

Submission ID: 17582

I object to this proposal on the following grounds.

1. The cumulative effect of the 4 applications will devastate huge areas of natural beauty, destroy habitats, disrupt migration patterns and remove vital agricultural land from our community.
2. This project will take years to complete and is destined to be replaced by the Gate Burton Nuclear development in the long term. What will be the plan to deal with the obsolete panels, batteries, substations and infrastructure then?
3. There are ample brownfield sites that can be used for the generation of solar power that will not destroy agricultural land and threaten our food security.
4. There will be significant loss of jobs and consequent deskilling in the agricultural sector.
5. Lincolnshire's emerging tourism industry will be stifled by such a development.
