

I would like to state again that these 4 solar farm projects should be considered as one. As a resident affected by these farms, it is very confusing to keep distinguishing between each project and where they are in relation to my property, and the views which I enjoy, and purchased my property to obtain. I wish to stress the significance of the area which these solar farms will cover will be a huge blight on the countryside and spoil the area when there are more suitable sites available next to motorways and on brownfield sites and rooftops. I would also like to state how un-environmentally friendly solar panels on this scale are to not only manufacture but also that there are currently very few ways to recycle panels on this scale when they come to the end of their life span.

The lease of the land for 40 odd years means that I will not see the beautiful views I currently have and moved here from Kent for in my lifetime ever again. They will be a permanent scar on what is a wildlife-rich landscape and is enjoyed as a means to aid mental health and as recreation for the local communities.
