

Submission ID: 17700

This whole project along with the other 4 is totally in the wrong place.

This cannot be hidden from the view of any of the 30 villages and Gate Burton will be seen all the way along the corridor of the Lincoln Escarpment from Lincoln all the way to Gainsborough. The inspectorate should go and view as soon as possible the views along the historic escarpment and look down on the Cliff from both the Scampton Viewing Point and across the B1398 Between Ingham and Glentworth. You will see from this point all the way to both the Power station of Gate Burton & West Burton. This eye saw cannot be hidden. Including Gate Burton this will be a complete sea of solar panels with the other 3 proposals.

For this proposal I would also recommend you visit the Border lines of this proposal as it butts up to the villages to see how this will affect the neighbouring villages such as Marton & Gate Burton this project is far too close to neighbouring villages.

I would also recommend you visit the BESS sites to see how close they are to the neighbouring villages because of fire risks.

Take in the view and take note along the B1398 of all the different crops of these food producing fields as you look across the Jurassic Lincolnshire Escarpment
