

I am opposed to these developments on a number of grounds - :

1. I challenge how 'green' and environmentally friendly this scheme really is? Is it really 'low carbon' bringing ship loads of solar panels from China having mined rare earth metals all over the world to manufacture them??
2. The developer claims that hedges will screen the 800,000+ solar panels that are going to occupy our countryside. Security cameras - fencing and screening sounds more like a prison than a haven for cycling and walking. We are going to live in this for the rest of our lives and our children's lives too.
3. I cannot believe that our flora and fauna are going to be preserved in any way with all this industrial development on prime agricultural land currently producing food for our nation.
4. What is this really achieving in terms of energy security for UK PLC? When we really need power - in cold dull winters, these will provide very little indeed and we still have to maintain conventional power stations or nuclear to be in reserve when the wind doesn't blow or the sun doesn't shine - like at night!
5. This is the wrong project in the wrong location. The blitz of applications in the same area by large professional corporations - all at the same time, makes it very difficult for local residents to track and keep up with, never mind keep pace with objections.
