Subject: Solar panels

Why are you even considering placing thousands of acres of 4metre high solar panels in our beautiful countryside where the fields feed the country and nature thrives!!!

We don't want or need the thousands of acres of solar industrial on our farmland or countryside. Put them on old disused airfields like Kirton lindsey or old raf bases where the concrete already exists!!!

It will break my heart to see these panels in the countryside. Why on farmland? In the beautiful countryside? Find other option please 🙏 for my children and my grandchildren.

We do not want solar panels covering the countryside on arable farmland. I have grown up in Glentworth and would be heartbroken if this goes ahead. How ridiculous to even consider putting 4m high solar panels on good fertile farmland which feeds the country.
