I am opposed to all the planned solar farms in Lincolnshire, which are all interconnected.

These proposals would lead to a significant loss of agricultural land and agricultural production, leaving the country, even more dependent upon imports, which in turn will have an impact on carbon footprint.

These proposals will have a massive impact upon population health and well-being, with levels of anxiety and depression increasing in the local community. (These are already having a serious effect).

The noise levels calculated by the developers are massively understated and not independently verified.

Increased levels of traffic during the construction period would be appalling.

There will be a massive impact upon the local wildlife and environment.
