

1, Why is this hearing in Lincoln? This is many miles from the site and very inconvenient for affected residents - many are elderly with limited mobility and a poor link into the city. Parking is also very expensive - venues closer are available with good facilities / free parking and better access.

2, The planning process for individuals is very onerous, fighting your way through the documents takes hours and many will cease taking their views forward!

3, The applications have been made in very quick succession because of this the time period to make representations has been shortened as they overlap each other

4, West Burton and Gate Burton I understand have been made by the same company - Island Green Power, why are these being viewed as 2 rather than 1 application. They will be connected together cables etc so they are 1?

5, Due to the levels of applications from around the country can it be confirmed that the inspectorate has enough resource to look at each application in depth with the correct level of investigation work?
