

The whole procedure for the public is discriminatory and totally unfair. It is far too complicated. This is 1 of 4 applications in this area all within 6 miles of each other. The developers have probably done this on purpose to liquidate the public opinion. How on earth are we supposed to keep track of what we are supposed to do when?

The developers have specialists dealing with this kind of thing. They are doing this all the time and are employing legal help. How on earth do you expect the public to be able to follow this complicated process??

Why are these meetings in the Lincoln City centre and not nearer the development area's?. This is very prohibitive to people who are working and the cost to park in Lincoln City is ridiculous. This will put people off standing up for themselves and being counted regarding this whole unfair and discriminatory process.

This developer Island Green Power has two proposals this one Gate Burton and WEst Burton. This is very confusing people think this is one. Why has this developer got two applications not one. As there are four developers all using the same solicitors and cable route and this amounts to 10,000 acres why is this not being looked at as one?

Having this examination process through the summer period when people are on holiday is ridiculous. This will run through parents having kids off school and people going on holiday, Again this is not giving the public a chance to have their say?

Also with circa 9 NSIP projects in Lincolnshire both the district council and the county council do not have enough staff to be able to deal with these applications and give them the attention to detail that is required. This again makes this whole process discriminatory for the public and the communities of the area's involved and makes this process completely unfair. The whole process is being run without giving enough time for this process to be looked at in the detail that is required.
