

My submission.

The proposal to create this huge solar park is fundamentally flawed. All this land has good growing potential, this government should be maximising agricultural space for food production instead of taking it for this inefficient form of power generation.

By continuing with these proposals, the grid connection which could be used for small nuclear is being blocked.

No thought has been to the mental health of the communities affected by these proposals. They will result in an industrial landscape, the like of which hasn't been experienced anywhere in the world. This will condemn the countryside in this area for generations to come.

The roads and general infrastructure in this area won't be able to support the massive input of logistics this proposal will require.

Account should be taken of the wishes of people living not only in the affected area, but also in the wider surrounding area. The lanes and by-ways of this area are enjoyed by many people in lots of different ways. Be it cycling, walking, horse riding or just a trip out to a rural landscape. All this will be lost as we are left to gaze on fields of sterile panels behind high fencing. We just don't want them.

William Rose
