

I wish to vehemently oppose the development for the reasons of wholesale wildlife habitat destruction, the decommissioning of active and productive farmland during a food shortage crisis caused by foreign despots, the concerns over massive battery storage facilities bursting into flames and the irreparable change in the countryside around our local communities.

When you consider the other huge solar developments planned for the area it would mean the majority of the Lincolnshire side of the Trent valley would consist of predominantly solar panels not farmland as it is at this moment in time.
