Subject: combined impact of all projects

Dear All

Wishing you a happy new year.

Every time I seem to talk to a project, they assure me that they are talking to other projects but it would appear that they do not talk to themselves.

Back months ago, I remember emailing about the verges which were left in a mess. Vus tidied the area in front of the substation, the even graded it and laid topsoil and National grid dug it up 2 days later.

Why am I telling you this?

Well, this Saturday I believe the quarry road was surfaced. The company doing the work is part of Aggregate industries who are the quarry tenants. Aggregate industries have assured me on many occasions that no vehicle will park down the lane or on the main road. But once again they didn't talk to each other. There were wagons down the lane and queuing up on the main road, which is against they planning criteria.

After the event I have messaged Rhobert, Quarry Manager, about the breaking of planning on Saturday. But once again it will be looked into and not monitored at the time it is happening.

Who is watching what the projects are doing? In this case no one.

I continue to ask will someone look at the combined impact of all the projects.

This weekend it has rained constantly and the fields and even houses have been flooded. One flooded house is from water from the land behind it, The land has been passed for a small solar farm. The water went in their kitchen and out the front door. It has taken her half a day to try and find out whose land it is and dyke which has over flowed. But in reality does anyone of the projects care. I think not. If you walked the land and looked at the amount of water sat in the fields and the catchment drains which are running nearly to the top of them. You would see that water is a great problem in the fields. Each project has their own agenda without thought of the impact on others.

Walk the land with me. You will see it through a dog walkers' eyes.

Months ago, I had a soak away put in at the side of the bungalow by EDF. At the time I said that the water had moved further up the wall and into my garden at the top of it and under the wall. Apparently, something was blocked off and it seemed to stop. It has been great for a few months but not anymore. The water is running down my drive and out of the gate as well as under the wall. The soak away is not working it has just pushed the water into my garden at a different place.. Also, in front of the bungalow there is standing water. My lawn is 3 inches under water and I believe this has stop the water reaching the bungalow. You're going to say it's been raining like the man from Bassetlaw Planning committee. I understand that but when something has been done to stop something that has been happening for years doesn't work then what was the point in doing it.

Well, I've ranted long enough but I will be back.

My new year has not been a good one so far with the projects and it only day 6. I'm sure it will get better and someone I email will answer me and have some answers to the problems and the destruction of the land around our villages.
I wait with bated breath.

Kind Regards

Christine Warren
