I am objecting in the strongest possible terms to this and the other three solar projects.

It seems the deadlines are coming thick and fast now and keeping up with them all is a time consuming and challenging task.

I wish to be involved in all aspects of this project and process. I'm not sure what I'm supposed to add to this request as it is so difficult to understand it all which is why the four applications should definitely be heard together.

The projects are ill conceived and totally monstrous to take good farmland and pave it over for generations to come. This is money making pure and simple and has no basis in actually producing a viable energy supply for this country.

I'm sure there are many more points I'm supposed to make but actually I have a living to make too so whatever I've missed please consider that I did not intend to do so.

Yours faithfully

Sue Bingham
