Categories: EO

Dear Louise & Georgie

I have checked the position with Will Bridges the development manager for RES' Sturton Solar Scheme regarding your question on progress on a cooperation agreement, setting out how each developer would act to ensure any conflicts are minimised so that the two projects can co-exist.

Will Bridges (who I have copied into this email) has confirmed on 23rd October 2024: "I sent IGP comments on their Cooperation agreement on the 1st August 2024 and haven't received anything back as yet."

Whilst writing I would also bring to your attention that we have not had substantive response from IGP addressing our client's concerns in relation to the easement agreement for the cable running through our client's land, and connecting into West Burton Power Station. Our last contact with IGP to reach a negotiated position with them was on 19th September 2024 (in relation the commercial terms we had sent to them under cover of our email dated 23rd March 2023). To date we have not had any response from them.

We would be happy to elaborate further on any specific points arising.

Kind regards

Jeremy

Jeremy Dawson
