

The proposed solar panel project will deface and destroy the countryside for generations if not forever.

The scale is so large that it will turn the area into an industrial wasteland.

Acres of green field countryside will be destroyed which is bad for our well-being, will destroy recreational pleasures such as walking and cycling and will take away valuable farmland which I submit is needed now more than ever due to the war in Ukraine,

The solar panels themselves are huge. Transporting them and the ancillary equipment needed will cause damage to housing and existing infrastructure.

Why is this part of Lincolnshire being treated as a dumping ground? A beautiful landscape will be changed beyond recognition. The scale of the project..over 15,000 acres is disproportionate.
