

I am not sure what the solar developer is expecting to achieve by the submission of aerial footage C8.2.12, it shows combined images of 4 solar farm proposals in a way that beggars belief.

This beautiful, tranquil and unspoilt agricultural landscape below the Jurassic cliff road would become an oppressive wilderness of solar paraphernalia not fit for a habitation.

Is the video meant to show how the solar plant will somehow enhance the countryside? I think it is a "nail in the coffin" for solar support. Do these companies really think this is acceptable for rural communities. It will be all solar farms around here; people live in the countryside for a reason, and this is not it.

It is all too much!
