy Text	Proposed Scheme Compliance with NPPF
	i. the application of policies in this Framework that protect areas or assets of particular importance provides a clear reason for refusing the development proposed; or	
	ii. any adverse impacts of doing so would significantly and demonstrably outweigh the benefits, when assessed against the policies in this Framework taken as a whole.	
	12. The presumption in favour of sustainable development does not change the statutory status of the development plan as the starting point for decision-making. Where a planning application conflicts with an up-to- date development plan (including any neighbourhood plans that form part of the development plan), permission should not usually be granted. Local planning authorities may take decisions that depart from an up-to-date development plan, but only if material considerations in a particular case indicate that the plan should not be followed.	
	13. The application of the presumption has implications for the way communities engage in neighbourhood planning. Neighbourhood plans should support the delivery of strategic policies contained in local plans or spatial development strategies; and should shape and direct development that is outside of these strategic policies.	
	14. In situations where the presumption (at paragraph 11d) applies to applications involving the provision of housing, the adverse impact of allowing development that conflicts with the neighbourhood plan is likely to significantly and demonstrably outweigh the benefits, provided all of the following apply:	
	<ul> <li>a) the neighbourhood plan became part of the development plan five years or less before the date on which the decision is made; and</li> </ul>	
	b) the neighbourhood plan contains policies and allocations to meet its identified housing requirement (see paragraphs 67-68), where that requirement has been identified within five years or less of the date on which the decision is made.	

#### January 2024

Policy	Policy Text	Proposed Scheme Compliance with NPPF
4. Decision- making	38. Local planning authorities should approach decisions on proposed development in a positive and creative way. They should use the full range of planning tools available, including brownfield registers and permission in principle, and work proactively with Applicants to secure developments that will improve the economic, social and environmental conditions of the area. Decision-makers at every level should seek to approve applications for sustainable development where possible.	In response to paras 38 - 46: The Applicant has carried out early on the Proposed Scheme, which included non-statutory consultation involving the local community. Two stages of consultation have be engagement with key stakeholders. Full details of the engagement out, and how feedback has influenced the Proposed Scheme is s (Document Reference 5.1).
	<b>Pre-application engagement and front-loading</b> 39. Early engagement has significant potential to improve the efficiency and effectiveness of the planning application system for all parties. Good	The Applicant has engaged with the local planning authority. Con accordance of the Proposed Scheme with relevant local policies London Plan in this <b>Policy Accordance Tracker (Document Re</b>
	and effectiveness of the planning application system for all parties. Good quality preapplication discussion enables better coordination between public and private resources and improved outcomes for the community.	The <b>Draft DCO (Document Reference 3.1)</b> includes necessary <b>Memorandum (Document Reference 3.2)</b> explains are all releve consented, enforceable, precise, and reasonable in all other resp
	41. The more issues that can be resolved at pre-application stage, including the need to deliver improvements in infrastructure and affordable housing, the greater the benefits. For their role in the planning system to be effective and positive, statutory planning consultees will need to take the same early, pro-active approach, and provide advice in a timely manner throughout the development process. This assists local planning authorities in issuing timely decisions, helping to ensure that Applicants do not experience unnecessary delays and costs.	<u>In response to paras 47 – 58:</u> The <b>Planning Statement (Docum</b> relevant legislation and policy applicable to the Proposed Scheme against this policy context. This demonstrates how the Applicant planning policy, notably the energy NPS, and the extent to which these policies. It also considers other matters which are "importan Secretary of State's determination of this Application including UF change policy, Energy NPS, the National Planning Policy Framew documents.
	42. The participation of other consenting bodies in pre-application discussions should enable early consideration of all the fundamental issues relating to whether a particular development will be acceptable in principle, even where other consents relating to how a development is built or operated are needed at a later stage. Wherever possible, parallel processing of other consents should be encouraged to help speed up the process and resolve any issues as early as possible.	The Applicant has included a number of requirements within Schr ( <b>Document Reference 3.1</b> ) in respect to the detailed design of the construction, operation and decommissioning, in order to approprie effects throughout the lifetime of the scheme.
	43. The right information is crucial to good decision-making, particularly where formal assessments are required (such as Environmental Impact Assessment, Habitats Regulations assessment and flood risk assessment). To avoid delay, Applicants should discuss what information	The <b>ES (Document Reference 6.1 - 6.4)</b> and other documents s (including this <b>Policy Accordance Tracker (Document Referen</b> provide justification for the proposed requirements in Schedule 2 <b>Reference 3.1)</b> .

The requirements are drafted to provide the relevant controls to constructed, operated and is decommissioned in accordance wit that impacts arising from the Proposed Scheme do not give rise out in the <b>FS</b> (Decument Reference 6.1 – 6.4)
	46. Applicants and local planning authorities should consider the potential for voluntary planning performance agreements, where this might achieve a faster and more effective application process. Planning performance agreements are likely to be needed for applications that are particularly	out in the ES (Document Reference 6.1 - 6.4). This demonstrates that the Proposed Scheme complies with
	large or complex to determine.	
	Determining applications	
	47. Planning law requires that applications for planning permission be determined in accordance with the development plan, unless material considerations indicate otherwise. Decisions on applications should be made as quickly as possible, and within statutory timescales unless a longer period has been agreed by the Applicant in writing.	
	48. Local planning authorities may give weight to relevant policies in emerging plans according to:	
	a) the stage of preparation of the emerging plan (the more advanced its preparation, the greater the weight that may be given);	
	b) the extent to which there are unresolved objections to relevant policies (the less significant the unresolved objections, the greater the weight that may be given); and	
	c) the degree of consistency of the relevant policies in the emerging plan to this Framework (the closer the policies in the emerging plan to the policies in the Framework, the greater the weight that may be given).	
	49. However, in the context of the Framework – and in particular the presumption in favour of sustainable development – arguments that an application is premature are unlikely to justify a refusal of planning permission other than in the limited circumstances where both:	
	a) the development proposed is so substantial, or its cumulative effect would be so significant, that to grant permission would undermine the plan-

ith Policy 4. Decision Making.

# January 2024

Policy	Policy Text	Proposed Scheme Compliance with NPPF
	making process by predetermining decisions about the scale, location or phasing of new development that are central to an emerging plan; and	
	b) the emerging plan is at an advanced stage but is not yet formally part of the development plan for the area.	
	50. Refusal of planning permission on grounds of prematurity will seldom be justified where a draft plan has yet to be submitted for examination; or – in the case of a neighbourhood plan – before the end of the local planning authority publicity period on the draft plan. Where planning permission is refused on grounds of prematurity, the local planning authority will need to indicate clearly how granting permission for the development concerned would prejudice the outcome of the plan-making process.	
	Planning conditions and obligations	
	56. Planning conditions should be kept to a minimum and only imposed where they are necessary, relevant to planning and to the development to be permitted, enforceable, precise and reasonable in all other respects. Agreeing conditions early is beneficial to all parties involved in the process and can speed up decision making. Conditions that are required to be discharged before development commences should be avoided, unless there is a clear justification.	
	57. Planning obligations must only be sought where they meet all of the following tests:	
	a) necessary to make the development acceptable in planning terms;	
	b) directly related to the development; and	
	c) fairly and reasonably related in scale and kind to the development.	
	58. Where up-to-date policies have set out the contributions expected from development, planning applications that comply with them should be assumed to be viable. It is up to the Applicant to demonstrate whether particular circumstances justify the need for a viability assessment at the application stage. The weight to be given to a viability assessment is a matter for the decision maker, having regard to all the circumstances in the	

#### January 2024

Policy	Policy Text	Proposed Scheme Compliance with NPPF
	case, including whether the plan and the viability evidence underpinning it is up to date, and any change in site circumstances since the plan was brought into force. All viability assessments, including any undertaken at the plan-making stage, should reflect the recommended approach in national planning guidance, including standardised inputs, and should be made publicly available.	
6. Building a strong, competitive economy	85. Planning policies and decisions should help create the conditions in which businesses can invest, expand and adapt. Significant weight should be placed on the need to support economic growth and productivity, taking into account both local business needs and wider opportunities for development. The approach taken should allow each area to build on its strengths, counter any weaknesses and address the challenges of the future. This is particularly important where Britain can be a global leader in driving innovation, and in areas with high levels of productivity, which should be able to capitalise on their performance and potential.	In response to para 85: It is considered that the Proposed Schemand opportunities for employment. The Applicant has taken into account environmental, social, and expression impacts, at national, regional and local levels. The <b>Planning Stat</b> reports on the likely benefits of the Proposed Scheme. The Plann overall planning balance and policy support for the Proposed Scheme Schemer Proposed Development and its role in contributing to the UK gover is also set out in the <b>Project Benefits Report (Document Refere</b> )
	87. Planning policies and decisions should recognise and address the specific locational requirements of different sectors. This includes making provision for clusters or networks of knowledge and data-driven, creative or high technology industries; and for storage and distribution operations at a variety of scales and in suitably accessible locations.	It is considered that the Proposed Scheme would generate econo employment. <b>Chapter 15: Socio-economics (Volume 1) of the</b> provides an assessment of the employment and economic impact been identified that the Proposed Scheme will create a total net a London during the construction phase per annum, and during the additional 25.8 jobs in Greater London. 	102. Access to a network of high quality open spaces and opportunities for sport and physical activity is important for the health and well-being of communities, and can deliver wider benefits for nature and support efforts to address climate change. Planning policies should be based on robust and up-to-date assessments of the need for open space, sport and recreation facilities (including quantitative or qualitative deficits or surpluses) and opportunities for new provision. Information gained from the assessments should be used to determine what open space, sport and recreational provision is needed, which plans should then seek to accommodate.	<ul> <li>Appendix 19-1: Preliminary Navigational Risk Asses (Document Reference 6.3) for construction and operation management.</li> <li>In response to paras 102 – 106: Chapter 14: Population, Hea ES (Document Reference 6.1) provides an assessment of the Proposed Scheme on existing recreation areas. 	e) patterns of movement, streets, parking and other transport considerations are integral to the design of schemes, and contribute to making high quality places.	This demonstrates that the Proposed Scheme complies w transport.
	109. The planning system should actively manage patterns of growth in support of these objectives. Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, and improve air quality and public health. However, opportunities to maximise sustainable transport solutions will vary between urban and rural areas, and this should be taken into account in both plan-making and decision-making.	

with Policy 8. Promoting healthy and

National Planning Policy Framework January 2024		
Policy	Policy Text	Proposed Scheme Compliance with NPPF
	<ul> <li>111. If setting local parking standards for residential and non-residential development, policies should take into account:</li> <li>a) the accessibility of the development;</li> <li>b) the type, mix and use of development;</li> <li>c) the availability of and opportunities for public transport;</li> <li>d) local car ownership levels; and e) the need to ensure an adequate provision of spaces for charging plug-in and other ultra-low emission</li> </ul>	
	vehicles. 112. Maximum parking standards for residential and non-residential development should only be set where there is a clear and compelling justification that they are necessary for managing the local road network, or for optimising the density of development in city and town centres and other locations that are well served by public transport (in accordance with chapter 11 of this Framework). In town centres, local authorities should seek to improve the quality of parking so that it is convenient, safe and secure, alongside measures to promote accessibility for pedestrians and cyclists.	
	113. Planning policies and decisions should recognise the importance of providing adequate overnight lorry parking facilities, taking into account any local shortages, to reduce the risk of parking in locations that lack proper facilities or could cause a nuisance. Proposals for new or expanded distribution centres should make provision for sufficient lorry parking to cater for their anticipated use.	
	Considering development proposals	
	114. In assessing sites that may be allocated for development in plans, or specific applications for development, it should be ensured that:	
	<ul> <li>a) appropriate opportunities to promote sustainable transport modes can be – or have been – taken up, given the type of development and its location;</li> </ul>	
	<ul> <li>Considering development proposals</li> <li>114. In assessing sites that may be allocated for development in plans, or specific applications for development, it should be ensured that:</li> <li>a) appropriate opportunities to promote sustainable transport modes can be – or have been – taken up, given the type of development and its</li> </ul>

Policy	Policy Text	Proposed Scheme Compliance with NPPF
	b) safe and suitable access to the site can be achieved for all users;	
	c) the design of streets, parking areas, other transport elements and the content of associated standards reflects current national guidance, including the National Design Guide and the National Model Design Code; and	
	d) any significant impacts from the development on the transport network (in terms of capacity and congestion), or on highway safety, can be cost effectively mitigated to an acceptable degree.	
	115. Development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe.	
	116. Within this context, applications for development should:	
	a) give priority first to pedestrian and cycle movements, both within the scheme and with neighbouring areas; and second – so far as possible – to facilitating access to high quality public transport, with layouts that maximise the catchment area for bus or other public transport services, and appropriate facilities that encourage public transport use;	
	<ul> <li>b) address the needs of people with disabilities and reduced mobility in relation to all modes of transport;</li> </ul>	
	c) create places that are safe, secure and attractive – which minimise the scope for conflicts between pedestrians, cyclists and vehicles, avoid unnecessary street clutter, and respond to local character and design standards;	
	d) allow for the efficient delivery of goods, and access by service and emergency vehicles; and	
	e) be designed to enable charging of plug-in and other ultra-low emission vehicles in safe, accessible and convenient locations.	
	117. All developments that will generate significant amounts of movement should be required to provide a travel plan, and the application should be supported by a transport statement or transport assessment so that the	
	supported by a transport statement or transport assessment so that the likely impacts of the proposal can be assessed.	

#### January 2024

Policy	Policy Text	Proposed Scheme Compliance with NPPF
11.Making effective use of land	123. Planning policies and decisions should promote an effective use of land in meeting the need for homes and other uses, while safeguarding and improving the environment and ensuring safe and healthy living conditions. Strategic policies should set out a clear strategy for accommodating objectively assessed needs, in a way that makes as much use as possible of previously-developed or 'brownfield' land.	In response to para 123 - 126: The Applicant has identified that that can be considered as 'public open space' for Planning Act 2 used for recreation purposes. This has been identified as 'Accest <b>(Document Reference 6.1-6.4)</b> and some land that is not accest considers not to be 'public open space' and so is termed 'Non-A open space.
	124. Planning policies and decisions should:	Part of the Non-Accessible Open Land is to be lost to the Propos

	136. Trees make an important contribution to the character and quality of urban environments, and can also help mitigate and adapt to climate change. Planning policies and decisions should ensure that new streets are tree-lined, that opportunities are taken to incorporate trees elsewhere in developments (such as parks and community orchards), that appropriate measures are in place to secure the long-term maintenance of newly- planted trees, and that existing trees are retained wherever possible. Applicants and local planning authorities should work with highways officers and tree officers to ensure that the right trees are planted in the right places, and solutions are found that are compatible with highways standards and the needs of different users.	The <b>Outline LaBARDS (Document Reference 7.9)</b> describes a maintenance measures for the landscaping. <u>In response to para 137:</u> The Applicant carried out early engage Proposed Scheme, which included non-statutory consultation at involving the local community. Engagement with stakeholders a More detail on the engagement and consultation activities carrier influenced the Proposed Scheme can be found in the <b>Consulta 5.1).</b>
	137. Design quality should be considered throughout the evolution and assessment of individual proposals. Early discussion between Applicants, the local planning authority and local community about the design and style of emerging schemes is important for clarifying expectations and reconciling local and commercial interests. Applicants should work closely with those affected by their proposals to evolve designs that take account of the views of the community. Applications that can demonstrate early, proactive and effective engagement with the community should be looked on more favourably than those that cannot.	In response to paras 139 – 141: The <b>Design Approach Docum</b> provides a full account of the design process demonstrating god inform the design. It also provides the basis upon which the info requirements in Schedule 2 of the <b>Draft DCO (Document Refe</b> London Borough of Bexley. The design development process in commitments, both for mitigation embedded in the design and god <b>This demonstrates that the Proposed Scheme complies with</b> <b>designed and beautiful places.</b>
	139. Development that is not well designed should be refused, especially where it fails to reflect local design policies and government guidance on design, taking into account any local design guidance and supplementary

Policy	Policy Text	Proposed Scheme Compliance with NPPF
	planning documents such as design guides and codes. Conversely, significant weight should be given to:	
	a) development which reflects local design policies and government guidance on design, taking into account any local design guidance and supplementary planning documents such as design guides and codes; and/or	
	b) outstanding or innovative designs which promote high levels of sustainability, or help raise the standard of design more generally in an area, so long as they fit in with the overall form and layout of their surroundings.	
	141. The quality and character of places can suffer when advertisements are poorly sited and designed. A separate consent process within the planning system controls the display of advertisements, which should be operated in a way which is simple, efficient and effective. Advertisements should be subject to control only in the interests of amenity and public safety, taking account of cumulative impacts.	
13. Protecting Green Belt land	142. The Government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence.	<u>In response to paras 142 – 143, 152:</u> The Proposed Scheme do fall within Metropolitan Open Land (MOL) which is designated u confirms it is afforded the same status and level of protection as <b>(Document Reference 5.2)</b> comprehensively considers key po Metropolitan Open Land, open space and green infrastructure is
	143. Green Belt serves five purposes:	some net loss and demonstrates both very special circumstance outweigh this limited and local level of harm.
	a) to check the unrestricted sprawl of large built-up areas;	
	b) to prevent neighbouring towns merging into one another;	In respect of both MOL and Open Space, the reasonable altern
	c) to assist in safeguarding the countryside from encroachment;	respect of seeking to avoid impacts to these areas, whilst still se Proposed Scheme are presented in the <b>TSAR (Document Ref</b>
	d) to preserve the setting and special character of historic towns; and	Consideration of Alternatives (Volume 1) of the ES (Docu
	e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.	main reasons for the Applicant's choice, taking into account envelopments and including, where relevant, technical and commercial
	Proposals affecting the Green Belt	In response to paras 153: The <b>Planning Statement (Documen</b> with which the Proposed Scheme aligns with the 'Very Special (

does not fall within Green Belt, it does d under development plan policy that as Green Belt. The **Planning Statement** policy provisions in relation to e in Section 5. It recognises there is nees to justify and material benefits that

rnatives that have been considered in seeking to achieve the objectives for the eference 7.5) and in Chapter 3: ment Reference 6.1) which sets out the environmental, social and economic cial feasibility.

ent Reference 5.2) details the nature al Circumstances' in which Green Belt

	152. Inappropriate development is, by definition, harmful to the Green Belt and should not be approved except in very special circumstances.	development is permitted. The potential impact on MOL land and are also reported in the <b>Design Approach Document (Documer (Document Reference 7.5).</b>
	<ul> <li>153. When considering any planning application, local planning authorities should ensure that substantial weight is given to any harm to the Green Belt. 'Very special circumstances' will not exist unless the potential harm to the Green Belt by reason of inappropriateness, and any other harm resulting from the proposal, is clearly outweighed by other considerations.</li> <li>154. A local planning authority should regard the construction of new buildings as inappropriate in the Green Belt. Exceptions to this are:</li> </ul>	In response to paras 155 – 156: Chapter 14: Population, Health ES (Document Reference 6.1) concludes that the Proposed Sch Adverse (significant) effect during the construction phase on MOL Proposed Scheme. There will be ongoing engagement with users the Mitigation Schedule (Document Reference 7.8) where pose within, or close to, the Order Limits that are currently accessible to construction of the Proposed Scheme and construction works will effects on the amenity value and enjoyment of these areas.
	a) buildings for agriculture and forestry;	
	b) the provision of appropriate facilities (in connection with the existing use of land or a change of use) for outdoor sport, outdoor recreation, cemeteries and burial grounds and allotments; as long as the facilities preserve the openness of the Green Belt and do not conflict with the purposes of including land within it;	Notwithstanding the above, the Applicant considers that the need benefits as set out in the <b>Project Benefits Report (Document Re</b> that are proposed in the <b>Outline LaBARDS (Document Referen</b> to the public, outweigh that small loss of inaccessible MOL.
	c) the extension or alteration of a building provided that it does not result in disproportionate additions over and above the size of the original building;	The 'Very Special Circumstances' detailed in the Planning St 5.2) demonstrate how the Proposed Scheme aligns with Polic
	d) the replacement of a building, provided the new building is in the same use and not materially larger than the one it replaces;	
	e) limited infilling in villages;	
	<ul> <li>f) limited affordable housing for local community needs under policies set out in the development plan (including policies for rural exception sites); and</li> </ul>	
	g) limited infilling or the partial or complete redevelopment of previously developed land, whether redundant or in continuing use (excluding temporary buildings), which would:	
	<ul> <li>not have a greater impact on the openness of the Green Belt than the existing development; or</li> </ul>	
	– not cause substantial harm to the openness of the Green Belt, where the development would re-use previously developed land and contribute to meeting an identified affordable housing need within the area of the local planning authority.	

nd the 'Very Special Circumstances' nent Reference 5.6) and the TSAR

Ith and Land Use (Volume 1) of the Scheme will have a residual Moderate OL as parts of the site will be lost to the ers to mitigate these impacts. As per ossible, those areas of MOL that fall e to the public will remain so during will be screened to minimise adverse

ed for the Proposed Scheme and its **Reference 5.4)** and the improvements **ence 7.9)** to the MOL that is accessible

Statement (Document Reference blicy 13 Protecting Green Belt Land.

January 2024		
Policy	Policy Text	Proposed Scheme Compliance with NPPF
	155. Certain other forms of development are also not inappropriate in the Green Belt provided they preserve its openness and do not conflict with the purposes of including land within it. These are:	
	a) mineral extraction;	
	b) engineering operations;	
	c) local transport infrastructure which can demonstrate a requirement for a Green Belt location;	
	d) the re-use of buildings provided that the buildings are of permanent and substantial construction;	
	e) material changes in the use of land (such as changes of use for outdoor sport or recreation, or for cemeteries and burial grounds); and	
	f) development, including buildings, brought forward under a Community Right to Build Order or Neighbourhood Development Order.	
	156. When located in the Green Belt, elements of many renewable energy projects will comprise inappropriate development. In such cases developers will need to demonstrate very special circumstances if projects are to proceed. Such very special circumstances may include the wider environmental benefits associated with increased production of energy from renewable sources.	
14. Meeting the challenge of climate change, flooding and coastal change	reductions in greenhouse gas emissions, minimise vulnerability and improve resilience; encourage the reuse of existing resources, including	<u>In response to paras <math>157 - 163</math></u> : The Applicant considers that the contributes to meeting the UK's Net Zero 2050 target. 	development should be made safe for its lifetime without increasing flood risk elsewhere.	<b>ES (Document Reference 6.3)</b> prepared for the Proposed Scher measures (including floodplain compensation). Since, mitigation into the Proposed Scheme, therefore, no significant effects on the are anticipated.
	168. The aim of the sequential test is to steer new development to areas with the lowest risk of flooding from any source. Development should not be allocated or permitted if there are reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding. The strategic flood risk assessment will provide the basis for applying this test. The sequential approach should be used in areas known to be at risk now or in the future from any form of flooding.	In response to para 175: An <b>Outline Drainage Strategy (Docum</b> prepared and secured through a requirement in Schedule 2 of the <b>3.1)</b> , which ensures that foul and surface water drainage has bee design. This complies with national and local policies relevant to spatial planning across the Proposed Scheme. It also considers to generated by the Carbon Capture Facility (associated with process The Outling Drainage Strategy (Decument Defense 7.2) will
	169. If it is not possible for development to be located in areas with a lower risk of flooding (taking into account wider sustainable development objectives), the exception test may have to be applied. The need for the exception test will depend on the potential vulnerability of the site and of the development proposed, in line with the Flood Risk Vulnerability Classification set out in Annex 3.	The <b>Outline Drainage Strategy (Document Reference 7.2)</b> will design that will be undertaken at the detailed design stage of the the detailed drainage strategy brought forward for approval and a Schedule 2 of the <b>Draft DCO (Document Reference 3.1)</b> . <b>This demonstrates that the Proposed Scheme complies with</b> <b>of climate change, flooding and coastal change.</b>
	170. The application of the exception test should be informed by a strategic or site specific flood risk assessment, depending on whether it is being applied during plan production or at the application stage. To pass the exception test it should be demonstrated that:	
	a) the development would provide wider sustainability benefits to the community that outweigh the flood risk; and	
	b) the development will be safe for its lifetime taking account of the vulnerability of its users, without increasing flood risk elsewhere, and, where possible, will reduce flood risk overall.	
	171. Both elements of the exception test should be satisfied for development to be allocated or permitted.	
	172. Where planning applications come forward on sites allocated in the development plan through the sequential test, Applicants need not apply the sequential test again. However, the exception test may need to be

Policy	Policy Text	Proposed Scheme Compliance with NPPF
	c) sites identified, or required, as compensatory measures for adverse effects on habitats sites, potential Special Protection Areas, possible Special Areas of Conservation, and listed or proposed Ramsar sites.	This demonstrates that the Proposed Scheme complies with enhancing the natural environment.
	188. The presumption in favour of sustainable development does not apply where the plan or project is likely to have a significant effect on a habitats site (either alone or in combination with other plans or projects), unless an appropriate assessment has concluded that the plan or project will not adversely affect the integrity of the habitats site.	
	Ground conditions and pollution	
	189. Planning policies and decisions should ensure that:	
	<ul> <li>a) a site is suitable for its proposed use taking account of ground conditions and any risks arising from land instability and contamination. This includes risks arising from natural hazards or former activities such as mining, and any proposals for mitigation including land remediation (as well as potential impacts on the natural environment arising from that remediation);</li> </ul>	
	<ul> <li>b) after remediation, as a minimum, land should not be capable of being determined as contaminated land under Part IIA of the Environmental Protection Act 1990; and</li> </ul>	
	c) adequate site investigation information, prepared by a competent person, is available to inform these assessments.	
	190. Where a site is affected by contamination or land stability issues, responsibility for securing a safe development rests with the developer and/or landowner.	
	191. Planning policies and decisions should also ensure that new development is appropriate for its location taking into account the likely effects (including cumulative effects) of pollution on health, living conditions and the natural environment, as well as the potential sensitivity of the site or the wider area to impacts that could arise from the development. In doing so they should:	

ith Policy 15. Conserving and

# January 2024

Policy	Policy Text	Proposed Scheme Compliance with NPPF
	<ul> <li>a) mitigate and reduce to a minimum potential adverse impacts resulting from noise from new development – and avoid noise giving rise to significant adverse impacts on health and the quality of life;</li> </ul>	
	b) identify and protect tranquil areas which have remained relatively undisturbed by noise and are prized for their recreational and amenity value for this reason; and c) limit the impact of light pollution from artificial light on local amenity, intrinsically dark landscapes and nature conservation.	
	192. Planning policies and decisions should sustain and contribute towards compliance with relevant limit values or national objectives for pollutants, taking into account the presence of Air Quality Management Areas and Clean Air Zones, and the cumulative impacts from individual sites in local areas. Opportunities to improve air quality or mitigate impacts should be identified, such as through traffic and travel management, and green infrastructure provision and enhancement. So far as possible these opportunities should be considered at the plan-making stage, to ensure a strategic approach and limit the need for issues to be reconsidered when determining individual applications. Planning decisions should ensure that any new development in Air Quality Management Areas and Clean Air Zones is consistent with the local air quality action plan.	
	193. Planning policies and decisions should ensure that new development can be integrated effectively with existing businesses and community facilities (such as places of worship, pubs, music venues and sports clubs). Existing businesses and facilities should not have unreasonable restrictions placed on them as a result of development permitted after they were established. Where the operation of an existing business or community facility could have a significant adverse effect on new development (including changes of use) in its vicinity, the Applicant (or 'agent of change') should be required to provide suitable mitigation before the development has been completed.	
	194. The focus of planning policies and decisions should be on whether proposed development is an acceptable use of land, rather than the control of processes or emissions (where these are subject to separate pollution	

Page 170 of 262

#### January 2024

Policy	Policy Text	Proposed Scheme Compliance with NPPF
	control regimes). Planning decisions should assume that these regimes will operate effectively. Equally, where a planning decision has been made on a particular development, the planning issues should not be revisited through the permitting regimes operated by pollution control authorities	
16. Conserving and enhancing the historic environment	195. Heritage assets range from sites and buildings of local historic value to those of the highest significance, such as World Heritage Sites which are internationally recognised to be of Outstanding Universal Value. These assets are an irreplaceable resource, and should be conserved in a manner appropriate to their significance, so that they can be enjoyed for their contribution to the quality of life of existing and future generations. <b>Proposals affecting heritage assets</b>	In response to paras 195 – 213: Chapter 9: Historic Environm (Document Reference 6.1) provides and assessment of the eff Historic Environment. Crossness Conservation Area is located a Order Limits. The Historic Environment assesses the impact of to or potential buried heritage assets (archaeological and paleoenv ground heritage assets (structures and landscapes of heritage in the Proposed Scheme. It also includes, where appropriate, the s and how they are understood and appreciated. The location of the Environmental Features Plan Sheet 4: Heritage Features (Documental Scheme Construction)
	200. In determining applications, local planning authorities should require an Applicant to describe the significance of any heritage assets affected, including any contribution made by their setting. The level of detail should be proportionate to the assets' importance and no more than is sufficient to understand the potential impact of the proposal on their significance. As a minimum the relevant historic environment record should have been consulted and the heritage assets assessed using appropriate expertise where necessary. Where a site on which development is proposed includes, or has the potential to include, heritage assets with archaeological interest, local planning authorities should require developers to submit an appropriate desk-based assessment and, where necessary, a field evaluation.	The Belvedere Power Station Jetty (disused) is within the Order local importance. It is currently unknown if this asset will be lost demolished a Historic England Level 2 Historic Building Recordi that an accurate record of the Belvedere Power Station Jetty is a Archaeology Data Service for future research and understanding Belvedere Power Station (disused) may be retained (with modifi <b>Environment (Volume 1) of the ES (Document Reference 6.1</b> set out in the <b>Mitigation Schedule (Document Reference 7.8)</b> effects to heritage assets, either if Belvedere Power Station Jettr as part of the Proposed Scheme
	201. Local planning authorities should identify and assess the particular significance of any heritage asset that may be affected by a proposal (including by development affecting the setting of a heritage asset) taking account of the available evidence and any necessary expertise. They should take this into account when considering the impact of a proposal on a heritage asset, to avoid or minimise any conflict between the heritage asset's conservation and any aspect of the proposal.	The assessment concludes that despite no significant effects ide additional surveys and specific Written Scheme of Investigation secured through a requirement in Schedule 2 of the <b>Draft DCO</b> response to the operation phase, effects on paleoenvironmental additional design, mitigation or enhancement measures are prop through the construction phase measures. In addition, given the deeper than the original construction phase capital dredge, there submerged remains.

Policy	Policy Text	Proposed Scheme Compliance with NPPF
	202. Where there is evidence of deliberate neglect of, or damage to, a heritage asset, the deteriorated state of the heritage asset should not be taken into account in any decision.	The Applicant carried out early engagement with key stakeholder statutory consultation took place over a period of 6 weeks in Octo Engagement with key stakeholders, including those who specialis detail on the engagement and consultation activities carried out,
	203. In determining applications, local planning authorities should take account of:	Proposed Scheme can be found in the <b>Consultation Report (Do</b>
	a) the desirability of sustaining and enhancing the significance of heritage assets and putting them to viable uses consistent with their conservation;	Chapter 21: Cumulative Effects (Volume 1) of the ES (Document the Proposed Scheme is not predicted to result in any significant environment as a result of in-combination effects with other plans
	b) the positive contribution that conservation of heritage assets can make to sustainable communities including their economic vitality; and	
	c) the desirability of new development making a positive contribution to local character and distinctiveness.	This demonstrates that the Proposed Scheme complies with enhancing the historic environment.
	204. In considering any applications to remove or alter a historic statue, plaque, memorial or monument (whether listed or not), local planning authorities should have regard to the importance of their retention in situ and, where appropriate, of explaining their historic and social context rather than removal.	
	Considering potential impacts	
	205. When considering the impact of a proposed development on the significance of a designated heritage asset, great weight should be given to the asset's conservation (and the more important the asset, the greater the weight should be). This is irrespective of whether any potential harm amounts to substantial harm, total loss or less than substantial harm to its significance.	
	206. Any harm to, or loss of, the significance of a designated heritage asset (from its alteration or destruction, or from development within its setting), should require clear and convincing justification. Substantial harm to or loss of:	
	a) grade II listed buildings, or grade II registered parks or gardens, should be exceptional;	

lers on the Proposed Scheme, and ctober and November 2023. alise in historic assets, is ongoing. More t, and how feedback has influenced the **Document Reference 5.1)**.

Policy	Policy Text	Proposed Scheme Compliance with NPPF
	b) assets of the highest significance, notably scheduled monuments, protected wreck sites, registered battlefields, grade I and II* listed buildings, grade I and II* registered parks and gardens, and World Heritage Sites, should be wholly exceptional.	
	207. Where a proposed development will lead to substantial harm to (or total loss of significance of) a designated heritage asset, local planning authorities should refuse consent, unless it can be demonstrated that the substantial harm or total loss is necessary to achieve substantial public benefits that outweigh that harm or loss, or all of the following apply:	
	a) the nature of the heritage asset prevents all reasonable uses of the site; and	
	b) no viable use of the heritage asset itself can be found in the medium term through appropriate marketing that will enable its conservation; and	
	c) conservation by grant-funding or some form of not for profit, charitable or public ownership is demonstrably not possible; and	
	d) the harm or loss is outweighed by the benefit of bringing the site back into use.	
	208. Where a development proposal will lead to less than substantial harm to the significance of a designated heritage asset, this harm should be weighed against the public benefits of the proposal including, where appropriate, securing its optimum viable use.	
	209. The effect of an application on the significance of a non-designated heritage asset should be taken into account in determining the application. In weighing applications that directly or indirectly affect non-designated heritage assets, a balanced judgement will be required having regard to the scale of any harm or loss and the significance of the heritage asset.	
	213. Not all elements of a Conservation Area or World Heritage Site will necessarily contribute to its significance. Loss of a building (or other element) which makes a positive contribution to the significance of the Conservation Area or World Heritage Site should be treated either as	

National Planning Policy Framework January 2024			
	Policy	Policy Text	Proposed Scheme Compliance with NPPF
		substantial harm under paragraph 207 or less than substantial harm under paragraph 208, as appropriate, taking into account the relative significance of the element affected and its contribution to the significance of the Conservation Area or World Heritage Site as a whole.

	<ol> <li>reduce freight trips to, from and within these areas</li> <li>coordinate the provision of infrastructure and facilities to manage freight at an area-wide level</li> </ol>	
	3) reduce road danger, noise and emissions from freight, such as through the use of safer vehicles, sustainable last-mile schemes and the provision of rapid electric vehicle charging points for freight vehicles.	In response to Policy T7 (J): The planned output
	Such strategies should be developed through policy or through the formulation of a masterplan for a planning application.	Scheme are anticipated to be transported via the surrounding road network as a fundamental part marine vessels will call at the Proposed Jetty eac LCO <sub>2</sub> to meet the annual throughput. For constr steel piles, precast concrete units and marine eq will primarily be via the River Thames. <u>In response to Policy T7 (K):</u> A <b>Framework Con Plan (CTMP) (Document Reference 7.7)</b> has be Application, secured through a requirement in Sc <b>(Document Reference 3.1)</b> . It sets out potential effects, including the development of a CWTP. F CTMP will be developed once Contractor(s) have will be produced in accordance with local highwa Construction Logistics Planning (CLP) Guidance routes used by walkers and cyclists, including PF and NCN routes will remain open, where practica construction. For more information, refer to Chap Description (Volume 1) of the ES (Document I CoCP (Document Reference 7.4).
	<b>C</b> To support carbon-free travel from 2050, the provision of hydrogen refuelling stations and rapid electric vehicle charging points at logistics and industrial locations is supported.	
	<b>E</b> Consolidation and distribution sites at all scales should be designed to enable 24-hour operation to encourage and support out-of-peak deliveries.	
	<b>F</b> Development proposals for new consolidation and distribution facilities should be supported provided that they do not cause unacceptable impacts on London's strategic road networks and:	
	1) reduce road danger, noise and emissions from freight trips	
	2) enable sustainable last-mile movements, including by cycle and electric vehicle	
	3) deliver mode shift from road to water or rail where possible (without adversely impacting existing or planned passenger services).	
	<b>G</b> Development proposals should facilitate safe, clean, and efficient deliveries and servicing. Provision of adequate space for servicing, storage and deliveries should be made off-street, with on-street loading bays only used where this is not possible. Construction Logistics Plans and Delivery and Servicing Plans will be required and should be developed in accordance with Transport for London guidance and in a way which reflects the scale and complexities of	
	developments. <b>H</b> Developments should be designed and managed so that deliveries can be received outside of peak hours and in the evening or night time. Appropriate

Policy SP6: Managing Bexley's heritage assets.	<ol> <li>The Council will manage Bexley's heritage and archaeological assets, whilst seeking opportunities to make the most of these assets; including adapting to and mitigating the effects of climate change. This will enhance the local sense of place and support the revitalisation and development of the borough, including promoting the visitor economy. This will be achieved by:         <ul> <li>a. promoting the borough's heritage assets, such as Lesnes Abbey, Danson Mansion, Hall Place and Gardens, Crossness Beam Engine House and Red House;</li> <li>b. reviewing the status of existing and identifying new heritage and archaeological assets;</li> <li>c. applying the NPPF and London Plan requirements for development proposals affecting heritage assets to conserve and enhance the significance of heritage assets, their settings, and the wider historic environment, and the requirements to protect assets from development that is likely to adversely impact on the significance, integrity, character or appearance of those assets or their settings;</li> <li>d. protecting the internal features of Council owned non-designated heritage assets where they contribute to the asset's significance; and,</li> <li>e. supporting historic restoration schemes through partnership working and seeking funding to enhance and use heritage and archaeological assets in an appropriate and sympathetic manner.</li> </ul> </li> </ol>	In response to Policy SP6 para 1: Chapter 9 of the ES (Document Reference 6.1) report significant environmental effects of the Prop Environment during construction and operat assesses the impact of the Proposed Scheme heritage assets (archaeological and paleoen ground heritage assets (structures and lands immediately around the Proposed Scheme. the setting of significant heritage assets and appreciated. 	London Plan outer London standards rather than the Opportunity Area standards for outer London.	The above demonstrates that the Proposid DP23.
	2. Parking provision materially below London Plan maximum standards may be acceptable in areas that have a PTAL of $3 - 4$ , for residential development sites that are:	
	a. outside of a Controlled Parking Zone (CPZ) or Restricted Parking Zone (RPZ), where it can be demonstrated through a parking survey that there is sufficient on-street, off-site parking capacity within 200 metres of the development boundary; or	
	b. inside an existing or planned CPZ or RPZ, in which case, where parking surveys suggest issues will arise, the Applicant will normally be required to enter into a legal agreement to restrict future occupiers from obtaining on-street parking permits.	
	3. For residential developments of fewer than 10 units, where the spaces per dwelling calculation results in a fraction of a space, provision will be rounded up to the nearest whole space	
	4. For specialist housing for older people, a case by case approach will be taken with the London Plan residential parking standards used as a starting point and particular regard being had to the need for appropriate visitor and staff parking in the context of:	
	a. the public transport access levels in the relevant area; and	
	b. the characteristics of the residential care to be provided including the nature of shift patterns.	
	Such matters should be informed by a transport assessment and other appropriate information.	
	5. Parking for industrial development should be provided in line with projected operational need. Non-operational parking should be determined on a case by case basis using the London Plan office parking standards as a starting point and having regard to the nature of the use and locality. In both cases parking provision should be calculated via a transport assessment once Applicants have demonstrated they have
