

Our communities are being placed under intolerable stress and worry about the future of our farmland and food production, our environment, our safety and health and wellbeing under the threat of multiple applications in this area for solar industrialisation of our rural landscape. I have submitted relevant representations for all the schemes and I am vehemently opposed to them all.

The multiple schemes are confusing and take considerable time and effort to keep up with and now we are expected to travel into Lincoln to fight for our freedoms.

These proposals do not have any basis in a plan for green energy. They are profiteering pure and simple. I'm appalled that the Government should be encouraging such schemes and I shall do my utmost to fight them all every inch of the way. Solar should be on rooftops not on farmland in rural areas. These projects will be sold out to foreign investors and our countryside and communities will be destroyed.
